FOR J. TAYLOR, AT THE ARCHITECTURAL LIBRARY, 59, HIGH HOLBORN.

1809.

## PREFACE.

THE following work is printed conformably to a desire expressed by the Author at his death: and his friends, in the execution of this duty, have proceeded under the conviction that it is far too valuable to be withheld from the press. Notwithstanding this favourable opinion, they are sensible that to the faults which may be inherent in the work itself, must be added those which are inseparable from publications of a posthumous nature; many such may possibly be discovered, which in the eye of candour will admit of extenuation. The unfinished state, however, of the following pages, and the premature death of their writer, appear to render necessary some prefatory information concerning both; in order that the proposed plan and objects of the work may be more clearly understood, and the qualifications possessed by the author for such an undertaking duly appreciated.

The History of the Ecclesiastical Architecture of France occupied, at intervals, the last four years of the author's life. The first project of such a work, originated in the course of an extensive journey made with me through France and Italy in the years 1802 and 1803, during which he examined with minute attention the chief remains of early christian buildings in those countries. His previous study and knowledge of

Gothic architecture enabled him to do this with accuracy and effect: on his return to England in the summer of the last-mentioned year, he began to arrange and digest the materials which he had collected, and the observations which he had made during his journey abroad. His design, in its first conception, was limited to a refutation, from the history of existing monuments, of an hypothesis maintained by several writers and supported by the Society of Antiquaries, that the style usually called Gothic, really originated in this island, and ought therefore in future to receive the denomination of English architecture. From the various and extensive information which he obtained in the course of his inquiries into this subject, it was thought more expedient so to change the plan of the work, as to make it comprise, in a history of the rise and progress of the style in France, a detailed account of the most remarkable Gothic edifices in that country, with the view likewise of illustrating its origin and first introduction into Europe. By this alteration, that which had formerly been the principal aim of the undertaking, became only incidental to its completion, and a more ample field was opened for a display of the industry and talents of the author.

This more extended project was divided into three parts, of which two only are finished, and now published; the first containing a review of the early christian buildings, and a general history of ecclesiastical architecture in France; and the second, a particular description of the edifices themselves. In these detached portions of the work, however incomplete

they may be found, many new and interesting facts will be presented to the followers of architectural studies, and much general knowledge of these subjects will be obtained from their perusal. The religious structures of the first christians, with the changes attendant on the growing wealth and dignity of the hierarchy, are, I believe, for the first time presented to the English reader. In the course of a luminous view of the rise and progress of the Gothic style in France, many important dates are ascertained, and historical notices afforded respecting artists and their works, little known before, but highly necessary to a due illustration of the science. A comparison is instituted between the contemporary buildings of France and England, and their characteristic differences are pointed out. The prior excellence of the French style is clearly shewn, and the hypothesis, which it was a main object of the essay to combat, is entirely disproved by the result.

The third division, of which unfortunately nothing remains, would have comprehended, amongst other matter of less import, ‘An Inquiry into the Origin of Gothic Architecture.’ The absence of this part is the more peculiarly to be regretted, as it would have led to the discussion of topics incomparably more interesting; and amidst the various and contradictory speculations entertained on the subject, it would have furnished an occasion requisite for the full exercise of that knowledge and accuracy of judgment which the author possessed. Notwithstanding this loss, I am, however, enabled to add his opinion, transcribed from another place, and which, although

summarily given, entirely coincides with that which has always appeared to me, to be the supposition most consonant with reason and probability.

“In the twelfth century a new character of building suddenly appeared and spread itself over the greater part of Christendom. This has in latter times been called the Gothic style, out of a silly contempt, though it did not arise till long after the Goths were melted down and lost among the nations of Europe. It has not the most distant similarity either to Grecian or Roman architecture, and its origin has been the subject of much controversy. I am of opinion that it is of eastern extraction, and that it was imported by the Crusaders into the west. All eastern buildings as far back as they go (and we cannot tell how far,) have pointed arches and are in the same style; is it not fair to suppose that some of these are older than the twelfth century, or that the same style existed before that time? Is it at all probable that the dark ages of the west should have given a mode of architecture to the east? I conceive therefore that the Crusaders introduced the fashion of the pointed arch and the first ornaments of the style, which are few, and simple; but the richness it gathered in process of time, and the improvements and alterations we observe in it from its first rise in the twelfth, to its extinction in the fifteenth century, are owing to the munificent encouragement of the church, and the vast abilities of the freemasons of the middle ages. These scientific persons have great claim to our admiration from the richness and fertility of their inventive

powers; by them this eastern style was transplanted into the west, and under them it was so much altered and amplified, that it assumed almost an entirely new appearance, from which circumstance the confusion and uncertainty which prevails respecting its origin has for the most part arisen."

Without entering at any length into the discussion of this subject, or still less examining the various hypotheses by which the primary invention of Gothic architecture has been explained with more ingenuity than apparent truth, a few observations tending to confirm the probability of the above statement respecting the mode of its introduction into the west, may perhaps be permitted.

Those who imagine with many writers that the style received its origin in Europe from the observation of the intermingled branches of lofty avenues,<sup>a</sup> the intersection of circular arches,<sup>b</sup> or who think with Mr. Walpole<sup>c</sup> that it arose solely from what was conceived to be an improvement in the corrupt specimens of Roman taste then exhibited, and was afterwards gradually carried to perfection, all seem to err in this; their views are confined to the form of the arch: if any plausible reason can be assigned for such a peculiarity, the difficulty is supposed to be overcome and no farther inquiry necessary. This however is not the case; the pointed arch is unquestionably one of the striking characteristics of Gothic architecture, but there are other component features equally indispensable to its formation. We may refer to the inherent

<sup>a</sup> Warburton on Pope.

<sup>b</sup> Milner Hist. of Winchest. Vol. 2

<sup>c</sup> Anecd. of Paint. c. v.

ornaments of the style, however few and simple they may be, but above all, to the lofty and slender proportions so generally observed in the erection of these edifices.

That the species of building which we call Saxon, or Anglo-Norman, and of which this island possesses the most magnificent examples, was in fact intended as an imitation of Roman architecture, cannot be doubted: it is sufficiently proved by a close resemblance both in ornament and design to the structures of the later Emperors, which resemblance is especially to be remarked in works of this nature in Italy, where the models were more obviously presented to the attention of the artists.

If, therefore, we could discover in any one country a gradual alteration of this style, beginning with the form of the arch, and progressively extending to the whole of the ornaments and general design: after which, if we could trace the new fashion slowly making its way, and by degrees adopted by the other nations of Europe, the supposition of Mr. Walpole would be greatly confirmed. Nothing of this however is the case. We find the Gothic style, notwithstanding the richness and variety it afterwards assumed, appearing at once with all its distinctive marks and features: not among one people, but very nearly at the same period of time, received and practised throughout Christendom. How will it be possible to account for this general and contemporary adoption of the style but by a supposition that the taste and knowledge of all on this subject were drawn from a common source: and where

can we look for this source but to the east, which during the Crusades, attracted a portion of the population, and in a great degree occupied the attention of the different states of Europe?<sup>a</sup> This result receives confirmation from the circumstance of there being no specimen of Gothic architecture erected in the west before the period in question. Nevertheless in the statement of this fact it is necessary to except the occurrence, however rare, of pointed arches the date of whose construction may perhaps be placed higher than the twelfth century. Such instances indeed are mentioned in the course of the following work, and the cause of their existence will be there satisfactorily explained. It may be sufficient here to observe, that no people versed in the science of architecture could long remain ignorant of the pointed form of the arch, the most simple and easy in construction, as it might be raised without a centre by the gradual projection of stones placed in horizontal courses, and whether produced by accident or necessity, we may reasonably expect to meet with it occasionally in their works. Accordingly it is proved from actual remains, that the antients were by no means unacquainted with this mode of building, although it was neglected by them in their general practice. The insulated appearance of an arch merely pointed, without the addition of any other characteristic of the style, is not a better argument for the preva-

<sup>a</sup> Sir Christopher Wren has in a great measure adopted this opinion, although he appears chiefly to ascribe the origin of the style to the Moors of Spain. Parental.

lence of Gothic architecture, than if we should affirm, from the Corinthian capitals which are sometimes to be found in the Gothic cathedrals, that these merited the appellation of classical structures.

\*It has been repeatedly asked in what part of the east we are able to discover buildings constructed in the style alluded to, and of a date anterior to the erection of those in the west? It is certainly not so easy to answer this demand as the preceding observations would seem to warrant; at the same time, a little attention will explain the cause of hesitation, and I think lead us to a satisfactory conclusion.

I. It is impossible that the scantiness of authentic record of particulars relating to these subjects amongst oriental nations, should not be felt by all, and the difficulty of attaining to a knowledge of such as may exist, by most of those who engage in this or any similar inquiry.

II. It is to be remarked, that so frequent and destructive have been the wars and revolutions of the east, as but too often to entail the same fate on works of art and utility which attended the princes and chiefs of the states subverted. This must of necessity greatly diminish the number of architectural specimens, especially those of early date.

III. We may observe, that the people of the east with whom we are best acquainted, sacrificed, in a considerable degree, their peculiar and less durable mode of building, to that which they found adopted and established by the Greeks.

\* Bentham's Hist. of Ely Cath. § 5.      Grose's Antiquit. of England. Pref.

Thus, after the conquest of Constantinople, every mosque was constructed in imitation of the church of Santa Sophia: and the massive pile of Justinian, with the addition of their own lofty and slender minarets, has served as a model in the exercise of the piety and magnificence of each succeeding Sultan. Before the conquest of the metropolis the same practice seems to have been prevalent; and in their previous acquisition of many cities of the empire, the Christian edifices were converted to the purposes of Mahomedan worship.—Notwithstanding the operation of these and other causes which contribute to form the chief impediment to the possession of full information respecting the early state of architecture in the east, there appear still to exist facts abundantly sufficient to render the notion here contended for highly probable in the eyes of those who are content to view it without the medium of prejudice or established system.

If a line be drawn from the north of the Euxine, through Constantinople to Ægypt, we shall discover in every country to the eastward of this boundary frequent examples of the pointed arch, accompanied with the slender proportions of Gothic architecture. In Asia Minor, Syria, Arabia, Persia; from the neighbourhood of the Caspian, through the wilds of Tartary; in the various kingdoms, and throughout the whole extent of India, and even to the furthest limits of China: it is true, that we are unable for the most part to ascertain the precise dates of these buildings; but this in reality is not very important, it being sufficient to state the fact of their

comparative antiquity: which joined to the vast diffusion of the style, appears adequate to justify our conclusion. Seeing then the universal prevalence of this mode in the east, which is satisfactorily accounted for by the extensive revolutions and conquests effected by eastern warriors in that part of the world, it can scarcely appear requisite to discuss the probability of its having been introduced from the west, or still less, further to refute the notions of those who refer the origin of the style to the invention of English artists. Had it been adopted from the practice of the west, such a peculiarity of taste and knowledge must have been imparted by some general communication: this has only occurred at one period, during which no building of the species in question existed in Europe. The inhabitants of the west could not convey a knowledge which they did not possess; but as it became pretty general amongst them shortly after the epoch alluded to, it is reasonable to infer that they acquired it from those nations whom they are said to have instructed.

On the whole, it is probable that the origin of the Gothic style, notwithstanding the occasional imitation of a corrupt and degraded species of Roman architecture, is sufficiently indicated by the lofty and slender proportions, by the minute parts, and the fantastic ornaments of Oriental taste.

Having given a summary of the work, and pointed out the different objects embraced in its design, something yet remains to be added respecting the author. However strong may be the temptation to dwell on the execution of this part

of my duty, it cannot be desirable long to detain the reader by a recital of virtues unknown, and of talents unexercised in public; or to expatiate on the life of an individual, concerning whom no general interest has been excited by exalted station or distinguished actions. Private worth can but claim private acknowledgement; and after all, the testimony of a friend to such a character, will be regarded at least with suspicion. Yet it is not unfit that all who peruse the following pages in their present state, should be aware of the extent to which their writer was calculated to engage in such a pursuit, and to perform the task which he had prescribed to himself.

The author of this Historical Survey died on the 24th of July, 1807, at the age of twenty-six years. Educated at Eton, he there acquired a love of classical literature, and a distinguished correctness of taste, which tempered his keen relish for all works of imagination. During a subsequent residence at Cambridge, without deeply engaging in the studies peculiar to the place, the advances which he made in different branches of learning were rapid and extensive. To the following work, therefore, he brought a cultivated mind, confirmed habits of industry, a most retentive memory, and a freedom from prejudice and pre-established opinion all his own. Before the publication of this survey nothing has appeared with the sanction of his name, excepting only a prize essay on the internal evidences of Christianity, written while an under graduate at the University. This little composition is to be admired for that display of good sense, moderation, and liberality of

sentiment, which seldom fails to confer on works of this description the charm of truth.

These productions may perhaps seem insufficient to justify what has already been said of the extent of his mental powers; had his life, however, been spared, there is no doubt that his industry would shortly have enabled him to accomplish those literary undertakings of general interest and importance, which he had for some time meditated.

To affirm generally that his talents and acquirements were equal to his virtues, would be to place them on a scale of excellence, to which even party zeal and private friendship have scarcely ventured to raise those of any individual; the persons, however, who were best acquainted with the native modesty and candour of his mind, will be the best enabled to appreciate their variety and extent.

Although his virtues might defy even the exaggerations of friendship, I shall proceed no further in their enumeration. For those who are alike indifferent as to the author or his character, too much may already have been said: and by all who knew both intimately, that which might here be added would probably be found insufficient to express a just sense of his excellence.

Quo nunquam pietas nisi rara, fidesque  
Altus amor veri, et purum spirabat honestum.

Respecting the fate of the following pages, I entertain no apprehension. The subject is not in itself very generally interesting, nor, from the accurate and detailed manner in which

it is treated, can we reasonably expect that it should be rendered more popular: but to all who have made Gothic architecture an object of attention and inquiry, this work cannot but prove acceptable, from the curious and authentic information which it contains, and from the manner in which it is afforded. From all such readers, notwithstanding the state in which it is unavoidably presented to the public, we may confidently anticipate an acknowledgement of its being highly creditable to the industry, the acuteness, and the candour of its Author.

ABERDEEN.

CHAP. I.

THE CHURCHES OF CONSTANTINE.

Decay of the Roman Arts—Palace of Dioclesian—Form of the ancient Basilicæ—Conjecture respecting the Church of S<sup>ta</sup>. Croce.—The Introduction of Transepts—Shape and Distribution of the first Christian Churches—degraded State of Architecture.

It has been remarked that the more we examine the edifices which remain of ancient Rome, and compare them with the testimonies of historians, the more we shall be confirmed in this general reflection, that the national taste followed the progress of national manners, and became successively grand, magnificent, gaudy, and barbarous.\* A very little inquiry

\* Barthelemy Mem. sur les Anc. Monumens de Rome. Ap. Voy. en Italie.—No. IX. p. 349.

will render the truth of this observation sufficiently apparent. The flourishing æra of Roman architecture has been commonly allowed to extend from the accession of Augustus to the age of Hadrian and the Antonines; but in its progress during that period, the simplicity of its Grecian original was gradually corrupted by an increased love of ornament, and its decline immediately afterwards was still more visible and rapid. The palace of Dioclesian, at Spalatro, affords a striking proof of the debasement of the art at the end of the third century:<sup>a</sup> indeed in many parts of that vast and costly structure are to be discovered the first traces of that barbarous style of building which is now known to us by the names of Lombard and Saxon.

The establishment of Christianity by Constantine, was followed by the foundation of churches in all the provinces of the empire, which occasioned a wide diffusion of the mode of architecture at that time prevalent at Rome; but we must lament that previous to this event, the taste as well as skill of the Romans, had undergone a further deterioration, and the disorders which produced this change still continuing to affect

<sup>a</sup> Fortis Viaggio in Dalmazia, p. 40.—Gibbon Hist. I. xiii. 391.

<sup>b</sup> Appendix A.

society, we shall observe in the buildings of Italy, during the six succeeding centuries, increased marks of rudeness and ignorance.

Constantine founded several churches at Rome, Byzantium, and in other places, but we are unable to refer to any perfect example of the manner of building practised in his reign, as most of them have been rebuilt, and the rest entirely altered. It is certain, however, from the descriptions of them, that they were constructed on the model of the Roman Basilicæ,<sup>a</sup> which were particularly calculated to receive great crowds of people; and it is probable that some of these buildings were devoted by him and his successors to the purposes of Christian worship.<sup>b</sup>

A conjecture has been entertained, from an accurate inspection made towards the close of the seventeenth century, of the church of Santa Croce at Jerusalem, the only specimen remaining of the architecture of Constantine, that the Basilicæ which that emperor erected for the Christians, like the buildings from which they were copied, were open at the sides.<sup>c</sup>

<sup>a</sup> There were, according to Victor, nineteen Basilicæ at Rome which were used as Courts of Justice and Exchanges of Merchants.

<sup>b</sup> Appendix B.

<sup>c</sup> Appendix C.

The ancient walls of the church of S<sup>a</sup>. Croce at that time consisted of two ranges of wide arches, one over the other, which at a subsequent period had been filled up with materials different from the original structure.<sup>a</sup> Each of the apertures of the upper range, which served as windows, were divided by a slender marble pillar into two smaller arches.<sup>b</sup> It must be remarked that the descriptions of Constantine's churches represent them as being particularly light;<sup>c</sup> we know also that the Basilicæ, from which they were copied, had open porticoes on each side; it may not therefore be improbable that some of the first Christian churches had open arcades, and were similar to their models in this respect, as well as in shape. But if such an arrangement ever did exist, it did not long continue; the church of St. Paul without the walls of Rome, was built in its present form under Valentinian, Theodosius, and Arcadius,<sup>d</sup> at the end of the fourth century: it is

<sup>a</sup> See Appendix D.

<sup>b</sup> *Antea diximus guinas fenestras in singulis lateribus obtinere, latas palm. 20. altas 40. harum unica tamen hodie priscam retinet amplitudinem et a columna marmorea bifariam dividitur.* Vet. Mon. cix. p. 76. a Roman Palm contains  $10\frac{3}{8}$  inches.

<sup>d</sup> See their Letter to Sallustius, præfect of Rome. Ciampini de Sac. Œd. c. v p. 110. also Vet. mon. c. 1. p. 10 & cxxiv.

entirely enclosed with walls, the windows are small, and the disposition of the ground plan alone, (with the exception of the transept which was introduced at this period,<sup>a</sup>) is borrowed from the ancient Basilicæ.

New churches were founded at Rome and Ravenna, and many of those erected by Constantine, rebuilt during the fifth century; they are all constructed on the same plan,<sup>b</sup> and are equally remarkable for deficiency of taste and meanness of execution. The Senate of Rome had given the first example of plundering ancient monuments to adorn the arch which they erected in honour of Constantine;<sup>c</sup> the early Christians zealously pursued the same practice, and every where despoiled the temples and mausoleums of their ancestors. The edifices of Rome were considered as a vast and various mine, the metals were purified and re-cast, the marbles were hewn and polished:<sup>d</sup> columns and ornaments were thus readily procured, but taste was wanted to arrange them: the art of sculpture fell into disuse, and was succeeded by a rude skill in mosaic work; and the science of architecture was reduced for several ages to

<sup>d</sup> Gibbon, VI. lxxi. 629. See also 631.

building walls, composed of incongruous heaps of ancient materials, constructing heavy timber roofs, and forming arches without any regard either to symmetry or proportion.

The first churches of the other Christian countries of Europe were imitated from this debased Roman style; it is necessary therefore for us to understand in the first place the form and arrangement of the religious structures of Constantine and his successors of the fourth and fifth centuries, before we pursue our inquiry into the early history of the architecture of France. Several ancient fabrics still remain at Rome to illustrate this subject, amongst which St. Paul's may be selected as the best specimen of the mode of building, and St. Clement's of the internal disposition of the first Christian churches.<sup>a</sup>

## CHAP. II.

## THE CHURCHES OF THE GAULS.

The Assemblies of the Christians—Churches of the third Century—Roman Churches of Constantine imitated—Remains of Paganism.

THE Christian religion appears to have been introduced into Gaul in the course of the second century,<sup>a</sup> about which time several small assemblies of Christians were established in the southern provinces, and Lyons even at that early period could rank among its bishops Irenæus, the disciple of Polycarp, one of the most celebrated writers of his age; but the new faith had still to contend with the power of the state as well as the rudeness of the people, and it consequently made but a slow progress. In the third century seven bishops were sent from Rome to extend its influence in the districts of Tours, Orleans, Thoulouse, Narbonne, Paris, Limoges, and Auvergne;<sup>b</sup> yet, notwithstanding the success which is said to have attended their preaching, and the zeal of their disciples, we find that

<sup>a</sup> Appendix G.

<sup>b</sup> Gregorii Episc. Turon. Hist. France, I. 28.

the churches or meetings of the Christians were chiefly held in the houses of the more opulent converts.<sup>a</sup> It should seem, however, that edifices were erected in some places expressly for the purposes of Christian worship, for we read that when Crocus, king of the Alamanni, made an irruption into Gaul about the middle of the third century, he destroyed at Auvergne, a church built with the utmost solidity, which was covered with a leaden roof, and ornamented internally with marbles, mosaics, and a marble pavement:<sup>b</sup> but as this account is given by an historian who lived three centuries after its destruction, it may perhaps be justly suspected of exaggeration, and the description may have been rather taken from the manner of building which prevailed in his own time.

It is probable, however, that the Christians had already begun to erect edifices expressly for ecclesiastical purposes;<sup>c</sup> and many of them are said to have been destroyed during the persecution of Dioclesian.<sup>d</sup> The form of these structures cannot now be exactly ascertained; although inferior in extent and splendour, perhaps they were not much unlike in shape

<sup>a</sup> Appendix H.

<sup>b</sup> Greg. Tur. Hist. Franc. I. 30.

<sup>c</sup> Appendix I.

<sup>d</sup> Appendix K.

and arrangement to the religious buildings of the following century. Each is described as containing the church and a lodging for the <sup>a</sup> officiating priest.

The conversion of Constantine in the fourth century produced a new æra in the religious edifices of the Christians. A church was erected by that emperor at Auvergne, in a stile of considerable magnificence;<sup>b</sup> and from this time the Gaulish churches were built after the plan which had already been adopted at Rome and in the rest of Italy. St. Martin of Tours, raised a church in that city in honour of St. Peter and Paul, and having destroyed the Pagan temples in several villages, he baptized the inhabitants and erected churches.<sup>c</sup> Briccius and Eustochius, his successors, were actuated by the same zeal, and built several in Tours and its neighbourhood;<sup>d</sup> but the Christians as yet were not very numerous nor opulent, and their churches appear to have been, in general, constructed on a small scale.<sup>e</sup>

<sup>a</sup> Domus Ecclesiae Greg. Tur. Hist. Franc. I. 39. and other places—ipsi sacerdoti in ipso, quod modo saluatorium dicitur, mansio erat II. 21.

<sup>c</sup> Greg. Tur. Hist. Franc. X. 31.

<sup>d</sup> Ib. ib.

<sup>e</sup> Briccius ædificavit ecclesiam *parvulam* super corpus beati Martini. ib. ib.

In the fifth century the Roman manner of building seems to have been practised in Gaul with considerable splendour. Gregory of Tours relates that *Perpetuus*, Bishop of Tours, in the reign of Childeric, thinking the small church which Briccius had erected over the tomb of St. Martin, unworthy of so distinguished a saint, rebuilt it in the form in which it remained in his time; his description of it therefore is curious and authentic. It was one hundred and fifty-five feet in length, sixty in breadth, and forty-five in height. In the whole edifice there were fifty-two windows, one hundred and twenty columns, and eight doors, namely, three in the sanctuary, and five in the body of the church.<sup>a</sup> The same prelate also rebuilt the church of St. Peter and Paul, in which he deposited the marble shrine which had formerly enclosed the relics of St. Martin, and which was greatly admired for the beauty of its workmanship.<sup>b</sup> He besides constructed several churches in the city and neighbourhood of Tours.<sup>c</sup> *Eufronius*, a priest of the same place, erected the church of St. Symphorien:<sup>d</sup> and about this time *Namatius*, bishop of Auvergne, seems to have rivalled, and even surpassed *Perpetuus*, by the magnificent

<sup>a</sup> Greg. Tur. Hist. Franc. II. 14.

<sup>b</sup> Ib.—ib.

<sup>c</sup> Ib.—X. 31.

<sup>d</sup> Ib.—II. 15.

manner in which he rebuilt his cathedral. It was constructed in the form of a cross, with aisles <sup>a</sup> on each side, and terminated by a round apsis; the walls of the sanctuary were encrusted with various marbles, and the whole church was perfumed with aromatic odours.<sup>b</sup> His wife also founded a church in honour of St. Stephen, and is related to have sat with a book in her hand reading ancient histories to the painters while they were ornamenting its walls.<sup>c</sup>

Churches were very generally established in the villages of the southern districts of Gaul during the fifth century; and idolatry, which had till then retained its influence in many places, began finally to disappear.<sup>d</sup> In the north Christianity made a slow and difficult progress, and though some churches

<sup>a</sup> Ascellæ.

<sup>b</sup> Greg. Tur. Hist. Franc. II. 16. This church appears to have been constructed entirely under the direction of the bishop. *Ecclesiam suo studio fabricavit*, is the expression of the historian, which is similar to the phrase often used by old English writers, to build by his counsaile. The fabric was one hundred and fifty feet long, sixty wide, and fifty high; it contained forty-two windows, seventy columns, and eight doors.

<sup>c</sup> Ib.—II. 17.

<sup>d</sup> Many remains of Paganism existed in the south at the beginning of the fifth century. See a curious dissertation, *sur le Cervulus & Vetula*, by the Abbe Lebeuf. Recueil, Tom. I. 282. 300.

had been founded before this period by the zeal and exertions of the propagators of the gospel, the remains of Paganism were not entirely extirpated from that part of the kingdom till several centuries afterwards.<sup>a</sup>

<sup>a</sup> Appendix L.

## CHAP. III.

THE PROGRESS OF ARCHITECTURE FROM CLOVIS  
TO CHARLEMAGNE.

The Form and Ornaments of Churches—The Arts practised and encouraged by the Clergy—Names of several Architects—Wooden Towers—Stone Towers introduced.

THE invasion of the Franks in the sixth century was at first accompanied by the destruction of ecclesiastical buildings, but the triumph and baptism of Clovis established the cause of Christianity on a stronger foundation than before. Actuated by the ardent zeal of a new convert, and filled with gratitude for his successes, the French monarch founded several churches and monasteries; the chief of which were the Abbey of St. Peter and St. Paul, (now St. Genevieve) without the walls of Paris, which was begun in 507; the church and abbey of St. Peter, (or St. Pere), at Chartres, and that of St. Mesmin, near Orleans: others also were constructed by his order, &c. during his reign. Upon the division of his empire after his death, Childebert, one of his sons and successors, built in the neighbourhood of Paris the church and abbey of St. Vincent, afterwards called

S<sup>t</sup>. Germain des Prez; and Clothaire I, the brother of Childebert, began the church of St. Medard, at Soissons,<sup>a</sup> which was finished by his son Sigibert.<sup>b</sup> Hardly any remains of the buildings of this age have reached our times, though it has been conjectured that the ancient tower of S<sup>t</sup>. Germain des Prez, and that of St. Pere at Chartres, are part of the works which we have just mentioned.

The monks of succeeding times, and even those who were contemporary, have been guilty of considerable exaggerations in their descriptions of the churches of this period; but though small in size, and barbarous in taste, they were frequently built with great solidity, and at a considerable expence: like the religious edifices of the preceding century, from which they were generally copied, they continued to exhibit, on a contracted scale, the form of the Roman churches of Constantine and his successors; their shape was oblong, with a semicircular termination at the eastern extremity; and occasionally, but perhaps rarely, it assumed the figure of a cross; the roof was supported by internal porticoes of stone and marble columns,

<sup>a</sup> Recueil Hist. de la vie & des Ouvrages des plus celebres architectes par J. F. Felibien, liv. III. 144.

<sup>b</sup> Greg. Tur. Hist. Franc. IV. 19.

and externally covered with lead, or, in some instances, with gilt tiles.<sup>a</sup> The sanctuary and the coved ceiling of the apsis were encrusted with marbles and mosaic work, and a similar decoration was sometimes given to the western front. The walls were not unfrequently embellished, and the sculpture relieved by painting: the windows, which were often glazed,<sup>b</sup> were narrow and round-headed, like those of the contemporary churches of Italy; and the pediment of the western front was generally perforated with a circular aperture, a simple ornament, which was afterwards expanded into the beautiful rose windows, so much admired in the cathedrals of later times.

It has been doubted<sup>c</sup> whether at this early period these were professed architects in France, and it must be confessed that the state of the country is not much in favour of such a supposition: the inhabitants of the towns, as well as the peasants attached to the soil, when not engaged in the perpetual contests of their feudal masters, were consigned to the most menial employments, and deprived of the commonest rights of hu-

<sup>a</sup> Appendix M.

<sup>b</sup> Gregory of Tours mentions some thieves having entered the church of St. Martin, by breaking the glass of one of the windows—*effractâ vitreâ sunt ingressi*. Hist. Franc. VI. 10.

<sup>c</sup> Felibien, Arch. III. 145.

manity; the barons were uncivilized and ferocious; commerce had not yet begun to raise the lower orders in the scale of society, and the arts had made little progress among the higher ranks:<sup>a</sup> the clergy were the depositaries of the feeble remains of knowledge, and the only persons capable of attending to pursuits which depended upon leisure and science; and it was chiefly through their exertions that the art of building was revived in France and the northern countries in Europe.

The ancient writers often mention instances of an abbot giving a plan, which his convent assisted in carrying into execution. In succeeding times the most difficult works in Mosaic, carving, smelting, and painting, were frequently executed by ecclesiastics,<sup>b</sup> and when we find the cloister the abode of the arts in later times, we may be certain that the more remote the antiquity, the more this was likely to be the case. The edifices of religion owed their first existence to the zeal of the clergy, the more enlightened prelates invented, or procured

<sup>a</sup> The wretched picture which Gibbon has drawn of the state of the peasants of Gaul under Dioclesian and Maximilian in the third, is applicable to their descendants of the sixth century, with even perhaps darker colours; no event had occurred to improve their condition: on the contrary, they had passed from the dominion of the more civilized Romans into that of the rude and savage Franks. Gibbon Hist. I. 361.

<sup>b</sup> Appendix N.

the plans, and carried them into execution by their own assiduity: skill would naturally follow endeavours thus repeated and thus encouraged, and when proper models had been introduced, the imitations of them would become easy and frequent. But although from record, as well as probability, we may conclude that the arts in this age were principally cultivated by the clergy, it is no less certain that there were persons who practised them as a profession:<sup>a</sup> what that powerful order found necessary to promote by their own exertions, they did not fail to patronise in others, and to the common masons and carpenters who might be found in the different cities of France, persons of superior skill and intelligence were added, who were invited from distant quarters by the enterprising liberality of the bishops. The superstition of the times, and the authority of the church, secured them employment and protection; they gradually increased in numbers, and improved

<sup>a</sup> Felibien seems to think that France, at this time, contained no artists superior to the common masons, who, he says, “knew little more than to mix the mortar and prepare the materials,” iii. 146. The bishop of Tours, however, speaks of his artificers in terms which might be used by a prelate of a much later and more civilized period — *Basilicas adustas incendio reperi, quas in illo nitore vel pingi vel exornari ut prius fuerant artificum nostrorum opere imperavi*; he afterwards says, *Baptisterium edificari præcepi*. Hist. Franc. x. 31.

in science, till at length at a subsequent period they produced the most able artificers from among themselves. France, in fact, at this time was not without professional artists, but they seem to have been neither numerous or eminent; and the clergy were frequently left to their own exertions and resources. Gregory of Tours speaks of several of his predecessors as if they had superintended the building of their churches, particularly *Ommatius*, who rebuilt the church of St. Gervase and Protasius, and began that of St. Mary;<sup>a</sup> and he expressly affirms that *Leo*, bishop of Tours, was an artist of great skill, particularly in works of carpentry, and that he built towers which he covered with gilt bronze,<sup>b</sup> some of which had lasted till his time.<sup>c</sup> One general spirit indeed seems to have prevailed among the French bishops of the sixth century to establish new churches, and improve the towns of their dioceses. *St. Germain*, bishop of Paris, is reported to have given the design for the church which Childebert founded near that city in honour of St. Vincent, and he was also sent to

<sup>a</sup> Greg. Tur. Hist. Franc. x. 31. As in many places in his Catalogue of Bishops, he says, *hujus tempore Ecclesia—edificata est*, when he writes *ipse construxit, ipse exaltavit*, it seems probable that he means to denote that the prelate of whom he is writing, was himself the architect of the work.

<sup>b</sup> *Turres holochryso tectas.*

<sup>c</sup> Hist. Franc. III. 17. X. 31.

Angers by the same monarch to construct a church there, dedicated to St. Germain, Bishop of Auxerre. He afterwards erected a monastery near Mans, and other buildings of the same nature in different places.<sup>a</sup> We have before mentioned *Eufronius*, a priest of Tours, being appointed a bishop of that city; he repaired two churches which had been destroyed by fire in 564, and afterwards rebuilt the cathedral, on which the munificence of Clothaire the son of Clovis, enabled him to place a covering of tin, or pewter.<sup>b</sup> *Avitus*, bishop of Clermont in Auvergne, erected the church of Nostre Dame du Port, the church of St. Genes de Thier, and repaired that of St. Anatolien.<sup>c</sup> The church of St. Martin at Brie, a building of considerable magnificence, which was supported by marble columns, and the sanctuary adorned with marble, having been burnt, was rebuilt about this time by Ferrol, bishop of Limoges, but it appears uncertain whether he performed the office of architect on this occasion.<sup>d</sup> *Dalmatius*, bishop of Rhodéz, studied the science of architecture, and began several

<sup>a</sup> Felibien Arch.

<sup>b</sup> Stanno. Hist. Franc. X. 31. As Gregory of Tours, on other occasions, when he mentions the covering of churches, makes use of *plumbum*, this must signify a metal, or composition of a different nature.

<sup>c</sup> Felibien Arch.

<sup>d</sup> Hist. Franc. VII. 10.

times to rebuild his cathedral, but being disappointed in the effect of his plans, he died without completing it.<sup>a</sup> *Agricola*, bishop of Chalons sur Saône, took upon himself to direct the building of several churches and other edifices, particularly his cathedral, which he ornamented with columns, and encrusted with mosaic and marble.<sup>b</sup> Gregory, bishop of Tours, though he does not appear to have been an architect himself, caused the church of St. Martin, and the other churches of Perpetuus, to be rebuilt in a more splendid manner,<sup>c</sup> and established several other in his diocese.

The three last prelates flourished at the time that France was governed by Chilperic I, Childebert II, and Guntran, who reigned in Neustria, Austrasia, and Burgundy. These princes protected the arts and founded a number of churches, among which we may mention that which was built by order of Guntran, at Chalons sur Saône, in honour of St. Marcel, and another dedicated to St. Lucien, which was erected by Childebert, near Beauvais. The works of Chilperic are most remarkable:

<sup>a</sup> *Ecclesiam construxit, sed dum eam ad emendationem sæpius destruxit, in compositam derelinquit.* Hist. Franc. V. 47.

<sup>b</sup> *Multa in civitate illa ædificia fecit, domos composuit: ecclesiam fabricavit quam columnis fulcivit, variavit marmore, musivo depinxit.* Ib. V. 46.

<sup>c</sup> Ib. X. 31.

he founded a circus for public shows at Paris, and another at Soissons.<sup>a</sup>

The science of architecture continued, in some measure, to improve during the *seventh century*: Clothaire II, in 613, united in his own person the various sovereignties into which France was divided; an event which, as it produced internal tranquillity, was highly favourable to the cultivation of the arts. It was about this time that *St. Eloy* rose into notice, whose skill as well as holiness, have acquired him the greatest celebrity.<sup>b</sup> Having been brought to court to make a saddle for the king, his extraordinary talents soon made him an object of royal favour, and after exercising the employments of goldsmith and architect during the reigns of Dagobert and Clovis II, he embraced the ecclesiastical profession, and was appointed bishop of Noyon by Clothaire III. St. Oüen has given a pleasing description of the monastery which he erected at Solognac, near Limoges; he also built a convent for nuns, and the churches of St. Paul and St. Martial at Paris: both of which were covered with lead; and his biographer mentions that he

<sup>a</sup> Felibien Arch.

<sup>b</sup> Aurifex peritissimus atque in *omni arte fabricandi* doctissimus—Audoen: Vita S. Eligii Episc. Noviomensis, Lib. I. c. v. apud Spicileg. T. V.

was paid for his trouble. When he became bishop of Noyon, he constructed a house for nuns in that city, and several monasteries in other parts of his diocese, some of which were executed by his pupils under his direction. Though he seems to have ranked high as an architect, he is chiefly celebrated for the magnificent shrines of gold, silver, and precious stones, which he constructed in different churches, particularly those of St. Denis and St. Martin of Tours, which procured him the greatest reputation. He died in 663.<sup>a</sup>

The greatest work of this century was the building the church of St. Denis by Dagobert, the son and successor of Clothaire, which is said to have exceeded in size and decoration all the religious structures of the preceding age. Other works were carried on by order of this monarch, among which, the tower of Strasbourg deserves to be mentioned; it was principally composed of wood, and was begun, it is said, by Clovis in 510, but, according to the archives of the cathedral, it was not finished until 643.<sup>b</sup> We can meet with no further record of any considerable buildings, or of the names of the architects who flourished under Dagobert, and the later monarchs of the

<sup>a</sup> Ib.—lib. I. cap. v. xv. xvii. xviii. xxxii. II. v.

<sup>b</sup> Felib. Arch. III. 159.—IV. 232.

first race; it is probable, however, that they continued to be chiefly ecclesiastics. St. Eloy, however, properly belonged to the class of professional artists; and we may learn from his history that persons of that description were magnificently patronized, and held in high estimation.

In the *eighth century* Pepin began to rebuild the abbey church of St. Denis, which was completed by his son Charlemagne, and consecrated in 775.<sup>a</sup> A part of this ancient edifice is still remaining, namely, the vault, or crypt, under the eastern end of the present church, which before the revolution was used as the burial place of the Bourbons. It is built in a strong, but heavy manner, and with great rudeness of execution; a capital, however, of one of the columns should be noticed, as it affords an illustration of the architecture of the times. This piece of sculpture exhibits the section of a church, in which a priest, assisted by some others, is performing his devotions before an altar, which is covered with a cloth. It is

<sup>a</sup> Felibien Hist. St. Denis, c. ii. 10.—Organs were introduced into some of the churches of France about this time; the first which was seen in that country was sent from Constantinople as a present to Pepin.—Burney, Hist. Mus. II. c. 2. St. Dunstan appears to have been the constructor of one of the first organs in England, in the tenth century.—Wil. Malmesb. de Pont. Anglor. lib. V.

divided by a range of columns which support round arches; the artist has contrived in the same piece to shew the west front of the building, which is flanked by two towers, a little higher than the church, full of small roundheaded windows like the Lombard towers at Rome, and finished, like them, with low roofs. The space between the towers is occupied by another window in the same style, but of larger dimensions.<sup>a</sup> The great entrance of the present church of St. Denis, which is round-arched, and of high antiquity, is also asserted to be a remnant of the structure of Pepin and Charlemagne.<sup>b</sup>

The mode and taste in building during the seventh and eighth continued the same as in the preceding century, though the features were somewhat enlarged and enriched; and it appears that in the course of the eighth century stone towers and belfries became common appendages to the churches of France.

<sup>a</sup> A representation of this curious capital is given in le Musée des Monuments Fran. par Alex. Lenoir, Tom. I. pl. 39.

## CHAP. IV.

## PROGRESS OF ARCHITECTURE.

From Charlemagne to Robert the Pious — Buildings at Aix-la-Chapelle — State of Architecture in Italy — Other Works of Charlemagne — Buildings of Louis le debonnaire — Incursions of the Normans — Distracted State of France — Expectation of the End of the World.

THE character of Charlemagne produced an æra in the arts as well as in the empire of France. Uniting to a disposition singularly active, resolute, and enterprising, a mind of superior intelligence, and filled with the loftiest views, he desired to emulate the greatest of the Cæsars, not only in his camp, but in the splendour and refinement of his court: he considered the advancement of literature and the arts as essential to the glory of his reign, as the triumphs of his arms; and the power and wealth which he had acquired in war were wisely applied to the encouragement of the arts of peace. At Rome his attention had been struck, and his admiration excited, by the magnificent remains of more civilized ages; he enabled the popes Adrian I and Leo III to repair the walls and aque-

ducts, and assisted by large contributions the restoration of many of the churches.<sup>a</sup> “If Charlemagne,” says Mr. Gibbon, “had fixed in Italy the seat of the western empire, his genius would have aspired to restore, rather than violate, the works of the Cæsars; but as policy confined the French monarch to the forests of Germany; his taste could be gratified only by destruction, and the new palace (and church) of Aix-la-Chapelle were decorated with the marbles of Ravenna<sup>b</sup> and Rome.<sup>c</sup>”

These structures of the ninth century are celebrated as the wonders of the age in which they were erected, and are described by contemporary writers in terms of unbounded admiration. The halls of the palace were decorated with the most costly ornaments, and marble basins were formed to receive the warm springs, in which the emperor delighted to bathe.<sup>d</sup> The magnificence of the church was so extraordinary as to give a new distinction to the name of the city.<sup>e</sup>

<sup>a</sup> Felibien Arch. III. 164. Besides the churches of St. Lawrence, St. Vincent, &c. which were rebuilt about this time, the Basilica of St. Paul was repaired, and a portico added to it by Adrian, who entrusted the superintendence of the works to Januarius, one of his officers.

<sup>b</sup> Appendix O.

<sup>c</sup> Appendix P.

<sup>d</sup> Eginhard, c. 22.

<sup>e</sup> The same writer mentions, that from the church which was commonly called *Capella*, the town came to be distinguished by the name of Aix-la-Chapelle.

We must indeed believe<sup>a</sup> that the buildings at Aix-la-Chapelle far exceeded both in taste and extent the works of the preceding French monarchs; it is probable also that Italian artists were employed in their construction,<sup>b</sup> and that Charlemagne would order them to imitate, as much as possible, the monuments of ancient Rome;<sup>c</sup> but the depraved taste which in this age prevailed in Italy and Rome itself, will prevent us from conceiving they exhibited any thing beyond a barbarous splendour. The Roman architecture had fallen into the lowest state of degradation since the fourth century; the churches of Constantine were still imitated, but the new edifices were on a smaller scale, dark, and irregularly built; in this manner the arts continued to languish in the seat of their former greatness till the eleventh century, when they began in some measure to revive under the Greek artists, who were invited from Constantinople by the commercial states in the north of Italy.

<sup>a</sup> Appendix Q.

<sup>b</sup> The monk of St. Gaul after describing the palace, observes, *Basilica, antiquis Romanorum operibus præstantiore, brevi ab eo fabricata, ex omnibus cismarinis regionibus magistris & opificibus advocatis.* Legend. lib. I. c. xxxii.

<sup>c</sup> *Fecit ibi et Palatium quod Lateranis nominavit.* Ib. I. xxx. After the Lateran palace at Rome, Aix-la-Chapelle is called by contemporary writers *secunda Roma, ventura Roma, alta Roma.* Valesii. Not. Gall. p. 28.

The churches therefore of the age of Charlemagne which still remain, exhibit, it must be allowed, the most striking examples of barbarous deformity.<sup>a</sup> The architects of them employed the most costly and beautiful columns to support diminutive arches, and high masses of wall disfigured with uncouth painting,<sup>b</sup> or covered with glittering, but frightful mosaic work. Pillars of different forms and proportions were sometimes placed in the same line.<sup>c</sup> The narrowness of the windows admitted but a feeble glimmering light;<sup>d</sup> the pavements were composed of various and uneven fragments;<sup>e</sup> and the timber of the roof was generally left without ceiling or ornament.<sup>f</sup> Yet the importation of so many pieces of ancient

<sup>a</sup> The churches of St. Vincent and Anastasius, of St. Lawrence in Verano, and St. Agnes without the city, erected about this time at Rome, are perhaps the most striking instances of debased art which any where exist.

<sup>b</sup> The internal walls of the old church of St. Peter at Rome were painted in the rude manner of the age under Formosus I, in the year 890. Ciamp. de sac. Æd. IV. 34.

<sup>c</sup> Appendix R.

In other places also he speaks of the "*fenestræ arctiores*" of this age.

<sup>e</sup> Pavimentum partim sacris, partim profanis inscriptionibus, quâ mutilis, qua integris stratum. Ib. II. 13.

<sup>f</sup> Appendix S.

sculpture could not but have produced some effect on the arts of France. The prelates who visited the court of their monarch would return home with new and improved ideas of beauty; a zeal was excited to imitate ancient models, and France in most of her provinces containing remains of Roman architecture, the rising genius of her artists naturally produced a nearer resemblance to the classical style and proportions in the Lombard columns of that country, than can be found among the Saxon and Norman buildings of our ancestors. We may remark in the tomb of Charlemagne a curious instance of the taste for imitating the antique which prevailed at this time; it is copied from a Pagan sarcophagus, and is ornamented with an alto-relievo of the Rape of Proserpine, which, though rudely executed, is finished with considerable distinctness and effect.\*

The wooden bridge of five hundred paces in length, which Charlemagne built across the Rhine at Mayence, deserves to be reckoned among his great works. When it was destroyed by fire, he determined to rebuild it with stone, but was prevented by his death. His palaces at Ingelheim, near Mayence, at Nimeguen on the Waël, and in other places, were esteemed the most magnificent structures which had been raised for more

\* A representation of it is given in the Musée des Mon. Fran. I. Pl. 24.

than four centuries. This magnificence extended to every part of his empire, he assisted the inhabitants of Florence to repair the public works in their city, and conceived the grand project, which he began to execute, of opening the communication between the ocean and the Black sea by uniting the Danube and the Rhine.\*

The plunder afforded by his successful campaigns enabled him freely to indulge his magnificent disposition; and it cannot be doubted, that his various works, and the intercourse which his government produced between France and the rest of Europe, were very favourable to the progress and improvement of the arts; as not only the number of artists was greatly increased, but they were in many instances furnished with better models for imitation.

A short time before his death, Charlemagne called his sons together, and recommended to them the care of the works with which he had adorned his empire; desiring them to add to them, and in every thing to promote the public advantage: a command which was not neglected by Pepin and Louis, the kings of Italy and Aquitaine.

Louis, who outlived his brother, and succeeded to the crown

\* Felibien Arch. III. 163—165.

of France and the empire of the West, would perhaps have emulated still further the magnificence of his father's example, had not the dissensions in his family prevented the completion of his designs. The catalogue of religious structures which he built is very extensive: the chief of which are the churches and monasteries of St. Philibert, St. Florent sur Loire, of Karoffe, Conches, St. Maixant, Menat, Manlieu in Auvergne, Moissac, St. Savin in Poitou, Nouaillé, St. Theotfroy, St. Paixant, Solognac near Limoges, St. Marie, St. Radegonde d'Agnane, St. Laurent and Caunes. Louis also endeavoured to reform the manners of the clergy, whom he censured for the ostentatious splendour of their habits, which were covered with silver and gold, and precious stones; he prohibited them from exercising any trade unsuitable to the dignity of their profession, and enjoined them particularly to maintain the church property, and to repair the churches and monasteries<sup>a</sup> which were intrusted to their care.

It was during the reign of this monarch that Ebo, bishop of Rheims, began to rebuild his cathedral, on which occasion the king sent his own architect *Rumalde* to carry on the work:<sup>b</sup> it is not said whether he was an ecclesiastic, but perhaps not,

<sup>a</sup> Felibien Arch. III. 171—173.

<sup>b</sup> Frodoard, Lib. III. c. 19.

as the professional artists were become numerous at this time, and it is clear that he practised the art as a profession.

The distracted state of France at the end of the reign of Louis, and under his successors of the Carlovingian race, impeded for a time the advancement of the arts, and swept away many interesting monuments. The progress of the Normans, who now began their irruptions, was every where marked with fire and desolation. A body of these barbarians under Hastings, destroyed a great number of churches. St. Oüen at Rouen, fell a prey to their fury in 842, and the town and cathedral of Chartres were burnt by them in 850. A few years afterwards they demolished the church and monastery of St. Genevieve at Paris, set fire several times to the abbey of St. Germain des Prez, and ruined the church of St. Martin at Tours, with many others. The Saracens, on the other side, made an incursion into France, in which they pillaged the abbey of Mont St. Michael, and ravaged a considerable tract of country.<sup>a</sup>

During this distressing period Charles the Bald in vain endeavoured to fortify his cities and recruit his armies: he was reduced to the misery of seeing his kingdom crumble away

<sup>a</sup> Felibien Arch. III. 174, 175.

around him, and to lament the defection of his nobles, who seized the moment of his misfortunes as a favourable opportunity for asserting their own independence. Several works, however, were carried on under his government, particularly at Compiègne, which he ornamented with the abbey of Nostre Dame, (afterwards called St. Corneille,<sup>a</sup>) and other structures, and dignified the town with the title of Charle-ville. He rebuilt also the church and abbey of St. Benigne at Dijon, and many edifices of the same kind were erected during his reign. The nobles, who had acquired the sovereignty of Provinces, soon began to distinguish themselves by the monuments of their piety, among whom Baudouin, the first Count of Flanders, and his descendants were the most remarkable. A castle was raised at Blois by Hastings the Norman chief, who was now acknowledged Count of Chartres by the French monarch. The Norman princes moreover, after they were established in Neustria, yielded to the spirit of the age, and founded many churches and monasteries.<sup>b</sup>

The buildings of the ninth and tenth centuries were imitated from the works of Charlemagne; but his feeble succes-

<sup>a</sup> See Mon. Hist. sur Charles le Chauve. Lebeuf, Rec. I. 356.

<sup>b</sup> Felibien Arch. III. 177.

sors, deficient both in riches and power, were unable to equal them in magnitude or beauty of materials. France; during the greater part of the ninth century, was a scene of consternation and bloodshed: the traces of civilization disappeared amidst battles and cruelties, and the human intellect sunk still deeper in the darkness of ignorance and superstition.

At this period (the tenth century) so hostile to the progress of the arts, an idea was adopted, which proved more fatal to them than the terrors of war or the devastations of the Normans. It was believed that the thousand years mentioned in the Apocalypse would be completed at the close of the tenth century, and that the end of the world would happen at that time: notwithstanding the opposition of a few churchmen, the notion spread with extraordinary rapidity in France, and the neighbouring countries. The corruption of manners which every where prevailed, and more especially among the clergy, the consequence of the disordered and barbarous state of society, seemed to justify the apprehension that the reign of Anti-Christ was come, and that the dissolution of all things was at hand; and so strong and so general was this impression, that scarcely a single building of note was undertaken during this period, and the churches already erected were suffered to

fall into decay. As the time for the accomplishment of the prophecy drew near, many devout persons hastened to the east to meet their Saviour at Jerusalem, while the lower classes of the people, sunk in the grossest ignorance, neglected the offices of religion, and sought relief from their uncertainty in the illusions of magic and witchcraft.<sup>a</sup>

The most celebrated, and almost the only foundation of consequence which took place during this dreary period, was the abbey of Clugny. It was built about the year 910 by Berno, abbot of Balme, with the assistance of William Duke of Aquitaine and Auvergne.<sup>b</sup> Odo, the second abbot, introduced, among the monks assembled here, the rule which afterwards became famous throughout Europe, and the construction of the present church has also been attributed to him;<sup>c</sup> but there is little doubt that this edifice was the work of the succeeding century. Having established the discipline of his convent, Odo visited Rome in 936, and died in 942.<sup>d</sup>

*Maignaud*, a canon of St. Genevieve at Paris, is recorded as the builder of the entrance of that church in the reign of

<sup>a</sup> Glaber. Rodulphi Hist. Lib. II. c. 6. III. c. 4. Baronius Ann. Eccles. Tom. XI. An. 1001. 1003.—and Le Sueur. Hist. de l'Eglise, VIII. p. 478.

<sup>b</sup> Glaber. Hist. III. c. 5.      <sup>c</sup> Lenoir. Mus. des. Mon. Fran. Tom. II. 6.

<sup>d</sup> Cave. Hist. Litt. p. 496.

Hugh Capet;<sup>a</sup> we are also able to discover the name of another architect who flourished in this dark century (*Anstée*, a monk of Gorze), who seems to have enjoyed a considerable reputation, though said to have had but few opportunities of exercising his talents.<sup>b</sup>

We must lament however in general, that the historians of these early times have either wholly neglected to mention the names of artists, or have made use of such equivocal terms<sup>c</sup> in speaking of them, that it is difficult to determine whether they mean to express the architect under whose direction, or the founder at whose expense the building was constructed.

<sup>a</sup> Millin. *Antiquites Nationales*, Tom. V. No. 60.

<sup>b</sup> Lebenf. *Etat des sciences dep. Charlem. jusqu'a Roi Robert* Rec. II. 139.

<sup>c</sup> The terms, *Structor*, *Exstructor*, *Ædificator*, *fecit*, *ædificavit*, *construxit*, &c. which accompany the mention of building in the archives and records of ancient churches, render it often impossible for us to come to any certain decision respecting the meaning of the writer.

## CHAP. V.

THE PROGRESS OF ARCHITECTURE FROM ROBERT  
THE PIOUS TO PHILIP AUGUSTUS.

French Churches rebuilt and repaired—the Norman Churches—first Crusade—  
Introduction of the pointed Arch—The Bridge of Avignon—total Change of  
Style in Architecture.

THE Christians at the beginning of the *eleventh century*, relieved from their mistaken apprehensions, hastened to rebuild and repair their ecclesiastical structures: the various cities and provinces, especially of France, vied with each other on this occasion in a display of enthusiastic devotion. On all sides new and more stately edifices of religion arose, and the world, according to the expression of a contemporary writer, seeming to cast off its ancient appearance, every where put on a white mantle of churches.<sup>a</sup>

Robert the Pious encouraged by his example and assistance the zeal of the clergy and the people, and in the peaceful interval of his reign the science of architecture, no longer obstructed by violence or fanaticism, began to display itself

<sup>a</sup> Appendix T.

with superior majesty and effect. The contributions of this monarch enabled Morard, the abbot of St. Germain des Prez, to rebuild the church of his convent on a larger scale:<sup>a</sup> St. Genevieve was also restored, and a cloister added to it by his order, and he made preparations for erecting a cathedral at Paris, in a style of the utmost magnificence the times would allow.<sup>b</sup>

Orleans, the place of his nativity, was particularly distinguished by the marks of his piety; he built there the churches of Nostre Dame de bonnes nouvelles, St. Peter, and St. Aignan, which last was consecrated with great solemnity in 1029: he made several donations to the cathedral, which Arnoul, the bishop, had almost wholly rebuilt by means of a treasure which he accidentally discovered in digging the foundations.<sup>c</sup>

Many other religious structures<sup>d</sup> owed their existence to his liberality, particularly the churches of St. Nicholas des Champs, near his palace, without the walls of Paris, and Nostre Dame des Champs, near the same city. St. Rieule at Senlis,

<sup>a</sup> Bouillart Hist. St. Germain des Prez. III. 2.      <sup>b</sup> See Part II. c. iii.

<sup>c</sup> Maroles Hist. des Roys de France, p. 157.

<sup>d</sup> Helgaud, moine de St. Denis, auteur de la vie du Roy Robert, nomme quatorze monasteres et sept eglises que ce Roy fit construire de neuf ou rebastir de son tems. D. M. Felibien Hist. de Paris, III. 38.

St. Hilaire at Poitiers, St. Cassian at Autun, Nostre Dame at Estampes, St. Leger in the forest of Iveline, and St. Mark at Vitri:<sup>a</sup> the monastery of Nostre Dame at Poissy, was founded by Constance his queen: it is probable also that he rebuilt or repaired the church of Fleury, now called St. Benoit sur Loire, where he had received his education under the abbot Gerbert, who was afterwards Pope Sylvester II.; on the portal of this edifice is inscribed VIVBERIUS ME FECIT. We meet with a similar record on the gate of the church of St. Ursin at Bourges, which appears to have been built about the same time. GRATVLFVS FECIT.<sup>b</sup> It were to be wished that other artists of these times had adopted this effectual mode of making their names known to posterity. Besides the edifices we have already mentioned, Robert surrounded Montfort and Espernon with walls and towers, and erected several palaces and castles in different parts of France.<sup>c</sup>

During the reign of this monarch a new church was constructed at the abbey of St. Benigne at Dijon; the foundations were laid in 1001, by the abbot *William*, who directed the work

<sup>a</sup> Du Tillet Chronique, p. 38.

<sup>b</sup> Lebeuf. Etat des Sciences. Rec. II. 140.

<sup>c</sup> Felibien Arch. IV. 192. Du Tillet Chron. 38.

himself, with the assistance of *Hunaldus*, a young monk, whom he had selected on account of his expertness in the arts.<sup>a</sup> This building was considered an excellent imitation of Roman architecture, but its celebrity seems, in a great measure, to have arisen from the columns of marble and stone which Bruno bishop of Dijon, had procured for its embellishment, from some other place.<sup>b</sup> The abbot William erected also several monasteries in the neighbourhood.<sup>c</sup>

The cathedral of Chartres, one of the grandest works of the age, was rebuilt about the same period by Fulbert, its bishop. This church, which is said to have been originally founded in the third century, had been frequently burnt, and particularly by lightning in 1020; upon which Fulbert undertook its entire reconstruction, and the great reputation he enjoyed in France and the rest of Europe, enabled him to execute it in a manner till then unknown in his country.<sup>d</sup> Kanute, King of England,

<sup>a</sup> Appendix U.

<sup>b</sup> Lebeuf. *Etat des Sc. Rec.* II. 140.

<sup>c</sup> *Vet. Chron. Divion. Spicileg.* I. 142.

<sup>d</sup> The length of this church is 420 feet, the height 108; the nave is 48 feet wide, with aisles 18 feet and a half wide, and 42 high: on each side of the choir the aisles are double, and the transept, which is 210 feet long, contains aisles, which seems to have been the first instance of this magnificent arrangement in France. There are seven chapels in the Chevet, and the Crypts and lower church are built with great art and regularity. *Felib. Arch.* IV. 190.

and Richard Duke of Normandy, were among the princes who assisted him with contributions; some accounts mention that he had the gratification of seeing the work finished before his death, which happened in 1028: this, however, is disproved by the epitaph upon Thierri, or Theodoric, his successor, still existing in the church of St. Pere, which ascribes the completion of the fabric to that prelate, who died in 1048.<sup>a</sup> The northern part was erected afterwards in 1060, at the expense of Jean Cormier, a native of Chartres, and physician to the king.<sup>b</sup>

In the reign of Henry I, the church of St. Remi at Rheims, founded by the Abbot Hermer, was consecrated in 1049, with great pomp, by Leo IX, and the new cathedral, which was completed at Seez in 1050, under the direction of *Azon*, a monk, having been burnt to the ground by the citizens in an attempt to drive from it a troop of robbers, who had taken refuge there; the same pontiff engaged Yves, Count of Bellême and Alençon, the bishop, to rebuild and restore it to its former

<sup>a</sup> *Complevit ecclesiam cathedralem.*—See Lenoir, (*Musée des Mon. Fran.* II. 128.) who has drawn this account from the archives of the city of Chartres, preserved in the national library, and seems on this occasion to deserve the praise of accuracy as well as diligence.

<sup>b</sup> Appendix X.

splendour.<sup>a</sup> Humbert, Archbishop of Lyons, erected in 1050, a stone bridge across the Saone in that city, and it is expressly mentioned that he was himself the architect, besides defraying the whole expence of this great work.<sup>b</sup>

In 1056, Girard, the first prior of La Charité sur Loire, began to construct the church of his convent, which was consecrated by Pascal II, in 1107. It appears, however, from an ancient record, that the fabric was completed by Girard before he resigned his office in 1084.<sup>c</sup>

The abbey church of Clugny, the largest and perhaps the most interesting of the ancient ecclesiastical monuments of France, was erected about this time. The Abbot Odilo, at the beginning of this century, by means of the Rhone and Durance, transported thither a number of marble columns, with which he is said to have constructed a cloister.<sup>d</sup> The present church, which contains several curious antique marble pillars, was perhaps began by the same prelate, but the chief part of

<sup>a</sup> Felibien Arch. IV. 194.

<sup>b</sup> Ib.—ib.

<sup>c</sup> Richardi Cluniac. Hist. de Origin. Monast. Charitatis. Lebeuf. Rec. Tom. II. Richard of Clugny seems to have lived in the latter part of the twelfth century.

<sup>d</sup> Monachus ignoti nominis sed vetus in libello de Vita S. Odolonis scribit Odilonem *Clastrum* struxisse, columnis marmoreis ex ultimis partibus provinciae, &c. &c. Valesii Not. Galliarum, p. 148.

it was built by Hugh, his successor, about the year 1069;<sup>a</sup> it was finished by this abbot, and the ceremony of its dedication was performed in 1130 by Innocent II, who had formerly been a monk of Clugny.<sup>b</sup> The church of St. Lucien at Beauvais, was rebuilt about 1078, by two artificers who are denominated *Cementarii*. In the old record, one of these, named *Wimmbolde*, appears to have constructed the body of the fabric, and the other, *Odo*, was only employed upon the tower.<sup>c</sup>

In two ancient registers of the abbey of Villeloin, we find the following notices, which labour under the difficulties we have already mentioned, Kal. Jan. obiit Maynardus ædificator nostri hujus loci, and 8. Idus Augusti obiit Mainerius ædificator nostri hujus loci.<sup>d</sup> It is impossible for us to decide whether these persons were the founders or the architects of the buildings in question, though it is very probable that they were both.

The style of architecture in the eleventh was the same as in

<sup>a</sup> Alien Priories, Vol. II. p. 104. — The length of the church of Clugny is 620 feet; it has two transepts, the upper 200, the lower 120 feet long. The tomb of St. Hugh, and the painting of the Apsis, a work of the twelfth century, but designed with great freedom and spirit, are remains of antiquity particularly worthy attention. See Musée des Mon. Fran. Tom. II. Pl. 57, 58.

Bower. Lives of the Popes, VI. p. 29.

<sup>c</sup> Felibien Arch. IV. 193.

<sup>d</sup> Ib.—ib.

the preceding centuries, though the churches were constructed on a larger scale, and in a more solid manner. With a few exceptions, the oldest buildings now existing in France, are to be traced to this æra: the venerable fabrics of St. Germain des Prez, St. Benigne at Dijon, of Chartres, La Charité sur Loire, Clugny, and many others, still remain to illustrate the history of the arts of this period. The fashion in practice all over Europe continued to be a barbarous imitation of the Roman manner, but from various circumstances, in different countries, it partook of different features. The Saxon churches of England were inferior in elevation, massiveness, and magnitude, to those of the Normans, and the Norman mode differed considerably from that which was adopted in the neighbourhood of Paris, and further to the south. The Norman churches were in some instances larger, but exhibited a greater rudeness of design and execution. The columns, in particular, were without symmetry, and shewed but little skill in the art of sculpture, while those of the French artists, whose taste had been improved by the remains of Roman architecture, frequently imitated with success the Corinthian capital, and sometimes the classical proportions. Both styles are wholly deficient in correctness of taste, but the barbarous massiveness of a Norman structure has

a more decided air of originality, and its rudeness when on a large scale, serves greatly to enhance the sublimity of its effect.

The abbey church of St. Stephen, which was raised by William the conqueror at Caen, and that of the Holy Trinity, founded in the same city by his Queen Matilda,<sup>a</sup> are the principal examples on the continent of that peculiar manner of building, which was introduced into England by the Norman prelates at the end of the eleventh century.

The crusades, which now began to arrest the attention, and employ the exertions of Christendom, produced the most important consequences to the arts and manners of Europe: they roused mankind from the intellectual lethargy into which they had been plunged for so many centuries; they brought the different people of Europe together, and carried them into more civilized regions: the intercourse which this promoted among themselves, and the accession of light which they derived from a communication with Italy, Constantinople, and the East, gradually effected a general and visible improvement. The first crusade was soon followed by a change in the arms, dress, and architecture, of every nation of Europe.

<sup>a</sup> See Ducarrel's Anglo-Norman Antiquities.

In the course of the *twelfth century* the *pointed arch* began to shew itself in the edifices of France and the neighbouring countries; an innovation which was so universally admired and adopted, that in a short time the ancient Roman, or Lombard method, was entirely discontinued, and a new character of building, conceived in a different taste, and founded upon other principles, sprung up and spread itself over the greater part of Christendom. Among the earliest instances of the appearance of this new style in France, we may remark the works of the celebrated *Suger*, abbot of St. Denis, which were begun in 1137. This prelate was greatly skilled in architecture, and under his direction the church of his convent was almost wholly rebuilt with unexampled rapidity, about the middle of the twelfth century.<sup>a</sup> Nearly at the same period we may place the foundation of the church and monastery of the Knights-Templars at Paris. This body, which was instituted at Jerusalem in 1118, was incorporated in Paris in 1148,<sup>b</sup> and it seems probable that their buildings, which bear the marks of the earliest gothic character, were commenced immediately afterwards.<sup>c</sup> The tower, which

<sup>a</sup> Dom. Felibien Hist. St. Denis, IV. 7. See Part II. c. iii.

<sup>b</sup> D. Felibien—Hist. de Paris, IV. 57.

<sup>c</sup> Ib.—ib. Theatre des Antiquitez de Paris.

was perhaps the last part of their edifice, was erected by Hubert, treasurer of the order, who died in 1222.<sup>a</sup>

*Hilduard*, a Benedictine monk, deserves to be classed among the scientific architects of this age; he was employed about the year 1170 by Foulcher, abbot of St. Pere at Chartres, to rebuild the church of his convent, which is still admired for the excellence of its construction. As Hilduard passed a great part of his life in this monastery, it has been doubted whether he was engaged in any other works of consequence. About this time also flourished *Boiliviis*, a celebrated architect of Provence: we are not however acquainted with any of his buildings except the church of Maguelonne, an inscription on which bears his name, and the date 1178, when it was finished.<sup>b</sup> It may be curious to mention that Henry II of England, who appears at last to have been awed into repentance for the murder of Becket, besides enriching several of the churches in his French dominions, founded in the neighbourhood of Fontevrault, where he was buried, the monasteries of Baugerais Villiers and St. Jean du Liget, in expiation of his crime.<sup>c</sup>

The great bridge across the Rhone between Avignon and

<sup>a</sup> Felibien Hist. IV. 57. p. 181.

<sup>b</sup> Felibien Arch. IV. 200.

<sup>c</sup> Marotes Hist. des Roys, p. 182.

Villeneuve, one of the grandest efforts of architectural skill which France has ever produced, was erected in the twelfth century ; many extraordinary circumstances are related of St. *Benedict*, or *Benezet*, its founder, who is described as a shepherd inspired by God to undertake this vast enterprise. However we may feel inclined to doubt his inspiration, we must allow him to have possessed uncommon skill and great public spirit; and considering the extent and novelty of the plan, it may be suspected that he designedly had recourse to the aid of superstition. He laid the foundation of his work in 1171, and completed it after eleven years labour in 1188. Having repaired one of the arches, which had accidentally given way, he proceeded to erect near the entrance of the city an hospital of religious persons, who were denominated les Freres du Pont, their office being to preserve the fabric, and to afford succour to travellers. In this retreat he resided till his death, which happened before the year 1195, when he was buried in a chapel on the third pier of the bridge on the side of Avignon.\*

If we reflect on the boldness and utility of this undertaking, as well as the permanency he ensured by annexing to it a religious foundation, we cannot fail to attribute to Benezet a more

\* Felibien Arch. IV. 201.

than ordinary share of genius, and esteem him one of the enlightened benefactors of mankind rather than a fanatic.

The former repairs, which were slight and insufficient, having left the church and monastery of St. Genevieve in a ruinous condition, Stephen, who was elected abbot in 1177, determined to undertake the complete restoration of the whole fabric, which he effected before he was appointed bishop of Tournay in 1192.<sup>a</sup> The upper stories of the tower were rebuilt under the direction of Thibault, the precentor of the convent.<sup>b</sup> At this time also Maurice de Sully, bishop of Paris, was engaged in erecting the eastern part of the cathedral of Nostre Dame,<sup>c</sup> a work which was carried on with great spirit by his successors, though it was not entirely completed for the space of nearly two centuries afterwards. The choir of the cathedral of Lyons seems to have been constructed about this period,<sup>d</sup> and the collegiate church of St. Nicolas at Amiens was begun about 1192, and the portal finished in the year 1200.<sup>e</sup>

We have already remarked that the architecture of France underwent a total change in the course of the twelfth century ;

<sup>a</sup> D. Felibien, *Hist. de Paris*, V. 30. See Part II. c. ii.

<sup>b</sup> Millin, *Antiq. Nationales*, Tom. V. p. 58

<sup>d</sup> Appendix Y.

<sup>e</sup> Millin, *Ant. Nat.* V. No. 51.

during this period it exhibited three distinct characters; at the beginning of the century the old Lombard mode was in practice; towards the middle this became mixed with the new fashion of the pointed arch; and before the end the ancient heavy manner was every where discontinued, and the new airy unmix'd Gothic universally adopted.

## CHAP. VI.

THE PROGRESS OF ARCHITECTURE FROM PHILIP  
AUGUSTUS TO LOUIS XII.

Flourishing State of the Art—Names of Architects—Churches of St. Louis—  
Bridges—Wars of the English in France—their Effects—Works of the Four-  
teenth Century—Alterations in Taste—Churches of the Fifteenth Century—  
The Arts in Italy—The Gothic Style entirely abandoned.

WE now approach that æra, the *thirteenth century*, in which the Ecclesiastical Architecture of France arrived at the utmost point of excellence which it was destined to attain in the course of the middle ages; an excellence which in its characteristic merits was never surpassed in any other age or country. Every thing seemed to conspire, in the circumstances of the nation and of the world, to produce an interval favourable for the cultivation of the arts; and genius and talents were not wanting to make use of the happy opportunity. The thirteenth century found the French artists, a numerous and protected body, in possession of a new and beautiful style of building; the religious enthusiasm of the times, fanned by the spirit of the crusades, was at its height, and the throne of

France was filled by monarchs equally distinguished by their piety and magnificence. The dissensions between the barons and their sovereign which agitated *England* during the greater part of this century, increased the power and ensured the tranquillity of France.\* Thus were external circumstances no less favourable to the prevailing taste, and its triumph was proportionably brilliant. The most sumptuous churches, which now adorn the French cities, are the works of this age; and while their extraordinary beauty renders them interesting objects of curiosity, the accurate knowledge we are able to acquire of their dates and the names of their architects, is singularly important to the illustration of our own antiquities, and the general history of Gothic architecture.

We learn from the Chronicle of the Abbey of Bec in Normandy, that *Ingebramne*, who had lately been employed on the church of Nostre Dame at Rouen, was engaged in 1212, by the abbot Richard, to rebuild the church of his monastery; a great part of which he raised in the space of a year and a half, when he retired, and another artist, named *Waultier de Meulan*,

\* Henry III. renounced by treaty, in 1259, his claim to the French provinces possessed by his father, excepting the duchy of Aquitaine, for which he did homage before St. Louis.—Du Tillet.—Recueil des Traitez, p. 25. 28.

continued the work, which he finished in less than three years. Little however of this ancient edifice remains, it having been burnt twice within the century, and was renewed in its present form, under the abbot Pierre de Caniba, about the year 1273.<sup>a</sup>

At this time churches, almost without number, and rivalling each other in magnificence, were rising in every part of France: at Rheims, the cathedral began to display the graceful lightness of the new style,<sup>b</sup> the church of St. Nicaise, in the same city, was commenced by *Hugues Libergier*;<sup>c</sup> at Lyons the body of the cathedral was completed; the cathedral of Amiens, the pride and boast of Gothic architecture, was reared by *Robert de Lusarches*, *Thomas de Cormont*, and his son *Regnault*;<sup>d</sup> the works of Nostre Dame were carried on by *Jean de Chelles*;<sup>e</sup> and the celebrated *Pierre de Montereau*, who seems to have enjoyed a higher reputation than any of his contemporaries, was employed in the smaller, though not less beautiful, fabrics of the chapel and refectory of St. Germain des Prez,<sup>f</sup> and the Sainte Chapelle of the palace at Paris.<sup>g</sup> *Eudes de Montreuil*

<sup>g</sup> See Part II. c. vii.

also flourished at this period, an artist equally remarkable for his scientific knowledge and the boldness of his conceptions; he accompanied St. Louis in his expedition to the East, where he fortified the city and port of Joppa, and on his return to France was engaged by the king in the construction of several religious buildings, amongst which were the churches of St. Catherine du Val des Ecoliers, St. Croix de la Bretonnerie, les Quinze-Vingts,<sup>a</sup> the White Monks, the Marthurins, the Carthusians, the Cordeliers, and the Hotel Dieu at Paris.<sup>b</sup> He likewise erected the church of Nostre Dame at Mantes, which affords a striking proof of his genius and skill.<sup>c</sup> It is discovered from the inscription on his tomb, which formerly existed in the nave of the church of the Cordeliers,<sup>d</sup> that he died in the year 1289, and that he had two wives, one of whom, named

<sup>a</sup> An hospital founded by St. Louis, in the truest spirit of charity, for three hundred blind knights, after he had ransomed them from the Saracens, who had put out their eyes.

<sup>b</sup> Felibien Arch. IV. 210.

<sup>c</sup> The vaulting of the roof is pitched with an extraordinary boldness, that astonished Souflot and Gabriel, in their scientific survey of the French churches; it is related, that when the building was originally finished, the workmen refused to remove the centering, till Eudes, by sending his nephew to assist them, quieted their apprehensions. The height of the roof from the pavement is ninety-six feet. Millin, Ant. Nat. Tom. II. No. 19.

<sup>d</sup> This church was almost entirely destroyed by fire in 1580.

Mahault,<sup>a</sup> attended the Queen on her voyage to Egypt and the Holy-land.<sup>b</sup>

Another artist, called Jouselin de Courvault, accompanied the king to the crusade, and invented several warlike machines.<sup>c</sup>

The number of religious edifices, which were erected in France during the reign of St. Louis, exceeds all former or subsequent example; in addition to those which we have already mentioned, and many others which were founded by individuals,<sup>d</sup> the church and abbey of St. Antoine near Paris, the churches of the Filles Dieu, the Jacobins, the Carmelites, and the Cordeliers of the Fauxbourg St. Marcel, were built by the orders of the king: nor were the marks of royal piety confined to the metropolis; the abbies of Lis near Melun, of Longchamp near St. Cloud, and St. Mathieu near Rouen; the greater part of the abbey church of St. Denis;<sup>e</sup> the Hotels Dieu of Vernon, Pontoise and Compiègne; the church and abbey of

<sup>a</sup> The same name as Mathilde, Mahaud, or Maud, so common in the French and English histories.

<sup>b</sup> Felibien, Arch. IV. 210.

<sup>c</sup> Joinville, Hist. St. Louis.

<sup>d</sup> The church of St. Stephen at Troyes, and some others, were founded by Nanry Count of Champaign. Joinville, Hist. par Du Fresne, p. 19. Note p. 47.

<sup>e</sup> See Part II. c. iii.

Manbuisson, the church of the Nuns of Poissy,<sup>a</sup> and the monastery and church of Royaumont,<sup>b</sup> are to be recorded among the magnificent monuments of this prince; who joined to the fervour of superstition, which he derived from the enthusiastic turn of his mind, and the character of the times, a political sagacity that enabled him to check and reduce within narrower limits, the exorbitant power of his nobles, and acquire an absolute command over the resources of his empire.

A bridge across the Rhone at Lyons was erected about the year 1244, and the Pont St. Esprit, another vast structure, the result most probably of the useful example of Beneret, which in some respects it resembles, was undertaken in the course of the same century. The first stone was laid with great ceremony in 1265, by Jean de Tianges, the prior of the monastery of St. Esprit,<sup>c</sup> and the whole of the fabric, which is above three thousand feet <sup>d</sup> in length, was completed in 1309. The build-

<sup>a</sup> Lenoir mentions this as the work of Pierre de Montereau. *Musee des Mon. Fran.* Tom. II. p. 18.

<sup>b</sup> Felibien Arch. IV. 212.

<sup>c</sup> Felibien Arch. IV. 202.

<sup>d</sup> The width of this bridge is fifteen feet; it is carried over nineteen great arches, and is besides pierced with four of a smaller size, to give a passage to the waters of the river when it overflows; in this it resembles the bridge of Avignon: for the purpose of resisting the extraordinary rapidity of the current, instead of being built in a straight direction, it forms an angle against the stream. A chapel is constructed on one of the middle piers.

ing of bridges was justly esteemed a work of charity in the middle ages; the situation of travellers, especially merchants, journeying with their goods to distant fairs, was no where so exposed and liable to the attacks of robbers, as at the passages of rivers. The Confraternité des Ponts, by whom the Pont St. Esprit was constructed, is represented as a company of free-masons, who engaged in works of this nature from motives of religion and humanity. The religious associations of artists for such purposes affords at once a proof of the actual barbarism and of the increasing civilization of the age.

The abbots of the Cistercian Order, who rebuilt the church of Nostre Dame des Dunes in Flanders, must be reckoned among the architects of the thirteenth century. The foundations were laid in 1214 by Pierre, the seventh abbot of the convent, but he dying the same year, the work was continued by his successors, Amelie, Gilles de Ste'e'n, Salomon de Gand, Nicolas de Belle, Lambert de Kenle, and Theodoric, the last of whom completed the fabric, which was dedicated in 1262.<sup>a</sup> The whole of this edifice was erected by the monks themselves, assisted by the lay-brothers and servants, amounting in all to more than eighty persons; and it deserves to be mentioned,

<sup>a</sup> Felibien Arch. IV. 213.

though not strictly a French building,<sup>a</sup> as a curious instance of the arts being generally studied and practised in a monastery at so late a period.

The name of Robert de Coucy, who completed the church of St. Nicaise and the cathedral of Rheims, an artist who equalled, and probably surpassed, his numerous contemporaries in richness and fertility of genius,<sup>b</sup> is the last to be recorded among the brilliant constellation of talents which adorned France in the thirteenth century, and who by a singular combination of boldness with symmetry, and lightness with ornament, produced the most majestic and sublime monuments of Ecclesiastical Architecture.<sup>c</sup>

But this triumph of the Gothic style in France was of short duration, and seems in a great measure to have ceased at this period (*about the fourteenth century*). The two succeeding ones were distinguished by no architectural efforts, of

<sup>a</sup> The cathedral of Strasbourg also, from its celebrity, and its situation in the neighbourhood of France, deserves to be noticed. It was finished in 1275, from the designs of Erwin de Steinbach. Two years afterwards the same artist began to raise the tower, which after his death, in 1305, was carried on by John Hiltz of Cologne, and completed in 1449, by an architect of Swabia, whose name is not known. See the Abbé Grandidier's History of the Church of Strasbourg, and Felib. Arch. IV. 231. 234.

<sup>b</sup> See Part II. c. 5.

<sup>c</sup> Appendix Z.

equal excellence with those which we have already enumerated. It is remarkable, among the churches whose history and antiquities will be minutely inquired into in the course of the following pages, that scarcely a part, and certainly no material part of any of them is to be referred to those ages. The cause of this, however, can be readily assigned in the wars which the English carried into the heart of France, and the divisions and factions of the French nobility rendered that kingdom during the fourteenth and fifteenth centuries a theatre of bloodshed and desolation; the unfortunate sovereigns sometimes in captivity, and generally defeated, without finances, at the head of an exhausted state, had as little means of promoting, as their subjects had leisure for the cultivation of the arts.<sup>a</sup> The strongest expressions are used by the French writers<sup>b</sup> to describe the terror and misery which pervaded the country. The

<sup>a</sup> Lenoir, mentioning the decline of the arts during the fourteenth century, makes this judicious remark:—Les croisades reprisent faveur mais les nouvelles emigrations au lieu d'être favorable aux arts comme elles l'avoient été sous Louis IX. ne servirent qu'à éloigner les succès. Musée, Tom. II. p. 45.

<sup>b</sup> An old writer laments *Bellorum turbines quibus post pugnam Creciacam misere quassata est et attrita Gallia.*—Chron. S. Nic. Rem. p. 638. Les Anglois, dit le Sage, jettassent la peur & la frayeur jusques dans le cœur de la France aussi bien que dans le cœur des François. Du Chesne Recherches des Villes &c. de la France, p. 114.

peasants were forced from their labours, whole districts were laid waste, and the towns impoverished by the heaviest imposts and exactions.<sup>a</sup> In the midst of these evils, which were aggravated by the sufferings of famine and pestilence, we cannot wonder that the piety of the nation was unable to display itself in the construction of religious buildings. The princes of France had more occasion to fortify their cities than to found monasteries; and when their treasures were insufficient to maintain their armies, it is not extraordinary that they afforded but few proofs of ostentatious devotion.

In the earlier part however of the fourteenth century, before the invasion of Edward III, and in those provinces of France which were more remote from the scene of hostilities, several buildings were undertaken. The church of St. Ouën at Rouen, a work justly admired for the delicacy with which the ornamental parts are executed, was begun to be rebuilt by the Abbot, Jean Marc d'Argent,<sup>b</sup> in 1318, and the collegiate church of Ecouis, near the same city, was commenced in 1310, and dedicated in 1313.<sup>c</sup> The cathedral of Bourges was erected

<sup>a</sup> Du Tillet, Chron. p. 63. 67. 75.

<sup>b</sup> John Roussel.—Alien Prior. Vol. I. p. 2.

<sup>c</sup> Millin Ant. Nat. Tom. III. No. 28.

in its present form about the year 1324, by the Bishop Guillaume de Brousse, who rendered it one of the most magnificent churches in Europe.<sup>a</sup> The collegiate church of St. Sepulchre at Paris, was begun in 1326, and finished so as to have mass said in it in the succeeding year, by *Guerin de Lorcignes*, whose name we discover in an inscription above the portal,<sup>b</sup> and who seems from his work to have been an artist of considerable talents. The Pope Benedict II founded the college, and built part of the church of the Bernardines in the same city, about 1335. It appears that *Jean Ravy*, an architect and sculptor, was employed for twenty-six years, at the beginning of this century, at the cathedral of Nostre Dame. The chapels on the north side the nave are supposed to have been erected about this time; it is probable, therefore, that he completed what Jean de Chelles left unfinished, and perhaps he even enlarged his design; it is certain he was engaged on the sculpture of

<sup>a</sup> Felibien Arch. IV. 230.

<sup>b</sup> L'an de grace MCCCXXVII le vendredi devant Noël fut chantée la premiere messe de cette Eglise et les fondemens levez: si comme il appert, par Maistre Guérin de Lorcignes qui eregea ce portail et le fonda premièrement.

This church is in the Rue St. Martin. Millin, Ant. Nat. Tom. III. No. 27.

the enclosure of the choir, which was afterwards completed by his nephew, Jean le Boutelier, in the year 1351.<sup>a</sup>

During the more favourable aspect of affairs which the valour and policy of Charles V procured for France, several considerable buildings were accomplished. The monasteries of the Augustins, and the Celestins at Paris, and the convent of the Trinity near Mantes, were erected by his order, and he augmented by his benefactions the Chartreuse of St. Jean de Liget in Tourraine.<sup>b</sup> The principal edifices, however, which were raised by this prudent monarch were of a civil and military nature. The Bastile and the castle of Vincennes<sup>c</sup> were finished by him, in the last of which he founded, about the year 1379, a magnificent chapel, on the model of the Sainte Chapelle at Paris.<sup>d</sup> The Châtelet, the petit Pont, the Pont de St. Michel, and the walls of the city near the Porte St. Antoine, were likewise of his construction, and he made many important

<sup>a</sup> Felibien Arch. IV. 227.

<sup>b</sup> Maroles, Hist. des Roys, p. 248.

<sup>c</sup> This castle was founded by Philip Augustus, about the year 1185; the great tower was begun by Philip de Valois in 1361, and carried by King John to the third story; it was *finished* by Charles V, as appears from some ancient verses engraved on a tablet in the wall. Du Chesne, Antiq. des Chateaux, &c. de la France, p. 197.

<sup>d</sup> Dom. Felibien, Hist. de Paris, VII. 37.

additions and improvements at the Louvre,<sup>a</sup> and the Chateaux of St. Germain en Laye, Montargis and Creil.<sup>b</sup>

In the reign of his successor, Charles VI, the abbey of Bonport was erected about the year 1387,<sup>c</sup> and some other edifices; but the great work of art which distinguishes the annals of this prince is the fleet and the wooden fortifications which were constructed for the invasion of England. The account of this transaction is particularly curious. Every vessel in the ports from Seville to Prussia was seized upon for the purpose, and a vast number built on the French coast: the whole when collected at Sluys amounted to fifteen hundred sail.<sup>d</sup> The constable of France prepared on board his division, “a town of frame-work, of large timber, which was to be put together on their landing in England, for the lords to retreat to as a place of safety.” It was so contrived, that “when they were dislodged, it could be taken to pieces, roofs and all:” but in his passage from Tregueir in Brittany to join the king at Sluys, his fleet, con-

<sup>a</sup> Charles V was the founder of the Royal Library of France; he placed about an hundred and twenty volumes in one of the towers of the Louvre, which was from hence called *la tour de la Librarie*.

<sup>b</sup> Felibien Arch. 230.

<sup>c</sup> Millin Ant. Nat.

<sup>d</sup> According to the speech of the Duke of Berry, by whose advice the expedition was abandoned. Johnes's Froissart, Vol. III. c. 67.

sisting of seventy-two vessels, was dispersed in a storm off Margate: "some," says Froissart, "were blown into the Thames, where they were captured by the English, and among them was one that had two or three parts of the wooden town on board, and the workmen who were to erect it. They and the town were sent to London, which much delighted the king and citizens."<sup>a</sup>

The architecture of France in the fourteenth century differed in many of its features from that of the thirteenth. The latter style was not immediately disused; several alterations of character however gradually appeared, particularly with regard to the mullion-work of the heads of windows, which in the last century were ornamented with six foils or roses, [in general three in each window;] they now branched out into the form of leaves, and the compartments of the round windows at the ends of churches assumed the same fanciful appearance.<sup>b</sup> In some places we may also observe a richer decoration given to the vaulting of roofs. Similar alterations took place about the same time in England, where, from more fortunate circum-

<sup>a</sup> See the whole account of this interesting event. Johnes's Froissart, Vol. III. c. 58, 59, 65, 66, 67.

<sup>b</sup> Appendix AA.

stances they were carried to a higher state of perfection and magnificence.

The greater part of the *fifteenth century* was equally hostile to the practice of architecture as the fourteenth. It is probable that few buildings, and that none of any grandeur and importance, were undertaken during the incessant and sanguinary contests which ended in the expulsion of the English from France, and restored the monarchy of that nation from the most abject degradation to a state of vigour and prosperity. During this period, however, it appears that the church of St. Ouën at Rouen, was finished by Alexander de Berncual, who died in 1440, and is buried in that edifice, with an inscription on his tomb, declaring that he had been master of the works there.<sup>a</sup> The building of the abbey of Beaubec in Normandy, seems to have been delayed and interrupted by the troubled state of the times. Although it had been burnt in the year 1383, its restoration was not attempted till the middle of this century, and by the steeple not having been begun till 1668,<sup>b</sup>

<sup>a</sup> Cy gist M<sup>e</sup> Alexandre de Berneval, Maistre des œuvres de messonnerie au Baillage de Roüen et de cette Eglise, qui trepassa a l'an de grace 1440 le 5 Janvier. Hist. Abb. Roy. de St. Ouen, Lib. II. p. 197.

<sup>b</sup> Alien Prior, Vol. I. p. 41.

we may suspect that the work proceeded with more than ordinary slowness. The collegiate church of Nostre Dame at Clery, near Orleans, was erected by Louis XI, who also founded the first convent of Minimes in France, in the park of his Château of Plessis, and another at Amboise.<sup>a</sup> The architectural taste of this age resembled the contemporary style of England and other countries. Many instances of tracery may be remarked, especially in sepulchral monuments<sup>b</sup> and chapels;<sup>c</sup> but the distracted condition of France afforded little leisure to her inhabitants for works of piety and genius, and prevented them from adding to the sumptuous structures of their ancestors any great example of that superlative beauty or richness which characterizes the architecture of England at this period.

The time now arrived, when this beautiful species of architecture, which had been successfully cultivated for the space of three centuries, and which has left fabrics that are still the boast and wonder of the principal cities of Europe, was no

<sup>a</sup> Maroles, *Hist. des Roys*, p. 277.

<sup>b</sup> Appendix BB.

<sup>c</sup> The chapel of Charles de Bourbon, Archbishop of Lyons, in the cathedral of that city, is a beautiful instance of this sort, and one of the latest works in the Gothic taste which were produced in France. Charles de Bourbon died in 1478, and what remained to be finished in the chapel was completed by Duke Pierre his brother after his death. *Hist. Litt. de Lyon*, II. c. v. p. 65.

longer to be practised: a new æra in the arts was arising in Italy; the gothic manner in painting, sculpture, and building, began to disappear, and a taste for imitating the works of antiquity was universally diffused. The Italian artists, struck with the noble remains by which they were surrounded, had for some time laboured to throw off the fantastic style of the middle ages; gothic architecture, from various causes, had been practised among them with less effect than in other parts of Europe, and they were possessed of better models to excite and assist them in restoring the taste of ancient Rome. Brunaleschi was the first who endeavoured to reform his countrymen in this respect, and the great minds which were devoted to the arts in the fifteenth century, produced a total revolution in all their branches. Painting and sculpture soon arrived at excellence, but although the Gothic mode in building was laid aside, the style by which it was succeeded had little or no pretensions to classical beauty. Its chief and characteristic feature consisted in carved imitations of the Arabesque designs with which Raffael had adorned the galleries of the Vatican; an idea which he derived from the frescoes in the baths of Livia and of Titus. The richness and variety of these fanciful decorations were well suited to the eyes of those who had been

too much accustomed to a profusion of ornament to relish at once a purer and more simple taste. The political intercourse which at that time connected France and Italy, facilitated the transmission of these innovations, and the reign of Louis XII was marked by the total abandonment of the Gothic manner, and the adoption of the new, which at the beginning of the sixteenth century was successfully practised by a numerous and able school of French artists.<sup>a</sup>

CHAP. I.

THE ABBEY CHURCH OF ST. GERMAIN DES PREZ.

First Church founded in honour of the Relics of St. Vincent, in 557—Description of it—Takes the Name of St. Germain—Pillaged and burnt by the Normans—Rebuilt by Abbot Morard in 990—New Cloister 1227—Refectory and Virgin's Chapel by Pierre de Montereau, 1244—Repairs and Alterations 1644—Original Character and present State of the Building.

THE history of the abbey of St. Germain begins with a curious instance of a treaty of the sixth century. Childebert having declared war against Teudis king of the Visigoths, and overrun the kingdom of Arragon, invested Zaragoza with his troops, and reduced its inhabitants to the last extremity: before however they opened their gates to the enemy, these unfortunate people determined to implore Divine assistance, and for this

purpose they made a solemn procession round the walls of the city, chanting litanies and carrying the shirt of St. Vincent, who having been their fellow countryman, they flattered themselves would be interested in their situation. The procession attracted the attention of the French camp, and it was immediately judged that the besieged had some stratagem in view for their relief. A peasant, who was seized in endeavouring to escape from the town, and conducted into the presence of Childebert, explained the cause of this unusual appearance, and declared the reliance of the citizens in the efficacy of the sacred shirt. The French princes were so struck by this, that they directly granted them peace upon the following conditions: First, that Arianism should be extirpated from Spain, and secondly, that the shirt of St. Vincent should be surrendered to the French.<sup>a</sup> Satisfied with this achievement,<sup>b</sup> Childebert returned in triumph

<sup>a</sup> Hist de l'Abbaye Royale de St. Germain des Prez par Dom. Jacques Bouillart, No. I. i. Greg. Tur. Hist. France, III. c. 10.

<sup>b</sup> The story is related with more probability in Gest. Reg. France, c. 26, and Aimoin, Hist. Lib. II. c. 2. It appears from these, that Childebert having pressed the inhabitants of Saragossa with a long siege, and wishing to retire without dishonour, sent for the bishop, and demanded of him the relics of St. Vincent, preserved in the cathedral, as the price of withdrawing his army. The bishop immediately delivered up the holy shirt, and the French king returned with his trophy to Paris.

to Paris, carrying with him the holy shirt and a large cross which he had taken at Toledo. Soon after his arrival, St. Germain, the bishop of Paris, persuaded him to build a church in honour of these sacred trophies. The site was chosen in a meadow on the banks of the Seine, near the metropolis, in which it is said some remains of a temple of Isis still existed.<sup>a</sup> The church was begun about the year 557, and finished in 558; Childebert added a monastery to it, over which St. Germain appointed Droctovius the first abbot.

The church is described in terms of considerable magnificence. The cruciform shape is said to have been adopted in honour of the cross of Toledo; the fabric was sustained by large marble columns, the ceiling was gilt, the walls painted on a gold ground, the pavement composed of rich mosaic, and the roof externally covered with gold: in consequence of which profusion of splendour it was called St. Germain *le doré*. An altar was placed at each extremity of the edifice, and an oratory dedicated to St. Symphorien was erected by St. Germain, on the southern side of the entrance, in which he was afterwards buried by his particular desire; and on the northern side another was raised in honour of St. Peter.<sup>b</sup> However we

<sup>a</sup> Appendix DD.

<sup>b</sup> Bouillart, Hist. I. 5.

may be inclined to suspect exaggeration in some parts of this description, especially as it was written after the church had been twice burnt by the Normans;<sup>a</sup> in most of its particulars it is by no means irreconcilable with the authentic accounts of the religious buildings of that period, which we have already described.<sup>b</sup> It was probably of no great extent, but though rude and barbarous in taste, it might still be gaudy and brilliant; the columns were perhaps of stone instead of marble,<sup>c</sup> and the gilded ceiling was probably confined to the apsis, as there can be little doubt that the body of the church was covered, as was usual, with the naked timbers and frame-work of the roof, which on the outside might be decorated with tiles of gilt bronze. It is certain, although lead was more commonly used, that this expensive ornament was not unknown in France at this time, and the title of *St. Germain le doré*, may dispose us to believe that it was adopted in the present instance.

The period at which the church acquired the name of *St. Germain* is doubtful; it was not at any rate till after the death

<sup>a</sup> This description is given by Gislemare, a monk of the abbey, who lived at the end of the ninth century. *C'est à dire, says Felibien, après que les Normands y avoient déjà mis le feu deux fois. Hist. de Paris, I. 27.*

<sup>b</sup> See Part I. c. 3.

<sup>c</sup> Appendix EE.

of the founders. At first it was styled indifferently the church of the Holy Cross, or of St. Vincent, or both. St. Germain, in his deed of donations, adds the name of St. Stephen; and Childebert, in his charter, besides these, mentions at least a dozen other saints, whose relics were preserved in the abbey. The ceremony of dedication was performed on the 23d of December 558, a short time before the death of that monarch, who was buried near the high altar at the eastern end of the building.

A writing containing a donation of Bertram, bishop of Mans, in which this church is called the New Building of Chilperic, has induced a belief that it was rebuilt in so short a time as twenty years after its original foundation,<sup>a</sup> which is very improbable. It seems more likely that Chilperic reconstructed the oratory of St. Symphorien,<sup>b</sup> and perhaps made some further additions or improvements; but the question is of little moment.

Soon after the advancement of Pepin to the throne of France, it was proposed to him by Lantfroy, abbot of St. Vin-

<sup>a</sup> Bouil. Hist. I. 8.

<sup>b</sup> Bouillart produces some strong arguments in favour of this opinion, in his *Response aux Remarques*, &c. which is subjoined to his history, p. 307.

cent, to give a more honourable sepulture to the body of St. Germain, by transferring it from the chapel of St. Symphorien, into the nave of the church: the king approved the design, and desired to be present at the ceremony. The translation took place on the 25th of July, 754. On the preceding day the tomb of the saint was opened, and the body conveyed to the end of the nave of the church, where it remained during the night, which was passed by the convent in prayer and psalms of thanksgiving: in the morning the king arrived, accompanied by his son Charles [le Magne], who was then but twelve years old, attended by the bishops and nobles of his court, and a vast concourse of people. Pepin himself, and the chief persons of the assembly, assisted in carrying the body to the grave which was prepared for it, behind the altar of the Holy Cross, in the eastern part of the building; and at the close of the ceremony he made several grants of lands, in the neighbourhood of Paris, to the abbey.<sup>a</sup> Miracles are said to have been wrought on this important occasion, and it is added by the Monkish historian,<sup>b</sup> that Charlemagne used afterwards to take great pleasure in relating them, with all their particulars. From the period of this translation it is supposed that the name of

<sup>a</sup> Bouil. Hist. II. 1, 2.

<sup>b</sup> Gislemare.

St. Germain came to be generally received as the distinctive title of the church and monastery.<sup>a</sup>

The Normans, about the year 845, made a dreadful irruption into France; an army of them, led by Regner, arrived in sixty vessels at the mouth of the Seine, where they landed without resistance, and proceeded in their course of devastation towards Paris, burning towns and churches, and committing every other act of barbarity. Upon the first alarm of their approach the monks of St. Germain opened the tomb of their saint, and retired with his body to Coulaville, in Brie, a village belonging to the abbey. From this moment till the year 888, the Normans made continual ravages around Paris, which they besieged in 884 with great fury, but were repulsed by the valour of the inhabitants, directed by Eudes and Gozlin, the count<sup>b</sup> and bishop of the place: at length returning for the fifth time in 888, they were totally defeated by Eudes, who

<sup>a</sup> Appendix FF.

<sup>b</sup> After the residence of the kings at Paris, the administration of justice and the defence of the city were intrusted to the counts; they combined the functions which were exercised by the provost and governor in modern times; the office became hereditary about 936, which occasioned the appointment of viscount, who executed the former duties of the counts: in 1032 Count Odo dying without children, the dignity was united to the crown. Felibien, *Hist. de Paris*, Liv. II. 16. III. 24.

from the infancy of the heir to the throne, and the distressed situation of France, had been elected king by the nobles of Neustria.<sup>a</sup> A treaty of peace was concluded in 911 by Charles the Simple, who had succeeded to the government, with Rollo the Norman chief, who being baptized by Franco Archbishop of Rouen, was acknowledged Duke of Normandy, and received the hand of Gisle, the daughter of the king, in marriage.<sup>b</sup>

Previous to this event the abbey of St. Germain had suffered severely; it had been frequently pillaged, and three times burnt: besides which, the revenues of the abbacy had been taken from it, and from 923 to 960 were possessed by laymen.<sup>c</sup> In process of time, however, the monks regained their privileges, and in 990 Morard, a man of talents and public spirit, was appointed to the office of abbot: perceiving that his church required great repairs, those that had taken place since its ruin by the Normans, having been hastily and slightly executed, he resolved to pull it down entirely and rebuild it from the foundations; in this design he was assisted by the munificence of Robert the Pious, and he had the satisfaction of completing the structure, nearly as it exists at present, before

<sup>a</sup> Bouil. Hist. II. 10 & seq.

<sup>b</sup> Marole's Hist. p. 133.

<sup>c</sup> Bouil. Hist. II. 30, during this interval the abbey was governed by deans.

his death, which happened in 1014.<sup>a</sup> We learn from the inscription,<sup>b</sup> which was formerly legible on his tomb, that he added to the church a tower containing a bell.

It is remarkable, that the dedication of the new fabric did not take place till the year 1163, when it was performed with peculiar solemnity by Alexander III, who had at that time taken refuge in France. He was attended by twelve cardinals, and a great number of bishops and clergy, from the principal states of Europe; the procession moved three times round the interior and exterior of the church, sprinkling the walls with holy water. The high altar was then consecrated in honour of the Holy Cross, and the Martyrs St. Stephen and St. Vincent; the pope standing opposite the centre of it, and a bishop at each corner, who, dipping their fingers in holy oil, marked it in those several places with the sign of the cross. The relics were deposited by the pope beneath the altar, while the Bishop of Ostia, and three other prelates, dedicated some of the chapels. After the ceremony was concluded the pope proceeded to the meadow without the walls of the abbey, and in an address to the people publicly confirmed several valuable privileges of the convent.<sup>c</sup>

<sup>a</sup> Bouil. Hist. III. 2.

<sup>b</sup> Appendix GG.

<sup>c</sup> Bouil. Hist. III. 20

The old cloister, which was greatly decayed, was taken down in 1227, and another completed in the course of the same year by the abbot Eudes.<sup>a</sup>

A new refectory was commenced by the abbot Simon in 1236,<sup>b</sup> and in 1244 the grand chapel of the Virgin was undertaken, during the government of Hugue d'Issy.<sup>c</sup> These exquisite specimens of Gothic architecture were built from the designs of Pierre de Montereau, and are remarkable examples of his extraordinary taste and skill.<sup>d</sup> The chapter-house, and the beautiful chamber which adjoins it, were constructed about this time, over which the abbot Gerard began to erect the dormitory in 1273: the prior's lodging, and some other parts of the monastery, are works of the same period.<sup>e</sup> The monks of St. Germain continued to sleep in their dormitory, according to the rule of St. Benedict, till about the year 1513, when the more convenient reform of separate bed rooms was introduced.

At the beginning of the war with the English, in 1368, Charles V sent an order to the abbot Richard, desiring him to build new walls and towers, and to put the abbey in a state of defence, which he performed with great alacrity.<sup>f</sup>

<sup>a</sup> Bouil. Hist. III. 48.

<sup>b</sup> Ib. III. 52.

<sup>c</sup> Ib. III. 54.

<sup>d</sup> See Part II. c. vii.

<sup>e</sup> Bouil. Hist. III. 63.

<sup>f</sup> Ib. IV. 9. See also Pl. IX.

A brazen eagle for the choir, and a new shrine for the relics of St. Germain, were executed about the year 1408, by some skilful artists of Paris, employed by the abbot William. The shrine was composed of gold, silver, brass, and precious stones, formed into the shape of a Gothic church. The brazen front of the high altar, which was made in 1236, was re-cast and gilt at this time, and probably by the same workmen.<sup>a</sup> The altars of the chapels which, according to the ancient custom, stood insulated, and were open behind for the reception of relics, were placed close to the walls, by order of the abbot William V, about the year 1528, and were re-consecrated in consequence of this change.<sup>b</sup> A new cloister was erected in 1555, and in the course of the next year the high altar, which had been dedicated by Alexander III, was destroyed to erect another in the taste of the sixteenth century: upon opening this venerable monument, the monks anxiously looked for the shirt of St. Vincent, the pious gift of Childebert, but the only thing they discovered was a glass phial filled with relics, which were reduced to powder, and a few bones, which they believed to be those of St. Stephen and St. Vincent, deposited by the pope on the day of consecration.<sup>c</sup>

<sup>a</sup> Bouil. Hist. IV. 14.

<sup>b</sup> Ib. V. 5.

<sup>c</sup> Ib. V. 12.

The church seems to have been greatly out of repair about the year 1579,<sup>a</sup> but the consternation which the Huguenots spread throughout France,<sup>b</sup> prevented the monks for some time from attending to the state of their buildings. After the public profession of the Roman Catholic religion, however, by Henry IV, in 1592, several repairs and alterations were made in the abbey,<sup>c</sup> and in 1644 the restoration of the church was undertaken. It was now in a most dilapidated and dangerous condition: the nave was covered in some parts with the remains of the broken ceiling, and in others only by the tiles of the roof. The pavement was so sunk that it was necessary to descend into it by steps, and the vaulting of the transept threatened to fall in; many of the windows were built up, the capitals of the pillars were defaced, and the walls covered with dirt, and in several places had lost their plaister. The whole of these deficiencies were repaired in the course of two years at the expense of the convent. The nave was for the first time vaulted with stone, and the vaulting of the transept renewed; the pillars were ornamented with composite capitals, some of the windows enlarged, the walls refreshed with plaister and faced, those of the transept rebuilt of stone, with windows of greater

<sup>a</sup> Bouil. Hist. V. 20.

<sup>b</sup> Appendix HH.

<sup>c</sup> Ib. V. 26.

dimensions, and a new door to the south; the roof of the nave and transept was covered with slate, and an alteration was made in the disposition of the choir, the fabric of which appears to have been the only part of the church which had been kept in sufficient repair.<sup>a</sup> These works were accomplished in 1646, and in this state has this venerable structure remained to the present times.

Its original character has been little affected by the changes which it has undergone, and it still presents a striking and curious exhibition of the architecture of France at the beginning of the eleventh century. The building is considerable, but the exterior possesses no remarkable feature, and excites no other interest than is derived from a knowledge of its antiquity. Within, it is low, mean, and badly lighted; and though it may shew less rudeness, it has none of the majesty of our Norman churches. The west end is terminated by a tower, besides which two others, a northern and a southern, are situated in the angles formed by the body of the church with the east sides of the transepts. The western tower is thought by many French antiquaries to be part of the edifice of Childe-

<sup>a</sup> Ib. V. 41. Felibien. Hist. de Paris, Tom. II. liv. xxvii. 77.

bert.<sup>a</sup> Bouillart, the historian of the abbey, is of this opinion. By others it has been considered of the age of Pepin and Charlemagne; all that can be determined with certainty is, that it is older than Morard's church; a fact which may be discovered from the difference of the stone and its ruder construction: indeed as to this point there is no dispute: with regard to the question whether it was built in the reign of Childebert, or later, (since we know that the French erected stone towers to their churches in the eighth century;<sup>b</sup> and as we have no good authority that they were in use in the sixth,) it is most reasonable to coincide with those who place its foundation in the time of Pepin and Charlemagne.

The statues with which the portal of this tower is decorated, have also been an object of speculation among antiquaries;<sup>c</sup> some, as in the former case, deciding them to be of the age of Childebert, and others of Charlemagne: but in arguing this point, they seem to have fallen into the strange mistake of supposing that the tower itself, and the ornaments of its gate, must necessarily have the same date; and that if the figures can be

<sup>a</sup> Some have even carried its antiquity still higher, and supposed it a remnant of the Temple of Isis! Felib. Hist. Paris, I. 32.

<sup>b</sup> See Part I.

<sup>c</sup> See Response aux Remarques, &c. annexed to Bouillart's History.

proved to represent the family of Childebert, or of Charlemagne, it follows that they were placed there by those monarchs; a reasoning which can never be admitted as conclusive, and which we may be able to show, in the present instance, is in all probability erroneous. The portal, which is the subject of debate, was unfortunately destroyed during the late revolution,<sup>a</sup> until which period it remained in good preservation:<sup>b</sup> now it appears next to an impossibility, that a gate ornamented with eight large statues, a gate too of a place of worship, a circumstance so peculiarly calculated to excite the destructive rage of Vandalism, and which actually did excite that of the Vandals of the eighteenth century, should have escaped untouched from the still more sweeping fury of the barbarians of the eighth; by whom the neighbourhood of Paris was invaded five successive times, and who frequently pillaged, and three times burnt this very church. These considerations, notwithstanding it seems ascertained that two of the figures are of the family of Childebert, must incline us to believe, that this portal was the work of the abbot Morard, who, from his respect to the memory of the founder, might place his statue there with those of his father and

<sup>a</sup> An accurate representation of it is given in Bouillart's History.

<sup>b</sup> Tout entier et bien conservé. Lenoir. Musée, p. 91.

brother: or, it is still more probable, that finding some mutilated statues of St. Germain and the family of Childebert remaining on the front of the ancient church, he might have ordered that the new portal should be ornamented with figures of the same persons. In this manner, when the refectory was rebuilt by Pierre de Montereau, an old statue of Childebert above the door was replaced by a new one.<sup>a</sup> The miserable taste<sup>b</sup> of these figures, on which is grounded an argument for their high antiquity, applies equally well to the sculpture of the eleventh as to that of the sixth century: when therefore we take into consideration the fury of the Normans, the exposed situation of the statues,<sup>c</sup> and their perfect state at the time of the revolution, we can scarcely assign them an earlier date than that of Morard's church. We may observe too, in confirmation of this opinion, that the capitals of the columns which separate the different figures, are, in some instances, rude imitations of the Corinthian order, and in others a grotesque mix-

<sup>a</sup> Bouil. Hist. III. 51.

<sup>b</sup> Gout pitoyable.

<sup>c</sup> Felibien, speaking of the tomb of Childebert, Hist. Par. I. 32, observes, "Il est plus que probable qu'il ne fut pas plus respecté dans les ravages des Normans que tant d'ornemens magnifiques dont l'église mesme étoit décorée." This reasoning applies with greater force to the statues of the portal, which were more exposed to their fury than any other ornaments of the church.

ture of birds, griffins, and flowers, very similar to those of the interior of the building. It is also worthy of remark, that the whole portal, with its statues of kings with disks or nimbes behind their heads, bears a close resemblance to that of the cathedral of Chartres, which was certainly erected in the eleventh century.

We discover from the epitaph of Morard, that in addition to the church he constructed a tower containing a bell; the claim of that at the western end of the building to an higher antiquity seems indisputable, and of the two others, it is probable, as Bouillart suggests, that Morard raised that on the north side of the church near the dormitory.<sup>a</sup> The southern tower appears to have been erected for the sake of uniformity, by some of his successors, during the eleventh century; the upper stories of all of them are evidently of a later date, and from their narrow pointed windows, it may be judged, that they were finished in the course of the succeeding century; perhaps by the abbots Thibaud or Hugues de Monceaux, in whose time the church was dedicated.<sup>b</sup>

It is not difficult to distinguish the remains of Morard's building from the alterations of subsequent periods. The

<sup>a</sup> Bouil. Hist. III. 2.

<sup>b</sup> Felibien. His. de Paris, Liv. IV. 70.

lower walls of the choir and nave, the eight eastern chapels, most of the columns and arches of the nave, and all the columns and arches of the choir, are undoubtedly parts of this ancient structure. The most material changes which it has since undergone consist in the vaulting the choir, which Bouilart thinks took place in the fourteenth century;<sup>a</sup> and the vaulting the nave, and the rebuilding nearly the whole of the transept, which we have already related, was executed about the middle of the seventeenth.

It has been remarked, that the interior of the church is low and gloomy, being principally lighted by small windows resembling those of our Saxon buildings, but the columns and arches, which form the chief features, are well worth attention, particularly those of the choir, which have remained unaltered since the time of Morard: their general proportions, and those of the capital to the shaft, nearly approach the Roman standard for the Corinthian order, which is in many of them closely imitated: others exhibit a sort of arabesque composition of griffins and birds,<sup>b</sup> still however retaining the Corinthian leaves and volutes, and each is correctly finished with astragals and

<sup>a</sup> Bouil. Hist. p. 310.

<sup>b</sup> An engraving of one of these capitals is given in Mus. des Mon. Fran. Pl. 60.

an abacus. Here columns support a series of round arches, except in the semi-circular arcade<sup>a</sup> at the eastern end of the church, where they are *pointed* in consequence of the arrangement of the pillars, which being placed in the bow nearer each other than where the colonnade proceeds in a straight direction, the arches which rise from them, when brought to an equal height with those of a round shape, become necessarily pointed; and this is among a number of instances where the POINTED ARCH was used *from accident and necessity before it became an object of taste.*<sup>b</sup>

This venerable fabric, so interesting to the history of the arts, was converted at the beginning of the revolution into a manufactory of salt-petre, but since the re-establishment of religion, it has been restored to its proper use; and although the buildings of the monastery are destined to destruction, its preservation is secured by its being appointed a parish church of the metropolis.

<sup>a</sup> The round point.

<sup>b</sup> The same circumstance occurs in the crypt of St. Denis. See Part II. c. 3. In the choir of the church of La Charité sur Loire, and at the east end of Canterbury cathedral, built between 1180 and 1185, where “the arches are some circular, others mitred; for the distances between the pillars here diminishing gradually as we go eastward, the arches, being all of the same height, are mitred (i. e. pointed), to comply with this fancy, so that the angles of the eastern ones are very acute.” Gostling’s Canterbury, p. 224.

## CHAP. II.

## THE ABBEY OF ST. GENEVIEVE.

The Church founded by Clovis, and dedicated to St. Peter and St. Paul—  
Subsequently dedicated to St. Genevieve—Rebuilt by Stephen of Tournay,  
in 1177—Description of the Building.

AN island on the Seine, surrounded by forests and marshes, was naturally seized upon as a place of security in early barbarous ages. In this place, and probably from these motives, the ancient Celts founded a town, which has since become the capital of the French empire. Its small and simple original did not extend beyond what is called L'Isle de la Cité, which still retains the metropolitan church, and palace of justice, the ancient residence of the counts of Paris.<sup>a</sup> It seems however to have been considerably increased under the Romans; many of the emperors, particularly Julien, carried their troops into winter quarters there;<sup>b</sup> and from the remains of ancient baths,<sup>c</sup>

<sup>a</sup> Felibien. Disc. prelim. 4.

<sup>b</sup> Felib. Liv. I. 7. et seq.

<sup>c</sup> Il est vrai que le tems ne nous a conservé de ces anciens monumens qu'un morceau à demi ruiné d'un fort grand edifice qu'on appelloit autrefois le Palais des Thermes proche les Mathurins. Felib. I. 8.

as well as other circumstances, it appears that an addition to the city had been made on the southern bank of the river, and probably in other places.

After the conversion and triumph of Clovis, he brought his treasures to Paris, which he chose for his residence and the capital of his kingdom. At first, perhaps, he resided in the palace of the Thermæ, or baths, which had been inhabited by the emperors Julian, Valentinian, and Gratian; but he is related to have afterwards founded a palace for himself and his court, on the rising ground near the southern suburb of the city; and at the same time he erected a church adjoining to it in honour of St. Peter and St. Paul, where he was interred, though it was not entirely finished at his death, A. D. 511. This pious work he is said in his epitaph to have undertaken upon the persuasions of Saint Clote, or Clotilde, his wife, and “Madame Sancte Genevieve,” a lady<sup>a</sup> whose legend abounds with miracles and austerities, and who afforded the Parisians such ample proofs of her protecting power when alive, as to

<sup>a</sup> St. Genevieve is said to have been born at Nanterre in 420, and many wonderful particulars are related of her life (Millin. Tom. V. p. 60); her name is probably a corruption from Janua Nova; and her existence, as well as her history, is supposed by many to be a monkish fable.

induce their posterity to trust to the efficacy of her dead body for ages afterwards. This precious relic was deposited under the choir of the church of St. Peter and St. Paul, or, as it was often called, of the Holy Apostles; but a long and splendid course of miracles operated by it, gradually undermined those ancient titles, and (as was the case with the neighbouring abbey of St. Germain des Prez) at length by common consent it obtained the name of St. Genevieve.

During the ravages of the Normans in the ninth century, this edifice suffered together with every other in the neighbourhood; and it is curious to remark, that the holy body of the Saint was not permitted by the monks to afford protection to its peculiar sanctuary, but was carried by them within the walls of the city, where it reposed, and diffused around it an imaginary security.<sup>a</sup> In the meantime its deserted church was burnt by the Normans, which misfortune is said to have been three times repeated.<sup>b</sup>

After the establishment of the Normans in Neustria by the peace, A. D. 911, a general repair and re-building took place among the churches which their ravages had destroyed.

<sup>a</sup> Felib. Lib. III. 6. Ib. 10.

<sup>b</sup> Felib. Lib. II. 59. A. D. 846, 857, 892.

The church of St. Genevieve was repaired by Robert the Pious, at the beginning of the eleventh century ; he also added to it a cloister which was demolished in the reign of Francis I. It appears, however, that this repair by K. Robert was slight and inconsiderable, since some writers scarcely notice it :<sup>a</sup> and we learn, that in the twelfth century the church was in so ruinous a state, as to determine the Abbot Stephen, known by the title of Stephen of Tournay, <sup>b</sup> who was elected, A. D. 1177, to undertake its complete restoration. It still exhibited traces of the fire of the Normans, and the walls were greatly damaged in several places ; these he repaired, and vaulted the church with stone as it remains at present. He also restored the chapter-house, cloister, the great chapel of the Virgin, and all the offices of the monastery : having completed these works, and obtained several privileges in favour of his abbey, he was elected bishop of Tournay, A. D. 1192.

This abbey-church is perhaps the most interesting and venerable relic in France, since it is highly probable that the disposition of it, and some part of the existing walls, may be

<sup>a</sup> Felibian seems to think it too trivial to record, vide Lib. III. 38.

<sup>b</sup> The life and letters of this abbot were published by the Pere Claude de Moulinet, canon regular of St. Genevieve, A. D. 1679.

of the age of Clovis: its size and shape, without transepts, but with a circular termination, favour this supposition. It seems certain, both from history and from observation, that the church was not rebuilt by Robert the Pious, or by Abbot Stephen, but merely repaired by them. The small size, as well as shape of it, are decidedly in favour of this supposition; for we cannot conceive that so illustrious a church as that of St. Genevieve, would have been rebuilt in the eleventh or twelfth centuries on so small a scale and without transepts, which were then every where adopted in France. The façade is only remarkable for its great nakedness; it consists of three pointed arch portals, ornamented with small coupled columns, the capitals of which are composed of ivy leaves; above the centre door is a plain rose window, the other windows are long and lancet shaped; the whole is surmounted by a massive and plain pediment.

The three portals which exist at present, cannot be those which were built by the canon Mignard, in the time of Hugh Capet, but were most likely erected after the repair of the church was finished by the successor of Stephen. Remains of painting are still visible in the arches over the doors. The interior of the church is mean and gloomy, lighted only by

narrow windows. An old column near the door, on the north side, leading to St. Stephen's church, is supposed to be a remnant of the original fabric. The nave is separated from the aisles by eight columns, four of which are larger than the others, and their capitals are completely Lombard ; a mixture of leaves, birds, &c. in a similar style, though not bearing the same classical proportion to the shaft, as those of St. Germain des Prez : the capitals of the four smaller columns are ornamented with acanthus leaves. Upon these capitals rest clusters of small pillars and pointed arches, which support the roof ; these were put up by Abbot Stephen, a century later. The mosaics, which decorated the church of Clovis, were removed by Abbot Stephen. The tower is of different dates ; the lower part, of the eleventh century ; the upper, except the spire, was built by Thibaut, <sup>a</sup> precentor of the church, in the twelfth century.

This monument is valuable, not only from its exhibiting

<sup>a</sup> Millin, Tom. V. p. 58. *Felib. vie des Architects*, 212. Millin seems to think, that the present façade was the work of Robert the Pious, in the eleventh century, but the pointed arches are against this supposition ; and if it be true, as he afterwards mentions, that the mosaics of the time of Clovis were existing when Stephen repaired it, it is impossible it should have been rebuilt by K. Robert.

the exact shape of the early French churches, but also from affording a specimen of the narrow lancet window, which is very rare in France. It is, however, too mixed and mean a structure to afford a fair specimen of the early Gothic of that country.

A central school is now established in the abbey of St. Genevieve, but the church itself seems consigned to decay.

## CHAP. III.

## S T. D E N Y S.

Foundation of the church by Dagobert.—Its restoration by Suger in 1140; repairs under Eudes Clement 1231, and Mathieu de Vendosme in 1281.—Description of the church, and first instance of the pointed arch.—Remarks on the comparative state of Gothic architecture in France and England.—Present situation of the church.—The crosses on the road to St. Denis from Paris.

THE foundation of this abbey is as usual involved in the obscurity and fables of antiquity; it is well known, that Saint Dionysius, or Denis, has long enjoyed the reputation of having been the first preacher of the Gospel to the Gauls; and it is also related, that he crowned his labours by a glorious martyrdom; but where and when these things happened seems to be a matter of controversy among the monks themselves. We shall therefore content ourselves with merely giving the general outline of what they agree to consider as established history.

The \* persecutors of St. Denis; fearing the zeal of the Chris-

\* Histoire de l'Abbaye Royale de Saint Denis en France, par Dom Michel Felibien, Religieux Benedictin de la Congregation de St. Maur. Lib. I. p. 1.

tians should lead them to shew honour to the bodies of their apostle and his fellow martyrs, Rusticus and Eleutherius, commanded that they should be privately conveyed to a distance, and plunged into the Seine. A female, however, named Catalla, who, though a Pagan, had conceived a respect for the remains of these holy men, invited the persons employed on this service to eat in her house ; and while they were thus engaged, she ordered her servants to carry off the bodies, and bury them in a field six miles from Paris. She then had the field sown with corn, the better to conceal the place of their sepulture ; and after the fury of the persecution had subsided, she erected a monument over their remains. The Christians now flocked to the spot, where, induced by a succession of supposed miracles, they erected a church to the honour of the principal martyr.

These events are supposed to have happened about the middle of the third century ; in the fifth <sup>a</sup> we have notice of the church having been rebuilt, through the influence of Sainte Genevieve, assisted by Genés, and several other priests of Paris : the place was at that time called Vicus Catholiacensis, or Catulliacus. <sup>b</sup> Some records remain, which seem to prove that a

<sup>a</sup> Hist. de St. Denis, Tom. I. p. 3.

<sup>b</sup> Ib. p. 5.

monastery was established here even before the reign of Dagobert, who has generally passed for its founder; but the new existence he gave to it by ample endowments, and by rebuilding it in a more sumptuous manner, certainly affords him a fair claim to the title.<sup>a</sup> He is said, by a writer who is entitled to some credit, to have begun this great work a short time after the death of Clothaire II. when he had succeeded in uniting the states of Neustria and Burgundy with the kingdom of Austrasia, which he had already governed six years. Felibien places its commencement about the year 629. The new church is as usual described in lofty terms: the anonymous author before mentioned, and after him Aimoin, informs us, that no expense was spared to make this edifice the most magnificent in France; that it was executed with consummate art; that it had columns, which, as well as a variety of ornaments and the pavement, were all of marble. The interior was brilliant with gold, jewels, and precious stones, particularly the shrine of the saint, which was executed, at the request of Dagobert, by St. Eloy; whose reputation for skill in

<sup>a</sup> Hist. de St. Denis, Tom. I. p. 7. The anonymous author of the *Gesta Dagoberti Regis*; a monk of St. Denis, and who appears to have lived about 150 years after Dagobert.

the arts, was as great as for the sanctity of his life. S. Ouen has left us a description of this monument: he remarks that it was constructed on the same plan as the tombs of other martyrs, being elevated over the body, and supported by columns of marble: the front very rich with gold and precious stones. An altar stood before the shrine, its sides formed of pannels of wood, ornamented with golden branches in relief, bearing fruit made of gold and gems; the covering of the top was silver. It is further added by this anonymous monk, that the roof of the building, immediately over the altar, was externally covered with pure silver; but as he did not live till after the roof was destroyed, it will be difficult to credit him in regard to the purity of the metal, though it is probable that the roof of the sanctuary might be covered with brass tiles either silvered or gilt.\*

Dagobert's church of St. Denis, although erected near a century later than that of Childebert, which was described in the last chapter but one, was probably built much after the same fashion; oblong, with a round termination, having marble columns internally, and a great profusion of mosaic work.

\* See Appendix II.

Besides the church, Dagobert built the cloister and offices of the monastery, which he endowed with several rich possessions. \* In the course of the succeeding century, the church of Dagobert was taken down, and a new one, upon a grander scale, begun to be erected by Pepin, which was completed under his son Charlemagne, and received consecration, in the presence of the court, in the month of February, 775.

While this work was carrying on, an accident happened to one of the artists, named Airard, who, hastening to obey some order of the Abbot Fubrad, fell from the scaffolding of the tower, but miraculously escaped without the slightest injury. This person is supposed, by Felibien, to be represented on one of the gates of the church, where the habit in which he is clothed, and the inscription beneath him, shew that he was (as was usual in those ages) a monk of the abbey.

The Normans, under the command of Regnier, ascended the Seine to Paris about the year 846 ; when the king resolved to protect the sanctuary of his patron saint from violence, and a sum of money induced the invaders to suspend their operations for a time, and retire. Shortly afterwards, as might be

\* Hist. S. Den. ii. 10.

expected, they returned with a larger force to pursue their career of bloodshed and plunder. France was reduced to the lowest state by these irruptions, till, in 858,<sup>a</sup> the power of the invaders was at such an height, that all the monasteries in the neighbourhood of Paris retired with their relics to distant places of safety. Among others the monks of St. Denis carried their relics to Nogent sur Seine, where they concealed them.<sup>b</sup> The Normans entered the abbey the 20th of October, 865, and continued in it for three weeks; during which time the rich gifts laid up there by so many kings, became the spoil of the pirates; who, as the old monk writes, loaded their vessels with them as freely as if they had been merchandise in one of their own ports. Charles carried his court to St. Denis in 869,<sup>c</sup> and remained there the whole Lent, during which time he caused the monastery to be completely surrounded by a fortification of wood and stone.

<sup>d</sup>It appears that the Abbey of S. Denis was very early possessed of lands in England, and that the apostle of France was held in the highest estimation by many of our kings, particularly Edward the Confessor, who made a grant to the

<sup>a</sup> Hist. St. Den. ii. 28.

<sup>b</sup> Ib. ii. 32.

<sup>c</sup> Ib. ii. 34.

<sup>d</sup> See Appendix KK.

abbey of the lands of Tinton,<sup>a</sup> in Oxfordshire, probably by the persuasion of Baldouin, his physician, who was a monk of St. Denis.

In the year 1122, upon the death of Adam, the persecutor of Abelard, Suger was elected abbot. The abilities of this great man soon raised him above the narrow sphere of his cloister, and, after holding many distinguished offices in the preceding reign, he was nominated regent of France by Louis VII. upon the departure of that monarch for the Holy land.<sup>b</sup> His political employments, however, do not seem to have withdrawn his attention from the abbey over which he was appointed to preside; for, having already repaired the other parts of it, the dormitory, refectory, the apartments of the pilgrims, and the offices of the monastery, and having rebuilt and embellished the great entrance, he determined on giving a more magnificent air, and more ample dimensions to his church; and, as he was particularly skilled in the science of architecture, he took the direction of the work into his own hands.<sup>c</sup> The extent and nature of his restorations are involved in some degree of obscurity, both from the manner in which

<sup>a</sup> See Appendix LL.

<sup>b</sup> In the year 1147.

<sup>c</sup> Hist. St. Den. iv. 7.

they are mentioned in the ancient records,<sup>a</sup> and the subsequent alterations which the church underwent in the succeeding century. It appears, however, that his plan did not extend to an entire new fabric; but that having restored the west front and the towers, which were in a more decayed state than the rest of the edifice, he then turned his attention to the interior, for the embellishment of which, he at one time determined to send for marble columns from Rome;<sup>b</sup> but this design was relinquished, upon his finding unexpectedly a vein of stone of superior quality in a quarry near Pontoise. His zeal in the prosecution of this undertaking was warmly seconded by that of the people, particularly of the peasantry, who ran in crowds to assist in transporting the burdens at the command of the abbot. The most experienced and excellent artists were collected from all parts of France, and so active was Suger himself in the superintendence of the work, that when wood was

<sup>a</sup> *Le Livre de l'Administration Abbatiale de l'Abbé Suger*, is written in the first person, as if by Suger himself; but as some of the MSS. bear the name of William, his secretary, it has been conjectured, though apparently with little reason, that he was the author of it, as well as the other little tract published by M. Duchesne, *Le Livre de la dedicace de l'Eglise de St. Denis*, which is written and signed in the same way.

<sup>b</sup> See Appendix MM.

wanted for the beams of the roof, and his own carpenters and those of Paris declared that none could be found in that neighbourhood, he is related to have led them into the forest of Chevreuse, and, with his own hand, to have marked the trees proper for the purpose.

A part of the church being completed,<sup>a</sup> Suger invited Hugh, Archbishop of Rouen, and several other prelates, to assist in the dedication, which took place in the year 1140;<sup>b</sup> on this occasion the whole assembly entreating Suger to pursue the work still further, he determined to rebuild the upper end of the church, which is called the Chevet, or round point. When the foundations had been dug, and every thing prepared for erecting the structure, the king, and a vast number of prelates and nobles, on Sunday the 14th of June, 1140,

<sup>a</sup> It appears, from the Liv. de l'Adm. Abbatiale, that this first work of Suger consisted in enlarging the nave and widening the front of the church. *Accessimus igitur ad priorem Valvarum introitum, et deponentes augmentum quoddam quod à Karolo Magno factum perhibebatur, ibidem manum apposuimus, et quemadmodum apparet, et in amplificatione corporis ecclesiæ, et introitus et valvarum triplicatione, turrium et altarium erectione instanter desudavimus* cap. xxv. de Ecclesiæ primo augmento.

<sup>b</sup> A record of this date was placed, in gilt letters, over the great entrance.

*Annus Millenus et Centenus Quadragenus*

*Annus erat Verbi quando Sacrata fuit.*

assisted in laying the first stones: they descended into the trenches with the sacred relics, singing the 86th Psalm, “*Fundamentum ejus in montibus sanctis;*” and it is related that while they were chanting the verse “*Lapides pretiosi omnes muri tui,*” many of the company took off their rings, and cast them into the foundations.<sup>a</sup> This work being finished in 1144, it was dedicated with great solemnity on the 11th of June, in the presence of the king, the queen, the queen-mother, and a vast assemblage of prelates, who consecrated the high altar and twenty others; among which it is mentioned, that the altar of the Virgin was consecrated by Theobald Archbishop of Canterbury.

The author of one of the records before alluded to,<sup>b</sup> asserts that Suger, after he had completed the upper part of the church, in which<sup>c</sup> Felibien thinks that the transept is included, still proceeded in his work; and that, instead of finishing the towers, as he had at first intended, he began to renovate the middle part of the church, so as to make it conform and harmonize with each of the other parts (the chevet

<sup>a</sup> Hist. St. Den. iv. 8.

<sup>b</sup> Liv. de l'Adm. Abbatiale. Cap. xxix. de continuatione utriusque operis.

<sup>c</sup> Hist. St. Den. iv. 8.

and the west front) which he had before renewed. It is probable, therefore, that he, in some measure, renovated the whole church, though he appears to have retained some parts of the ancient structure, particularly the walls, for which he had the highest veneration, believing them to have received the benediction of Christ himself in the time of Dagobert. The death of Suger happened in 1151, after he had governed the abbey twenty-nine years.

This supposition, that the fabric was not entirely rebuilt, agrees with the accounts given in many ancient records;<sup>a</sup> and a passage<sup>b</sup> in the life of that abbot by the monk Wilham, seems clearly to express, that the church was not a new structure erected from the ground by Suger; but that it was greatly altered by him, and in many parts rebuilt. But a more decisive evidence is derived from the state of decay in which Eudes Clement found the church in 1231,<sup>c</sup> and which induced

<sup>a</sup> Hist. St. Den. iv. 8.

<sup>b</sup> Varias de cunctis regni partibus asciverat artifices; lathomos, lignarios, Pictores, Fabros, Ferrarios vel Fusores, Aurifices quoque et Gemmarios, ut Ligno, Lapide, Auro, Gemmis et omni pretiosâ materiâ Martyrum memoriam exornarent, et ex veteri novam, ex angustâ latissimam, ex tenebrosâ splendidam redderent ecclesiam. Vit. Sugerii. Abbatis, Lib. ii. 9.

<sup>c</sup> Hist. St. Den. v. 2.

him, in spite of the superstition that the walls were still regarded with, to undertake the rebuilding of the greater part of it from the ground. St. Louis, and his mother Blanche, assisted him in this design, and we find, in consequence, the arms of Castile and France united in many parts of the choir and transept. <sup>a</sup>The choir, it appears, was nearly completed under this abbot, and the rest of the new work, which consisted of the transept and nave, was carried on by his successors, and finished under Matthieu de <sup>b</sup>Vendosme, in 1281, who also repaired the other buildings of the abbey, and surrounded it with a wall and towers.

The church of St. Denis is externally a lofty and striking fabric, when seen from the east, the north, or south sides: the height of the windows, the delicacy of the sculpture, and what

<sup>a</sup> The following notice occurs in the *Petite Chronique de St. Denys*, mcccxxxi. Hoc anno cœpit Odo Abbas renovare capitulum ecclesiæ B. Dionysii Areopagitæ, et perfecit illud usque ad finem chori, hoc excepto quod turris ubi sunt cymbala à parte revestiarii non erat perfecta, nec voltatus erat chorus; sed a parte sancti Hippoliti totum erat perfectum, et etiam voltatum a parte vestiarii.

<sup>b</sup> Hist. St. Den. V. X. This event is also recorded in the *Petite Chronique de St. Denys*, mcccxxxi. consummatum est novum opus ecclesiæ B. Dionysii a domino Matthæo Abbate.

has been quaintly termed the “flutter of arch buttresses, and abundance of busy work,” produce an effect of confused richness and varied light and shade, which forms one of the greatest triumphs of this style of architecture. The west front, however, is deficient in majesty and decoration. The chief portal is arched semicircularly, and adorned with sculpture, but the walls above it are thinly ornamented with ranges of alternate round and pointed arches, in half relief, on little pillars similar to those of Purbeck stone, so frequent in our churches. The height of the towers is unequal, which materially affects the beauty of the fabric; they are crowned with slate spires, and perforated with round-headed windows.

The interior presents a more regular and magnificent prospect; a prospect which cannot fail to remind the English traveller of our grand national receptacle of monuments, though it certainly surpasses it both in the richness and lightness of its architecture.

The abbey of St. Denis as it now stands, contains examples of three æras of French Gothic Architecture. The first is the most curious, and is perhaps the oldest perfect specimen of

<sup>a</sup> Expressions of Sir Christopher Wren, in his *Parentalia*, to denote the peculiarities of the Gothic manner.

ornamented building remaining in France. The lower church beneath the chapel of St. Denis is with good reason decided to have been part of the ancient fabric erected by Pepin and Charlemagne in the eighth century. The rudeness of its architecture, and the effigies of these monarchs sculptured on the capital <sup>a</sup> of one of the columns seem to leave no doubt on this subject. This curious remain, among other illustrations of the history of the art which have been before noticed, affords a more ancient example of that arrangement of columns in the circular arcade which necessarily produces the pointed arch, and which has been already described in the later instance of St. Germain des Prez. The pointed arch, as a characteristic style, arose long afterwards, and probably from a different cause; but it is certain that the <sup>b</sup> earliest arches of that shape which occur in the architecture of the middle ages, are to be found, as in this and similar instances,

<sup>a</sup> See *Le Musée des Monumens François*, par Percier et Lenoir. Tom. I. Plate 39.

<sup>b</sup> The pointed arches in the Chevet of St Germain des Prez, erected at the beginning of the eleventh century, have been already noticed: another example of the same arrangement is seen in the Benedictine church of La Charité sur Loire, built towards the close of the same century; a curious and interesting monument of Lombard architecture.

produced by the semicircular arcades at the eastern ends of the ancient Lombard churches.

The great gate<sup>a</sup> claims to be of the time of Charlemagne, and perhaps the mere masonry may be of that antiquity; but there can be no doubt that the decorations and statuary were added afterwards, in the 12th or 13th century.

The chapels of the Chevet, and some part of the eastern arcade of the church, are remains of the work of Suger, to whom must also be attributed the western front.<sup>b</sup> The pavement, and the painted glass of the east end, are of the same date. The columns erected by Suger are of the Lombard style; but the pointed arch occurs in every part of his work.

When it is remembered that the works of Suger were all executed before the middle of the 12th century, and that the Chevet of St. Denis was indisputably finished in the year 1144, our belief that the English artists were prior to those of other nations in the use of the pointed arch, must be considerably

<sup>a</sup> Hist. St. Den. Chap. ii.

<sup>b</sup> Lenoir has given two specimens of these, in his *Musée des Mon. Français*, Pl. 36, 37. Pl. 36, however, which is a mixture of the lightest Gothic, with a Moorish pattern, may, with greater probability, be referred to the subsequent alteration of the church in the 13th century.

shaken. No certain instance can be brought forward among the anterior or contemporary buildings of this country, in which the pointed arch was decidedly introduced.<sup>a</sup> All authorities concur in fixing the reign of Henry II. (that is, after the year 1154), as the earliest æra of the introduction into England of the mixed style of round and pointed arches, which we see practised in Suger's works in France before that period. The first work in which the pointed arch decidedly occurs in this country (for the dubious instance<sup>b</sup> of St. Cross, built in 1132-36, cannot be admitted by any one who wishes to proceed on sure grounds), are the vaults of Archbishop Roger, at York,<sup>c</sup> begun in 1171; the vestibule of the Temple Church, built in 1184;<sup>d</sup> the great western tower<sup>e</sup> of Ely, finished in 1189; the choir<sup>f</sup> at Canterbury, carried on between 1175 and 1180; and the two

<sup>a</sup> Bentham, Grose, Warton, &c. and Mr. Milner, who, notwithstanding his eagerness to assert the priority of the English in the discovery of the pointed arch, has not been able to produce an earlier instance of its decided appearance in this country, than the remains of Hyde Abbey, which he supposes to have been built about 1160. *Hist. Winch.* vol. ii. 152.

<sup>b</sup> Appendix, NN.

western towers of Durham which are almost exactly in the same style as Suger's front of St. Denis, erected in 1233.

The nave which contains the choir, and the transepts of St. Denis, were built by Eudes Clemont and Matthieu de Vendosme, between the years 1231 and 1281. The works of these abbots form a magnificent structure; not, perhaps, equal to that of Amiens, in lightness and delicacy; but still so light and beautiful, and so grand an example of the magic hardiness of Gothic architecture, that it is not the less admired because the eye has been previously delighted with that exquisite cathedral. The bold and striking elevation which distinguishes the works of the French architects, and to which their lightness is in a great measure to be attributed, is very remarkable in this church, where the nave is 90 feet high and only 39 wide.

The works of Eudes and Matthieu de Vendosme, at St. Denis, afford a further illustration of the superior advances of the French in Gothic architecture. The instance of Amiens, however, is so decisive on this point, that it would be superfluous in this place to insist upon every additional argument, which is to be derived from a survey of this fabric, and a comparison of it with the contemporary parts of Westminster Ab-

bey.<sup>a</sup> The superior finishing of the buttresses, the pillars, and the tracery, is every where apparent. The windows, however, are so striking a corroboration of what will hereafter be noticed respecting those of Amiens, that they must not remain without some mention. The upper range at St. Denis, which fill up the space between the great arches and the vaulting, and which resemble each other in pattern throughout the whole work of Eudes and Matthieu de Vendosme, are eminently spacious and magnificent; and it may be safely asserted, that none at all similar, or comparable to them, can be adduced from the contemporary buildings of this country. They are each nearly forty feet high, and each is divided by four perpendicular mullions, terminating in arches, which support three six foils or roses. The distance between each is only three feet. Some of these were certainly finished under Eudes Clemont, and were, no doubt, conceived by the architect, whose plan he adopted, and began to carry on in 1231. If these be com-

<sup>a</sup> The eastern part of the old abbey church of Edward the Confessor was taken down, and the new one begun under Henry III. in the year 1245. The choir was finished in 1285. In 1299 the palace and monastery were destroyed, and the church defaced, by fire. The latter was repaired and completed by Edward I. and his successors. Stowe's Survey, p. 845, et seq.

pared with the more simple combinations of <sup>a</sup> Westminster Abbey, and other contemporary buildings of England, the superior advances of the French architects will be immediately manifest. No instance of broad and magnificent windows occurs in England before the end of Henry the Third's reign, or the beginning of that of Edward the First; but as this subject is treated at large in the account of the cathedral of Amiens, it will not be necessary to enter further into it on this occasion.<sup>b</sup> It must, however, be remembered, that the abbey of St. Denis clearly establishes this fact, that the French had decidedly introduced the pointed arch before the middle of the 12th, and had constructed broad and magnificent windows before the middle of the 13th century.

This noble structure was, in 1802, given up to decay. In many parts the vaulting had fallen in, the pavement was totally destroyed, and that part of the painted glass which escaped

<sup>a</sup> See Appendix OO.

<sup>b</sup> It would be impossible, perhaps, to select two more striking instances of the superiority of the French in the 13th century in the arts of sculpture and decoration, than the tomb of Dagobert, the principal founder of the church; and the door of the southern transept (Mon. Fran. pl. 29. 62); they are both exquisite specimens of taste and richness.

the ravages of the revolution, had been transported to the Museum of French Monuments, at Paris.

The crosses which were erected on the road between Paris and St. Denis, to mark the places where Philip III. the son of St. Louis, occasionally rested, when he was carrying the remains of his father to be buried at the abbey, have all been swept away during the revolution. <sup>a</sup>They are said to have much resembled those which were erected <sup>b</sup> a few years later at Waltham and Northampton; their height was forty French feet, and they contained statues, as large as life, of Louis IX. the Count of Nevers, Philip III. and the Count of Clermont, the three last of whom took the principal part in this pious ceremony.

<sup>a</sup> Dr. Smith in his Tour on the Continent, 1786-87.

<sup>b</sup> These crosses were erected by Philip III. in 1285. The crosses of Edward the First, in England, were put up after the death of his Queen Eleanor, which happened in 1296.

## CHAP. II.

## THE CATHEDRAL OF NOTRE DAME, AT PARIS,

Founded by Childebert, in 522—The present building begun by Robert the Pious, A. D. 1010.—Continued under Maurice de Sully and the succeeding abbots, and completed in the course of the 14th century.—Examination of the different parts of the building.

THE celebrated cathedral of Notre Dame, which, though the work of several centuries, was principally erected at the close of the twelfth, and during the thirteenth, next demands our attention, as being the next in chronological order. Before, however, I proceed to the history and description of it, I will briefly mention, that it has been a controversy among the Parisian antiquaries, which was the first church founded in their metropolis; and that the most reasonable account seems to be, that St. Stephen's was the mother church, probably established by St. Denis, the apostle of Paris, who is said to have taken the proto martyr for his patron.

After the death of St. Denis, an oratory was erected in honour of him, which still retains his name, and which was most likely the second edifice of this kind erected in Paris. It

was not till the sixth century that the foundation of Notre Dame took its origin. It was begun by Childebert, A.D. 522, who caused it to be dedicated to the blessed Virgin; and so powerful was the influence of her name, that it soon prevailed over all the others; and her church, though only third in point of antiquity, became the cathedral of the diocese of Paris.

Fortunatus, a contemporary poet, gives a description of this ancient church. In this account, the size of the windows, and the number of the marble columns, which he fixes at thirty, ‘*ter decem ornata columnis*,’ are the chief objects of his admiration. From this it should appear to have been a considerable structure; the size might exceed, but the general character of the building was no doubt the same as that of Childebert’s church of St. Germain, and which is sufficiently confirmed by the happy preservation of the original shape of St. Genevieve. After that extensive destruction which the Normans brought upon France in the ninth and tenth centuries, it was the necessary office of the succeeding princes and prelates to restore the ruined fabrics of religion, upon the revival of which, their own dignity and the public devotion so much depended. Among these, Robert the Pious particularly

distinguished himself; and it is to his reign we may generally refer the most ancient parts of the churches within and around the metropolis. He laid the foundations of the present cathedral in the year 1010; but after his death it was neglected, so that it does not appear to have been much raised above the ground till the year 1165, when a liberal and munificent prelate filled the see of Paris, Maurice de Sully, who may be considered as the principal author of the present edifice. He destroyed the old church of Childebert, which probably stood on the same ground as the present choir, and around which King Robert's more extensive foundations had been laid.\* The first stone was placed by Pope Alexander III. who at that time had taken refuge in Paris; and in the year 1181, the eastern part had so far advanced that it was consecrated by Henry, the Pope's legate, and by the bishop himself, who died the same year, and was buried in the church of St. Victor, where his epitaph remained till the revolution.

Odo de Sully succeeded, and carried on the work with great zeal till his death, in 1208. Pierre de Nemours, who died in 1220, probably finished the nave and the west front,

\* The church of St. Remigius, at Rheims, seems to have been built in this same manner in 1049. Hist. Nat. Rem. 89.

and his successors of the thirteenth century completed the necessary addition of the transepts; that to the south was begun in 1257,\* and is said to be built in part upon the site of the ancient church of St. Stephen, which was destroyed on the occasion: this is thought the more probable, as the life and martyrdom of that saint are represented on its principal entrance. These are the leading æras of this great work; but it also appears, that the building of chapels continued during the greater part of the fourteenth century, as we discover from acts, charters of foundations, &c. as well as from their sculpture and ornaments. Thus if we date the commencement of the present structure from the time of Bishop Maurice, in 1168, we shall find that its completion was achieved by the labour and perseverance of two centuries. After all, it affords more

\* This is discovered by the following inscription on the stones of the southern portal:

Anno Domini MCCLVII. mense Februario Idus ij  
Hoc fuit incæptum Christi genetricis honore  
Kallensi Lathomo vivente Johanne Magistro.

Instances of the transepts being erected after the choir and nave are not uncommon. See the account of the rebuilding of S. Remigius's church at Rheims. Met. Hist. Tom. ii. 89. And of the church of St. Nicaise, in the same city, vide Epit. Chron. S. Nicaï. Remensis, 637.

scope for remark than for admiration ; the whole is particularly heavy ; the exterior, from too great an excess of ornament in some parts, and a want of it in others ; from the thickness and plainness of the buttresses, and principally from the want of relief and finish in the towers. The interior is heavy, from the mixture of styles ; the body of the church is divided into *five* aisles, by *four* ranges of Lombard columns, a species of grandeur which never crossed the channel. These columns are, however, of the most gross and clumsy proportions, and the gothic work in general is without ornament and beauty ; its size, therefore, is the principal source of magnificence and effect it can boast of.

Robert the Pious, when he laid the foundations in 1010, most probably prepared the Lombard columns which at present support the building ; if not, they were prepared by some of his successors, some time before the year 1165 ; when it is certain Gothic taste prevailed, from the eastern part of this church, which is recorded to have been the work of Maurice de Sully. The west front is said to have been completed during the reign of Philip Augustus ; and I find many reasons for supporting the opinion that this was the case, though it may be doubted whether it was accomplished quite so early

as the end of the twelfth century; the round arch ornamented with the Lombard zig-zag above the marigold windows, shews it to be an early Gothic building; but the chief argument is derived from the Galerie des Rois, a series of niches containing statues of the kings of France, from Childebert, the original founder of the church, to Philip Augustus. The eastern end, which is triagonal and very plain, was probably one of the first Gothic structures in France; this plainness, from a proper regard to uniformity, was maintained in the subsequent parts of the building, excepting in the chapels, which are of a later date. The west front, it must be remembered, is a striking proof that the French, at the end of the twelfth century, had added a richness to their Gothic which we, if it was not imported, were at least half a century later in producing. It is impossible, by mere description, to convey an adequate idea of the three marigold windows of this cathedral, which still retain their painted glass, and which are not only its most admirable ornaments, but the most magnificent I have any where seen.

## CHAP. V.

RHEIMS. CATHEDRAL AND ABBEY CHURCH OF  
ST. NICAISE.

The Cathedral founded by Ebo, A. D. 818.—Burnt, A. D. 1210.—Rebuilt and consecrated in 1241.—Survey of the merits of the building.—Architect, Robert de Coucy.—Comparison of the progress of architecture in the two countries, founded on the forms of the windows, and style of sculpture.—St. Nicaise supposed to have been founded in the 4th century.—Rebuilt in 1056, and again in 1229.—Methods used by the monks to obtain funds to answer the expense of building.—Description of the church, its lightness and elegance characteristic of an advanced state of architecture on comparison with the cathedral of Notre Dame.

## THE CATHEDRAL OF RHEIMS.

THE cathedral of Rheims has long been celebrated as the most beautiful in France,<sup>a</sup> and this pre-eminence has not only been fully allowed, but even extended by the few of our

<sup>a</sup> Decor et majestas præclarissimæ hujus structuræ omnem scribendi peritiam longè superat, ob elegantiam omnibus est admirationi, atque sibi similem non habet in tota Galliâ.—Met. Remensis Hist. Dom. Guliel. Marlot S. Nicasii Rem. Prioris, Tom. ii. p. 470.

travellers<sup>a</sup> who are qualified to form a judgment on the subject. I am particularly happy in having been able to procure an excellent representation of the west front of this beautiful fabric, (which is given for a frontispiece to this work) and in meeting with the copious chronicle of the Prior of St. Nicaise, which will afford me sufficient materials for illustrating its dates and history. Leaving however the preaching of St. Remigius, the martyrdom of St. Nicaise, and the tales of more remote antiquity, I proceed at once to the episcopate of Ebo, who, in the year 818 laid the foundations of a new church. The <sup>b</sup>letter of Louis I. is still extant, in which he grants the bishop the walls and gates of the city for materials, and the most ample powers to remove every obstruction in the way of his new edifice: he also sent, according to the request of the prelate, his own artificer, Rumalde, to superintend and carry on the work, and the greater part of it seems to have been completed within a short time after its foundation. It was decorated with the utmost magnificence of the times, and we read that the pediment (fastigium) of

<sup>a</sup> Gray's Letters, p. 70.      Dallaway's Anec. of Arts.      Walpole's Anec. of Painting, p. 182, 194.

<sup>b</sup> Frodouard, Met. Rem. Hist. lib. iii. cap. 19.

the great entrance was ornamented with the statues of Louis I. Pope Stephen V. and Ebo himself, who was proud to transmit to posterity, by an inscription beneath, that the Pope had consecrated the king of France at Rheims during his episcopacy. <sup>a</sup>It is certain, however, that the cathedral was not entirely finished by Ebo, and that the works were a long time suspended during a dark interval of conspiracies and civil wars. <sup>b</sup>In the year 847, Nicmar, archbishop of Rheims, obtained from Charles the Bald a renewal of the grants made to his predecessor, and completed the fabric. He seems also to have added the cloister, and to have enriched the church with a variety of treasures and ornaments, and having called together his suffragan bishops, he consecrated it in the presence of the king with great solemnity, A. D. 862.

This church <sup>c</sup> whose beauty, holiness, and treasures were celebrated with all the fond admiration of those ages, was burnt May 6, A. D. 1210, together with great part of the city of Rheims. From the grant of materials we may learn

<sup>a</sup> Frodouard, lib. iii. cap. 20, et seq.

<sup>b</sup> Ibid. cap. 23.

<sup>c</sup> Met Rem. Hist. Marlot. lib. iii. cap. 21.

that it was a stone building, though the roof was probably of wood,<sup>a</sup> and the whole fabric might receive the same<sup>b</sup> sort of damage as the old choir of Canterbury, which after the fire in 1174, it was thought advisable entirely to renew, while the ancient crypt, which had not been hurt, was left unaltered. A similar proceeding took place in this instance; the crypt of Ebo was left, and the remainder of the year, and a part of the next, was employed in laying the more extensive foundations of a new fabric. ‘When we see that upon the introduction of Gothic architecture, princes and prelates were often tempted to pull down their old churches that they might erect others in the new style, we need not wonder that in the 13th century this damaged edifice should be entirely rebuilt instead of being repaired. Preachers were sent forth to demand the contributions of the faithful throughout the whole province, and it appears that the work was so far advanced, that the altar was dedicated by the archbishop on the 18th

<sup>a</sup> Auguror fornices et pilas ligneas fuisse ut et aliarum ecclesiarum, &c. &c. Marlot.

<sup>b</sup> See an account of the burning and rebuilding of the church of Canterbury by the Monk Gervase, script. col. 1302.

<sup>c</sup> Felibien, lib. iv. p. 245. Capt. Grose’s Preface to his Antiquities.

of October, 1215. <sup>a</sup> Several bulls and rescripts shew that it was carried on during the succeeding years, and most writers assert, that it was finished thirty years<sup>b</sup> after its foundation; which agrees entirely with the chronicle of a contemporary author, who relates that the canons of Rheims entered their new choir on the vigil of the nativity of the blessed virgin, in the year 1241. Marlot<sup>c</sup> has apparently good reason for supposing that this finishing merely comprehends the body of the building, and that the ornaments of the grand façade were put up between that time and the English war in 1295, during which interval a continued dispute was kept up between the collectors of St. Nicaise, which was re-building at that time (as we shall hereafter see) and those of the chapter of Rheims. From the records of the church we also learn, that the tower next the archbishop's palace, which from some cause had been left unfinished, was completed at the expense of Cardinal Philaster, A. D. 1430.

<sup>a</sup> *Chorum ejusdem consecratum fuisse ab Alberico Archiepiscopo xv Cal. Nov. Anno 1215. Met. Rem. Hist. Tom. ii. p. 470.*

<sup>b</sup> *Tradet Albericus annos viginti huic operis restaurationi impensos, alii triginta quod verius existimo. Ibid.*

<sup>c</sup> *Quod de præcipuâ ædificii mole, choro scilicet, navi, pilis, fornicibus et sacellis intelligendum puto, &c. &c. Ibid.*

The plate which accompanies this work will supply the place of description, and will, I am confident, ensure the decision that the exterior of the cathedral at Rheims is the most beautiful and perfect piece of Gothic architecture in the world; for where else shall we find such an union of airiness, delicacy, and magnificence? Viewing it laterally, the lightness and grace of its windows, the number, richness, and finish of the buttresses, the admirable taste of the open work, the nice disposeure of ornament, and the uniformity of the whole, form a mass of consistent beauty and grandeur which is as inimitable, as it is unrivalled. The stately plainness of the tower, and the decoration, without heaviness, of the upper parts, are well worthy of admiration; but it is the west front which has long been the boast of France, and which is the perfection of its style. Its general proportions are excellent, and the richness and delicacy of its ornament cannot be surpassed.

That these praises may not be thought extravagant and unfounded, I will point out distinctly its beauties, and the causes of its superiority. The diminishing or pyramidal form is in itself more graceful, and it is certainly more congenial to the character of the Gothic style, than the square fronts of our cathedrals. It has the advantage which is possessed too

by some of ours, of having no mixture or confusion of design; but here how nobly has the invention and taste of the architect displayed itself! He has surpassed every other front in richness, at the same time that he has excelled them in lightness; he has judiciously placed all his heavy magnificence below, and has gradually lightened and relieved his ornaments as they rise to the summit; the eye is delighted, without being confused; every thing partakes of the pyramidal and spiral form, and the architecture is preserved as delicate and light as possible, as a contrast and relief to the sculpture.

One of the chief and distinct excellencies of this façade, and that which renders it superior to all those of this country, is the admirable magnificence of the portal, and its just proportion to the rest of the building. The great entrance of a cathedral should always be worthy of the structure to which it leads; yet this circumstance seems never to have influenced the English architects, who have expended their chief care in the construction of a magnificent west window, beneath which invariably, a mean and disproportionate door presents itself<sup>a</sup>. We

<sup>a</sup> See the west fronts of York, Salisbury, Lincoln, Wells, and Litchfield Cathedrals; Westminster Abbey, King's College Chapel, &c. &c.

have not a single entrance worthy of our churches, and in this respect, the arrangement of the French churches, with their ample portals and marigold windows, have externally a decided advantage.<sup>a</sup>

In surveying the cathedral of Rheims, there is, I think, nothing which the most scrupulous taste would wish altered, except the finish of the towers, which perhaps might have assumed a more spiral shape. The number of its minute beauties are astonishing; the pinnacles finished with figures, flowers, and crosses, are without doubt the most beautiful of their kind. The fleurs de lis spread along the roof, which decoration is also used at Amiens, Abbeville, St. Romigius of Rheims, and I believe in all French churches, have an admirable effect; and it is no wonder that in the cathedral of the city, where the divine present of the Auriflamme<sup>b</sup> was made to Clovis, its symbol should be displayed with peculiar ostentation and magnificence<sup>c</sup>.

<sup>a</sup> The Gothic portal in England, which is most in proportion to the height of the building above it, is that of the north transept of Westminster Abbey, which is, as to its whole plan, very much in the French style.

<sup>b</sup> Bannière de Vermeil toute semée de fleurs de lys d'or que l'on conte avoir été envoyé du ciel au grand Clovis. *Antiquités et Recherches des Villes, etc.* de France, p. 212.

<sup>c</sup> Another reason of a more general nature is mentioned in a description of

The name of the original architect of this beautiful edifice, is probably entirely lost, but it is not without reason that we accord the praise of its completion and decoration to Robert de Coucy,<sup>a</sup> who was undoubtedly director of the works at Rheims during the latter part of the 13th century: the ornaments of the exterior were always the last finished, and it is a greater satisfaction to know to whom to attribute these peculiar and distinguishing beauties of this cathedral, than if we had discovered the original designer of the whole, unless we could be certain that his designs were not embellished by the genius of succeeding architects. I think there is little doubt of that having been the case in the present instance, and I am still more certain that if it was so, Robert de Coucy has the fairest possible claim to the first place among the known

the abbey church of St. Remigius. *In fastigio sunt lilia et flosculi alternatim posita quæ Regum largitionibus Basilicam ditatam prædicant.* Frodouard, *Hist. lib. iii.* 328.

<sup>a</sup> His epitaph, in the cloister of St. Denys at Rheims, contains only these few words: “Cy gîst Robert de Coucy Maistre de Notre Dame et de Saint Nicaise qui trepassa l’an 1311.” *Epit. Chron. S. Nicas. Rem. cap. iii.* L’epitaphe qu’on voit sur sa tombe fait assez connoître qu’il en eut la principale inspection, du moins pendant qu’on l’acheva. *Felibien, lib. iv.* 246.

and unknown professors of “ the mystery of the rule and square,” of those ages.

It remains for me to compare the style of architecture which is displayed in this church, with that which was contemporary in England. It signifies very little which part of the fabric was first erected, since, excepting three windows in the south transept, it proceeds upon the same plan throughout;<sup>a</sup> however, as it was rebuilt from its foundations, it is probable that the choir was first begun upon; and this supposition is strengthened by the dedication of the altar in 1215. I do not remember any English church commenced at precisely the same period, and though the cathedral of Rheims might maintain, as to every purpose of proving superior advances in architecture, a successful comparison with that of Salisbury, which was begun ten years later, yet I prefer reserving the more striking and decisive instance of Amiens, to encounter that edifice in a succeeding chapter. I shall therefore proceed to collect the general state of Gothic architecture in England, at the commencement of the thirteenth century.

<sup>a</sup> *Tota qua exterius patet ecclesiæ fabrica sive a tergo sive ad latus candem elegantiam retinet ac iisdem decoratur ornamentis. Met. Rem. Hist. lib. iii. p. 272.*

It is allowed by a writer<sup>a</sup> most strenuous in giving the English the merit of the invention, to have been *then* “in its infancy;” and it is certain that at the time of the foundation of Rheims cathedral, our most considerable regular efforts in the Gothic style, were Sir Hugh’s<sup>b</sup> work at Lincoln, and De Lucy’s addition to the cathedral at Winchester,<sup>c</sup> and that the character of these works is preserved with very little alteration during the first half of the century in question. De Lucy’s<sup>d</sup> work is mentioned by the same writer, than whom none is more deeply versed in English antiquities, as strikingly characteristic of the age in which it was executed. The windows

<sup>b</sup> Hist. and Antiquities of Winchester, by Milner.

<sup>c</sup> This prelate filled the see from 1186 till 1200, and under his auspices the upper transept and chapter house were probably erected during the last ten years of the twelfth century; and if Sir Hugh the Burgundian has not been mistaken for Hugh de Wells, (1209) they are the first regular essays of Gothic architecture in this country. Vide Essex’s paper in *Archaeologia*, Vol. IV.

<sup>e</sup> Anno 1202 Wintoniensis Godfredus de Lucy constituit confratriam pro reparatione ecclesiæ Wintoniensis duraturam quinque annos completos. *Annales Winton.*

<sup>d</sup> Mr. Milner’s observations respecting the west window and door of St. Cross, is made upon no authority, and is so contradicted by the rest of the essays on Gothic architecture, and by the observation of every one skilled in these matters, that I need lay no stress upon it.

of Rheims are *not* narrow and oblong, with obtuse-angled, or lancet-like heads, and without mullions; particulars on which Mr. Milner insists as a principal proof of De Lucy's work having been built at the beginning of the 13th century; nor do his other characteristics accord with the more decorated features of the church I am describing: instead of being narrow and lancet shaped, the windows are broad and spacious; and instead of being without mullions, an upright shaft supporting two arches surmounted by a six-foil is the universal embellishment throughout the cathedral; an ornamental combination the first and feeblest hint of which is sought out from the porch of Beaulieu Refectory, erected about this time, but which was not decidedly adopted in England till near the middle of the 13th century;<sup>a</sup> even then, we shall in vain search for similar instances of lightness and delicacy of execution. In speaking of the first half of the 13th century, I will confine my comparisons to the body of the church and its windows; the other ornamental parts were no doubt executed as in the later period; but where in Westminster Abbey, or any other contem-

<sup>a</sup> Netley Abbey was probably begun 1239. Westminster Abbey in 1245. Stowe.

porary, or I might even add, later period in England shall we find such a combination of grace, elegance, and effect? In addition to the beauties I have already pointed out, the sculpture is also in a superior taste to any thing we can produce of the same date; and it may be with truth asserted, that the richness and magnificence of the arched buttresses are such, that they seem to have been added for the purpose of decoration rather than of strength.<sup>a</sup>

I have said less of this church than I should have done, had I not proposed, in speaking of Amiens, to make a more full and exact comparison with our edifices of the same date; but it must be remembered, that the conclusions drawn from this instance are perfectly consistent with those to be deduced from that structure, and equally decisive upon the general question which I have in this work undertaken to agitate and to explain.

<sup>a</sup> Parastatæ quibus a dextrâ fulciuntur fornices tot liliis et floribus scatent ut ad ornatum potius quam ad futuræ opus dixeris positas. Met. Rem. Hist. lib. iii. p. 472.

## THE ABBEY OF ST. NICAISE AT RHEIMS.

THE progress of Gothic architecture in France is considerably further illustrated by the abbey church of St. Nicaise, in the same city, the dates of the greater part of which appear to be well ascertained, as are the architects' names who were employed upon it. The <sup>a</sup> original foundation is said to be of the fourth century, and to have borne, for a long period, the title of Basilica Jovinia, it having been erected by Jovinius, a Roman military prefect, in honour of his relation Agricola, who suffered martyrdom at Boulogne on the persecution of Dioclesian; but, like many other churches, it afterwards changed its patron, and put itself under the protection of St. Nicaise, an archbishop of Rheims, who suffered decapitation within its sanctuary in the fifth century.<sup>b</sup> This old church having fallen into decay through the neglect of his successors, a new one was built from its foundations by Gervase, who was elected archbishop in 1056.<sup>c</sup> The present structure, how-

<sup>a</sup> Epitome Chronicon S. Nicasii Remensis, cap. i.

<sup>b</sup> Ib. cap. iii.

<sup>c</sup> Ib. cap. ii.

ever, took its rise 160 years after the death of Gervase, when the fame of the patron saint was so high, that the church was deemed too small for the reception of the crowds who visited his shrine.<sup>a</sup> Accordingly the abbot Simon having deliberated upon the undertaking in a full chapter of the convent, determined upon erecting a new and more extensive fabric. The ground was properly excavated to receive the foundations, and the first stone was laid by Henry de Braine, Archbishop of Rheims, on the second feast after Easter, A. D. 1229.

Two archbishops, whose names are still preserved, were successively employed on this structure, and their talents and genius are eminent, though distinct in every part of it. The fabric was begun for the convenience I suppose of using as long as possible the old choir at the west end, which was completed, together with its portal and towers, and a considerable part of the nave, by Hugh Libergier, who died in 1263.<sup>b</sup> Robert de Coucy, whose

<sup>a</sup> Epitome Chronicon S. Nicasii Rem. cap. viii.

<sup>b</sup> Hugo Libergier pronaon ecclesiæ perfecit, utrasque alas, frontem, propylæum et turres. Chron. S. Nicas. Rem. p. 636.

This architect lies under a white tomb, near the entrance of the church; he is represented bearing a model of the church in his left hand, and a rule and compass in his right. His epitaph is round the edge of the monument. 'Cy gist Maistre Hugue Libergier qui a commencê cette Eglise l'an de l'Incarna-

genius is so conspicuous in the decoration of the cathedral, was engaged to finish the rest of the structure; he built the choir, with its surrounding chapels and the transept.\* We discover, from a grant to the monks of St. Nicaise of the stone quarries near Harmondville, belonging to the Abbey of St. Theodoric, that the work was carrying on in 1297, and it is probable that it was directed by Robert de Coucy till his death, in 1311. He must, however, have left the transepts in a very unfinished state, for they remain incomplete at the present moment.<sup>b</sup> There is a part of the cloister in a similar condition; this, together with the chapter-house and dormitory, were probably the subsequent work which we discover to have been going on in 1322<sup>c</sup> and in 1328, after which period we hear no

tion 1229, Mercredy d'apres Paques et mourut l'an 1263, le vendredy d'apres Paques, pour Dieu priez pour lui.'

\* Robertus cognomento de Coucy caput Ecclesiæ construxit cum sacellis quibus mirificè circumcingitur, latera quoque seu brachia quæ cum superiore fornice crucis figuram efficiunt. Chron. S. Nicas. Rem.

<sup>b</sup> Ad hucque restant brachia ut vocant seu latera imperfecta. Ib. p. 638. Claustrum pariter, &c.

<sup>c</sup> In the will of Archbishop Robert, 1322, A. D. we read, 'Nicasianis verò tres sui Currus, seu rhedæ meliores equos concessit provehendis lapidibus ad magnifice inchoatam eorum Basilicam proficiendam. Met. Rem. Hist. tom. ii. 609.

more of it; and when we consider the distracted state of the north of France during the greater part of the fourteenth century we shall not wonder at this silence.

It seems from the length of time which elapsed from the laying the first stone, to the death of the last architect, that the work was frequently interrupted, and this was probably occasioned by a want of money; a circumstance the more likely, when we consider that the funds depended upon voluntary contributions, and that the metropolitan church of the province was erecting at the same time, and supported by the same means: we may easily imagine that the chapter of the cathedral was possessed of more interest and influence than the monks of St. Nicaise; and the event answers to such a supposition, for they raised a more splendid fabric in a shorter period.

I have before alluded to the disputes between the agents of the two bodies, and it may be curious to describe the mode of collecting contributions upon such occasions. Having ob-

This should seem to allude to the transept '*probatque rescriptum Guidonis Episcopi Cameracensis questam ceu collectam adhuc fieri permittentis Anno 1328, needum tum cessatum fuisse.*' Chron. S. Nicas. Rem. p. 638.

tained a bull from the Pope, two preachers were dispatched from the convent through the towns and villages of the province, who carried on a sort of bier the relics of their tutelar saint: wherever they stopped they shewed their credentials, and, with the consent of the ordinary, assembled the people, and if the church laboured under an interdict, they bade it cease during their stay. The topics of their exhortation were obvious; the life and miracles of their saint, the decay of his church, and, more than all, the promise of indulgences. Need we then wonder if the sight of the relics, the earnestness of the monks, and the assurances of pardon, in those days of passion and credulity, could seldom fail of success, and that from such powerful incitements arose the fund for those stupendous masses of labour and expense which still excite our admiration?

The church of St. Nicaise, though inferior in size to many others, is well proportioned, and is admired for the lightness and delicacy of its execution.<sup>a</sup> It has a peculiar interest in an examination like the present, from the date of its façade

<sup>a</sup> On estime cette Eglise a cause de la delicatesses du travail & de la beaute des proportions. Felibien, p. 245.

being correctly ascertained; which is therefore a model of great consequence in tracing the progress of Gothic ornament. Comparing it with that of Notre Dame, at Paris, which was prior in date, we find in St. Nicaise a greater airiness, and more decided Gothic character. Its beauty arises from perforation and relief, more than from sculpture or ornament, and it displays many of those graceful arrangements which were immediately afterwards more perfectly achieved in the cathedrals of Rheims and Amiens: like them it assumes a diminishing or pyramidal form, and places its heaviest ornaments on the lower story of the building. Its Portal, though not lofty, is considerable, striking, and prominent; and the rose window, by which it is surmounted, enriches the rest of the façade. The perforation of the towers is peculiar, and has the most happy effect in lightening the building, the unadorned buttresses of which stood in need of such a relief, and the whole is gracefully set off by the double order of slender columns on each of the towers, and the beautiful arcade by which they are united.

Some persons may suspect, from the position of the rose window in the pointed arch, that it was inserted at a subse-

quent period; but the uniform practice of the French artists will lead us to a different conclusion. We shall find that they not only always ornamented their west fronts with large circular windows, but that they adjusted them in this manner. At Notre Dame we see one of these placed in a semicircular arch, which is certainly more calculated to embrace it;<sup>a</sup> but in the Gothic buildings which succeeded we shall always find them inserted in the last pointed arch of the vaulted roof. The front and transept of Rheims cathedral contain three instances of this arrangement; and we have authority to assert, that the same would have taken place at St. Nicaise, had the transept been completed.<sup>b</sup>

In comparing this church with those which were contemporary with it in England, I must remark, that it affords another instance of the superior progress of the French in Gothic

<sup>a</sup> The rose window of the south transept of York cathedral, the earliest of the rich kind in this country (about 1250), is placed in the same manner; as may be observed by viewing from the interior of the church.

Other instances may be found in the abbey church of St. Victor, at Paris, St. Denis, Amiens, St. Germain l'Auxerrois, &c.

<sup>b</sup> *Adhuc restant brachia ut vocant seu latera imperfecta et in eo latere quod est versus meridiem fornix desideratur, in altero vero ad septentrionem fornix cum rosa vitrea.* Chron. S. Nicas. p. 638.

architecture; for we find in the plan of Hugh Libergier, invented in 1229, windows and perforations having the same width and mullions as those afterwards used in England, for the first time at Westminster Abbey; we also find a profusion of arch buttresses, and a delicacy of finish unknown to us at that period; western towers, of which we have no contemporary instance; and a marigold window which, for magnificence, we could not equal for near half a century afterwards. The trefoils, arches in half relief, and the opus <sup>a</sup>reticulatum, were common to the churches of both countries at this period.

<sup>a</sup> An expression of Vitruvius, to signify a work of diagonally crossing mouldings on joints like the meshes of a net. Vitruvius, lib. ii. cap. 8. This sort of work may be found in many Norman and early Gothic buildings in England; as Lincoln, Westminster, &c.

## CHAP. VI.

## AMIENS.

Amiens Cathedral—its dates—comparison with the contemporary Cathedral of Salisbury—description of the present state of the building—comparative measurements.

THE <sup>a</sup> cathedral of Amiens is a remarkable specimen of the beauty and lightness of Gothic architecture. It has always been mentioned by travellers in the highest terms of admiration, but it principally claims our attention, as it seems to throw very strong light upon the history of that style, which has so long been, and probably will continue to be, distinguished by the contemptuous epithet it at present bears. It must be observed, in the first place, that the cathedral of Amiens materially differs in its architecture and interior ar-

<sup>a</sup> *Templa visuntur egregiè structa, interq. ea episcopale Beatæ Virgini dicatum quod apud nonnullos primam laudem per omnem Galliam obtinet. Topograph. Gall. Pars. ii. p. 14. Aussi estimée par la beauté et l'excellence du travail, que par la grande étendue. Cazon pent dire qu'il y a peu d'ouvrages Gothiques aussi parfaits. Felibien, 227.*

rangements from the contemporary sacred edifices of this country ; which proves that a dissimilarity existed between the architecture of England and France in the very first age of the Gothic style ; and, secondly, it must be allowed, that this dissimilarity constitutes a more advanced state, and a greater perfection in the French Gothic.

The date of Amiens' cathedral being correctly ascertained, and nearly coinciding with that of our celebrated church of Salisbury, a fair comparison may be instituted between the contemporary styles from these two specimens.

Both these buildings were begun in the same year, from whence we may reasonably infer, that both their plans were projected at the same time ; and it is still more certain from history, as well as from the general appearance of the two edifices, that the original plan was in both instances adhered to throughout ; no mixture or progression of style is to be observed in either.

The two former cathedrals of Amiens had been destroyed by fire ; the first in A. D. 1019, the second in A. D. 1218. The present edifice was begun in the year 1220, under the auspices of Bishop Evrard, who collected great sums from the

clergy and people for this purpose.<sup>a</sup> His successors, Geofroi d'Eu, Arnoul, Gerard de Conchi, and Alcaume de Neulli, continued it, and it is said to have been finished under Bertrand d'Abbeville, in 1269; however it is certain that it was not entirely so till 1288: probably the multitude of statues on the west front, the pinnacles, the pavement, the fitting up of the side chapels, and many other works of this kind, might be carried on after the building was said to be finished: that this was the case with the towers we learn from distinct notices, which shew that they were erected in the fourteenth century.<sup>b</sup> Besides the two grand dates of the commencement and entire completion of the cathedral, we are also acquainted with the names of its three architects, the last of whom caused the following inscription to be placed in the middle of the pavement of the nave, where they are all three represented with Bishop Evrard.

From this chronicle of names and dates we obtain sufficient information for our present purpose. The exact æra of Salisbury cathedral is equally well ascertained, from the contemporary history<sup>a</sup> of it by William de Wanda, its precentor. Its foundation was laid on the 4th of the calends of May, in the year 1220; the east part was probably finished together with

<sup>a</sup> A translation from the original MS. of William of Wanda, is given in Price's Observations on the Cathedral Church of Salisbury. It is very curious and particular as to the translation and foundation of the church, but does not extend beyond the year 1226.

the first transepts in five years afterwards, when we read of three altars being dedicated by Bishop Poore: it was carried on during his pontificate, and those of Robert Bingham and William of York, and the whole was completed in 1258, under Bishop Brideport;<sup>a</sup> when it was dedicated with great solemnity by Boniface, Archbishop of Canterbury, in the presence of the king, and a vast assemblage of prelates and nobles. It appears, however, that the external decorations were not finished till two years afterwards;<sup>b</sup> and that the cloisters, chapter-house, muniment-house, and other buildings, were going on during the succeeding ten years. The dates, therefore, of the cathedrals of Amiens and Salisbury nearly, if not exactly, coincide; and even if they were less near, we have a sufficient specimen of the progressive alterations of the

<sup>a</sup> *Ægidius de Bridport consecratus anno 1256. Ecclesiæ structurâ jam tandem absolutâ, per Bonifacium Archiëpiscopum Cantuariensem ea dedicata est tricesimo Septembris 1258, &c. Godwin de Præsulibus Angliæ commentarius, 145. Mat. Westmon.*

<sup>b</sup> On the tomb of Bishop Poore we find, ‘*Fuitque ecclesia hæc ædificando per spatium 40 annorum, et consummata est 8 Kal. Apr. A. D. 1260.*’ *Leland Itinera. f. 62.* But we also see in *Leland* (vide the end of this chapter) the names of the two persons who directed the works here for fifty years. The cloisters, chapter-house, &c. cannot be comprehended in the term *Ecclesia*, though they may in *Nova Fabrica*, and it is pretty certain that they were added to the church afterwards. See *Price’s Professional Reasons.*

Gothic architecture of our own country during the last half of the thirteenth century, in the works which were carrying on during that period in Westminster Abbey.\*

It now remains to shew, that Amiens cathedral is in many respects different in style and plan from the contemporary buildings in England, and that it is in a more perfect and advanced state of Gothic architecture ; but it may be proper, first to mention the points in which the styles of Amiens and the English churches of the same date agree, that it may not be conceived that the architecture of the French cathedral is so entirely dissimilar from our own, as to render a comparison between them inconclusive. My object is to shew, not that the French built churches in the thirteenth, like ours of the succeeding century, but that they had before us added to the simple beauties of the former period many of the graces which were not adopted with us till the latter.

The chief characteristics of the thirteenth century with us, were the highly pointed arch, struck from two centres, and including an equilateral triangle from the imposts to the crown of the arch, the lancet-shaped window, and, to use the words

\* See Appendix PP.

of one of the most useful writers on the subject, ‘ Purbeck marble pillars, very slender and round, encompassed by marble shafts a little detached,’<sup>a</sup> and a profusion of little columns of the same stone in the ornamental parts of the building.

All these particularities are to be observed in Amiens cathedral: the arches of the aisles are like those of Salisbury and Westminster; the pillars are according to Mr. Bentham’s description; the west front is covered with innumerable small columns; and the lancet-shaped arch, though not adopted in the windows, is to be seen with admirable effect crowning the semicircular colonnade at the east end of the choir. The vaulting too is like that of Salisbury, ‘ high pitched between arches and cross-springers only, without any further decorations.’<sup>b</sup>

The dissimilarities come next to be considered, and these are so numerous in plan, proportion, and ornament, that they may be said to constitute the general character of the building. 1. The disposition of the church, with the aisles to its transepts, its double aisles on each side the choir, together

<sup>a</sup> Bentham’s Hist. of Ely, p. 39.

<sup>b</sup> Bentham speaking of Salisbury, p. 39. Sir Christopher Wren’s Survey, in Price.

with its beautiful semicircular colonnade at the end of it, will be allowed to be material dissimilarities; and, from the number of columns it presents in every point of view, an infinitely richer effect is produced than within any of our churches of the same date. 2. The proportions of the whole cathedral, particularly its surprising loftiness,<sup>a</sup> the height of the pillars to the arches, and many other details, will be also found exceedingly dissimilar, if we compare them with the English edifices of the same period. 3. In the ornamental part, however, the chief difference exists; the west front, which has a portal of just and magnificent proportion,<sup>b</sup> exhibits the most gorgeous display of statuary: armies of saints, prophets, martyrs, and angels, line the door-ways, crowd the walls, and swarm round all the pinnacles; nothing can be more rich, and nothing both in design and effect can be more different from Salisbury. If it be found that the latter has the advantage in point of lightness, it should still be remembered, that not lightness, but

<sup>a</sup> Ob altitudinem omnia alia excellentem. Topogr. Gall. p. 14. On remarque la trop grande hauteur de la nef à proportion de sa largeur. Felibien, p. 227. For the comparative measurements, see Appendix.

<sup>b</sup> The three west entrances are in the style of those at Rheims. That in the centre has depth sufficient to contain eight rows of statues.

richness, was invariably the principal object in this part of the building.

The next dissimilarity I shall point out regards the bowes, or arch buttresses, which it was our custom, in the early part of the thirteenth century, to conceal in the roofs of the side aisles, as may be seen at Salisbury, Lincoln, the south transept of York, at the east end of Canterbury in the twelfth century, and in other instances. The profusion of these at Amiens is very striking, and the manner in which they are managed and relieved by ornamental perforations deserves great admiration; but the chief difference between Amiens cathedral and its contemporary buildings in England consists in the size, dimensions, and magnificence of its windows.

It is well known that ‘the long, narrow, sharp-pointed window, generally decorated on the inside and outside with small marble shafts,’ is employed all over Salisbury cathedral;<sup>a</sup> these are often combined together, surmounted by a rose,<sup>b</sup> and persons fond of tracing the progression of Gothic architecture, are

<sup>a</sup> Bentham’s *Hist. of Ely*, p. 39. Sir Christopher Wren’s *Survey of Salisbury*, 1668.

<sup>b</sup> Bentham’s *Hist. of Ely*, p. 39. Mr. Milner, in *Essays on Gothic Architecture*, 131, &c.

eager to point out, in these combinations, the outline of the more spacious and magnificent windows, which were not adopted in the English churches till half a century afterwards. But we find at Amiens, in the plan of Robert de Lusarches, in the year 1220, windows of a width and stateliness, which were never surpassed at any subsequent period in this country.

<sup>a</sup>Amiens cathedral consists of two tiers of these magnificent windows; those of the nave are divided by three perpendicular mullions, surmounted by the same number of roses. Those to the east of the transepts have five mullions and three roses, and are crowned by a pediment ornamented with a trefoil; three most noble circular or marigold windows, full of stained glass, enrich the transepts and west front of the edifice: so completely light is this cathedral, and so artfully and delicately is it constructed, that except in its west front, hardly any wall is visible throughout the whole building: it is all window. Between those of the lower story, room is only left to insert a narrow buttress, which rises up into a pinnacle, and branches out into bowes above; these meet the building just under the vaulting of the roof, and are received on the small slip of

<sup>a</sup> See Appendix QQ.

stone-work which divides the upper windows. Internally, there is no range of open arcades between the arches of the nave and the upper tiers of windows, which is found in all our cathedrals.

That Amiens cathedral differs materially from ours of the same date, is manifest from the above statement. That it is a more light and more beautiful specimen of Gothic<sup>a</sup> architecture than either Salisbury or Westminster, will be allowed by all who have seen it.<sup>b</sup> That it exhibits a more advanced state of the art will also, I think, be admitted by all who have made the progression of Gothic ornament their study, and who will take the trouble to consider and pursue the comparison here instituted.

As when Robert de Lusarches had formed the plan, and began to erect this elegant and uniform structure in 1220, no instance had occurred in England except of the narrow lancet-windows; and as a considerable time, probably half a century, elapsed before the various combinations of these gave place to such regular and magnificent windows as we here see

<sup>a</sup> *Aditus, Columnæ, Chori, Fenestræ, Altaria et Sacella in stuporem rapiunt Spectatores. Topog. Gall. p. 14.* See Appendix RR.

were projected and begun upon at Amiens in 1220 ; (for as I before said, the cathedral is all window, and the richest of these are to be found eastward of the choir, the part which was first erected) I think we must be brought to this inevitable conclusion, that the French had advanced from the original simplicity of this Gothic style to the succeeding richness, at a time when the former alone was known in this country.

I have been induced to enter more largely into this subject, as I perceive a disposition among antiquaries to consider the question concerning the origin of the Gothic style as already nearly settled, which I am fully convinced is by no means the case.

By some it has been asserted, that we have a right to adopt the term of *English*, when speaking of this mode of architecture, to the great surprise of all persons conversant with the origin and progress of Gothic architecture, and with the different specimens of it in various parts of the continent; and it is more particularly to be regretted, that this unauthorised assertion should have been introduced into one of the most splendid, and in many respects judicious, publications, that was ever given to the English public; which, whilst it admires the magnificence of the work, cannot but regret that it

is accompanied with this very extraordinary and unfounded claim.

---

Having surveyed the cathedral as an antiquary, I shall conclude with some observations of a more general nature. On entering the west door, which is ornamented with eight rows of saints, we are immediately struck by the loftiness and lightness of the fabric, the profusion of pillars, the exact arrangement of chapels on each side, filled with marble decorations, but above all by the inimitable semicircular colonnade, with lancet arches, at the end of the choir. The situation of the organ, at the western extremity of the nave, suffers the eye to embrace the whole structure at once; an arrangement much superior to that adopted in our cathedrals. The choir is superb; it is paved with fine marble, and angels leaning forward from every pillar, support the lights; at the termination, a mass of clouds, with gold rays bursting forth, has an excellent effect. In the midst of these are preserved the relics of Saint Firmin, the founder of the see. The pulpit, in the nave, is very handsome, and a monument behind the choir, in which a child is represented in tears, is well worth observation. In the north transept there is an altarpiece which represents in

basso-relievo, Christ surrounded by all the hierarchy of Heaven, under which is written in gilt letters, “*Auspicibus tantis dabitur Victoria plebi.*” In another recess, which has the appearance of a chapel with an organ in it, a bed-room is constructed for a man whose business it was to ring the bell during the night, and to keep watch over the plate, which was distributed on the different altars of the cathedral: there is no occasion at present for such an office, all the silver candlesticks and ornaments were pillaged by the revolutionists; the relics would have shared the same fate, and perhaps the church itself, had not the mayor and some of the inhabitants of the town taken up arms for their preservation. The relics were preserved at the mayor’s house till the storm was sufficiently abated, and they could be produced again with safety. Amiens cathedral has consequently suffered less than any other of the French churches, and, with the exception of the plate, and a few heads which were knocked off the external statues by the soldiers of a Belgic regiment, the whole edifice retains its original splendour. Its ancient establishment consisted of a bishop, nine dignitaries, twenty-nine canons priests, thirteen canons deacons, &c. &c. besides sixty-two chaplains, six musi-

cians, and ten singing boys; at present it has a bishop and nineteen canons.

I must not forget to mention, that the brazen effigies of Bishop Everard, the founder, and Bertrand d'Abbeville, the finisher of the cathedral, remain upon their tombs, which are placed, by way of distinction, on each side of the great western entrance, and the other benefactors of the church are placed near them. The spire of the cathedral, which is made of chesnut wood, is in a bad taste, yet it should not be taken away unless something better be erected in its place.

It is extraordinary that Gray should have compared this church to that of Canterbury; no two structures of the same sort were ever more totally, and in every respect different.

Amiens contained, before the revolution, twenty-five convents, three chapels, two collegiate, and fourteen parish churches, most of which are either in ruins, or turned into barns and houses.

*Measurements of the Cathedrals of Amiens and Salisbury.*

---

The following are all the measurements I have been able to collect with accuracy. A considerable difference will be observed in the two churches, particularly from the unrivalled elevation of that of Amiens. The proportions of the latter are set down in French feet.

	Amiens.	Salisbury.
Length from east to west .....	415	..... 452
..... from the west door to the choir.....	220	..... 246
..... of the choir.....	130	..... 140
..... of the space behind the choir to the Lady chapel }	18	65
..... of the Lady chapel .....	45	
..... of the transepts from north to south .....	182	..... 210
Breadth of the nave .....	42.9	..... 34½
..... of the transept.....	42.9	.....
..... of the sides aisles .....	18	..... 17½
..... of the windows .....	41	..... 48
..... of nave and side aisles .....	78.9	..... 102
..... of the west front.....	150	..... 115
Height of the vaulting of the nave .....	132	..... 84
..... of the choir .....	129	.....
..... of the towers of the west front.....	210	.....
..... of the chapels.....	60	.....
..... of side aisles of the nave .....	60.8	} ..... 38
..... of the choir .....	57.8	
Distance between each pillar.....	16	.....
Height to the soffit of the grand arches.....	78	..... 78
Number of pillars, besides those next the walls .....	46	.....
..... of chapels uniformly and regularly built .....	25	.....

The number at Salisbury is nearly the same, but it must be remembered that it is a much larger church, has double transepts, and a Lady chapel divided into aisles.

## CHAP. VII.

## LA SAINTE CHAPELLE.

This, and the Chapel of the Virgin at St. Germain des Prez, the works of Pierre de Montereau—Its first foundation by Robert the Pious, in 1003—repaired by Louis le Jeune, in 1154—the present fabric constructed by St. Louis, in 1245—the distinguished beauties of the edifice.

Examination of the Musée des Monumens François, and of the work of M. Lenoir.

THE chapel of the palace, and that of the Virgin at St. Germain des Prez, are not only two of the most beautiful pieces of Gothic architecture in Paris, but I believe the most perfect exhibitions that can any where be found of that ‘magic boldness’ which all the efforts of the style were directed to attain. They are the work of Pierre de Montereau, the favourite artist of St. Louis, and one of the illustrious group of architects which the piety of the thirteenth century called forth. We learn, from the inscription on his tomb, that he lived from 1212 to 1266. <sup>a</sup> At that time the principal residence of the French monarch was the ancient palace in the

<sup>a</sup> Louis XII. was the last monarch who resided there.

isle of the city; here he administered justice to his subjects, and from thence it became afterwards the seat of the parliament of Paris.

This<sup>a</sup> pious sovereign engaged Pierre de Montereau to erect in it a chapel, which, when it was completed, served not only for the ordinary purposes of his own devotion, but to which it was his custom to lead his judges, petitioners, and criminals, and in their presence invoke the aid of the Spirit of Truth, before he entered upon the distribution of justice.

The ancient palace of the Counts of Paris had been repaired or rebuilt, about A. D. 1003, by Robert the Pious, who, at the same time, erected a chapel within it, dedicated to St. Nicolas. In the year 1154, Louis le Jeune repaired it; but it is to St. Louis that we owe its magnificent reconstruction, since which it has always borne the distinctive title of ‘La Sainte Chapelle.’

The circumstances which gave rise to this beautiful work are curious and interesting, and are thus related by Guater, Archbishop of Sens, who composed his account by order of the king.

<sup>a</sup> Antiq. et Recherches des Villes se de Franc. Chap. vii.

The French and Venetians having rendered themselves masters of Constantinople in 1204, several of the nobles of the former nations were successively elected to the dignity of Emperor of the East. In 1229, John de Brienne, king of Jerusalem, was raised to the throne, who dispatched his son in law Baudouin to Italy and France for succours against the Greeks. Baudouin arrived at Paris in 1237, and was favourably received by Louis and his Queen Blanche, to whom he was related. While he was there his father in law died, in consequence of which the French affairs in the east were reduced to great danger; Constantinople was besieged by the Greeks by sea and land, many of the nobles deserted to the enemy, and those who remained were compelled to pawn the sacred treasures of the emperors, for relief from the pressure of circumstances. Upon hearing this, Baudouin earnestly implored St. Louis not to suffer the Crown of Thorns, the most precious of all the relics, to be carried any where but into France; adding, that if the king should scruple on account of the sanctity of the relic to purchase it with money, that he, as successor to John de Brienne, would give it to him, since he wished that the country from which himself and his ances-

tors were sprung, should be honoured by so inestimable a deposit; accordingly, as a suitable receptacle for it, St. Louis commenced the present beautiful fabric in 1245. It is said to have cost the amazing sum of 400,000 livres tournois, and the relics and shrines with which it was enriched, to have been worth 100,000 more, as we learn from the inquest which took place at his canonization. It is divided into an upper and lower chapel, the former of which was consecrated by the Cardinal Bishop of Frascati, the Pope's Legate, on the 27th of April, A. D. 1248; and on the same day the lower chapel was dedicated by Philip, Archbishop of Bruges, to the honour of the blessed Virgin.

This celebrated chapel is the most perfect work of its kind, and comprises in no very large space, boldness, richness, and grace. It has also that loftiness of proportion which I have before remarked. \*The chapel of the Virgin at St. Germain des Prez is nearly the same in design, and little inferior in beauty. Let any one examine the general style and the windows of these two structures, and particularly the window in

\* The chapel at Vincennes, which is said also to have been the work of Pierre de Montereau, was probably copied from him, as it was founded by Charles V. A. D. 1379. Topog. Gall. Par. I. 80.

the west front of the Virgin's Chapel, rich and full of mullions, and I am convinced they will be readily allowed to afford a strong additional proof of the superior advances, and the superior beauty of the French architecture of the thirteenth century.\*

It was my intention to have commented upon the church of St. Germain l'Auxerrois, but as I am entirely without dates, I shall only mention, that the windows in their leafy ramifications bear the marks of the fourteenth century.

From these sketches it will clearly be seen, that Paris, with its neighbouring Abbey of St. Denis, contains a most extensive illustration of the architecture of the middle ages, from the eighth to the fourteenth century. It is much to be wished, as the subject is so nearly connected with our own antiquities, that it should be fully and immediately investigated; immediately, because many of these venerable structures are daily suffering decay, spoliation, and in some instances, absolute destruction. As much has been done towards the preservation of many valuable specimens of ancient art by the exertions of

\* Sacellum circuitu spaciosum, fenestris egregiis et magna gloriatur rosa.  
Topog. Gall. Pars. I. 93.

M. Lenoir, I shall take this opportunity of giving my opinion of the Museum which took its origin from his exertions. The zeal of this gentleman in preserving so many valuable monuments of art, and his ingenuity in restoring them, are entitled to praise; I am also ready to award a liberal portion of commendation to the taste which he has displayed in their arrangement; but the spectator of the Museum will still have to regret the want of that judgment in its disposition, which might have converted an interesting exhibition of authenticated remains of antiquity, into a sensible lecture on the progress of the arts, which, without ceasing to please as an object of curiosity, might have conveyed instruction in the most easy and forcible manner.

At a time when a general ruin had spread itself through the churches and abbeys of so vast a country as France, it was certainly a laudable plan to collect from every quarter the most interesting remains of art, and that such a collection might be instructive, to arrange them according to their successive dates in Halls, which should exhibit the characteristic architecture of each century. Unfortunately the execution of this plan is not equal to its conception: a small convent has been allotted for this vast project, which does not and cannot

contain a sufficient number of specimens of each century, especially in the earlier periods of French history. It is perhaps no fault in M. Lenoir that he is restricted to such a building, and being so restricted, that he has not been able to make a more extensive collection; but no good reason or excuse can be alledged for baffling and confusing us by an incongruous mixture of styles in almost every century. The Hall of introduction, which is not as yet arranged,\* was the chapel of the convent; it conducts us to the Hall of the thirteenth century, which was the vestry. Here, in a small dark room, we have a meagre exhibition of the arts of that century, which, by the magnificent structures completed in it, was more glorious to France than any other period of the middle ages, and of which the architecture here exhibited gives the most mean and unjust idea. Having surveyed the few specimens of sculpture it contains, we pass to the hall of the fourteenth century, where a more splendid arrangement presents itself; but the examples, instead of being really of the fourteenth century, are principally and confessedly taken from the Holy Chapel, the work of Pierre de Montereau, who died in 1266, and who gave the plan for it in 1245,; and the rest are from those parts of St.

\* 1802, 1803.

Denis which were rebuilt by Suger in the twelfth century. While the architecture exhibits a retrograde, the sculpture displays an anomalous progressive error; for we find in this collection four statues of apostles which were brought from the church of St. André des Arcs, and are certainly works of the fifteenth century. Such improprieties, in an institution where every thing should afford instruction, are no light offence.

The hall of the fifteenth century comes next in review, and we are astonished to find in the place of Gothic embellishments, a gorgeous display of pilasters covered with arabesques, and all those ornaments which attended the first attempt at classic architecture. Italy herself did not begin to emerge from Gothicism till the middle of the century in question, and the arabesques\* of Raffael at the Vatican, which were the origin of this taste in France, were hardly executed within its limits. At first sight we might be convinced that the Italian fashion, which succeeded the Gothic, could not have reached France before the very last years of the fifteenth century, and that it was highly improper to produce the works of these few concluding years as characteristic of the whole century, the prevailing fashion of which ought certainly to have been chosen.

\* Disc. Hist. des Mon. Franc. 163. Raffael was born 1483—died 1520.

By M. Lenoir's own confession the Italian taste did not prevail till the reign of Louis XII, which began in 1498;<sup>a</sup> and it is extraordinary to read from whence he professes himself to have borrowed his style of the fifteenth century; from a portico erected at Chartres in 1509;<sup>b</sup> from the tomb of Louis XII, executed after 1515;<sup>c</sup> and from the ornaments of the Chateau de Gaillon, productions imitated from Raffael, and equally the works of the sixteenth century.<sup>d</sup> The uniformity and splendour of the Hall is thus preserved by a continued *mis*-representation.

With regard to the monuments, the chief part of the collection is a grand display of the works of Trebati, who did not arrive in France till the year 1560,<sup>e</sup> of Juste and Marchand, both sculptors of the sixteenth<sup>f</sup> century; and to conclude this strange deviation from propriety, an elegant modern bust,<sup>g</sup> after an ancient painting, is exhibited in this chamber, which promises to instruct us in the state of the arts during the precise and limited æra of the fifteenth century. In the succeeding apartments many errors of a similar nature could be easily pointed out, but this collection is already sufficiently ample.

<sup>a</sup> Desc. Hist. des Mon. Fran. p. 14, 28, 163, 181, 185.

<sup>e</sup> Desc. p. 185. Vol. II. p. 144. <sup>f</sup> Desc. p. 164. & seq. <sup>g</sup> Desc. p. 174.

The monuments however contained in this Museum, considered by themselves, are of inestimable value; they go back to the first ages of the French monarchy, ages of which we have no other remains but what are either mutilated or uncertain. Here are well-preserved monuments from the sixth to the eleventh century, which are not only highly interesting in themselves, but are the best, and almost the only guides to the state of the arts in the north of Europe: these therefore in particular, as well as those which succeed them, are so connected with our own antiquities, that they should be as familiar to an English antiquary as the best known remains in our own island. \*The tomb of Fredegond; the capitals from St. Denis and St. Germain des Prez; the sarcophagus of Charlemagne; the vestments and stockings of Ingon; the monument and painting from Clugny; the Mosaics from St. Denis; the tomb of Abelard and of Dagobert; the portal of St. Denis; and the relic box purchased by St. Louis in the Holy Land, are remains as unique as they are precious and invaluable to the history of the arts. I have mentioned these as they are peculiarly

\* Musée des Mon. Franc. et Desc. Hist. Pl. 23, p. 108.—Pl. 39, 60, p. 112.—Pl. 24, p. 109.—Pl. 21, p. 104.—Pl. 58, 57, p. 117, 118.—Pl. 36, 37, p. 142.—Pl. 40, 19. p. 112, 97.—Pl. 62, 61, p. 119, 118.

curious; there are others also of high value; some antiques in particular of the greatest beauty, different Celtic<sup>a</sup> remains of considerable interest; and every lover of the fine arts must feel indebted to M. Lenoir for his preservation, with infinite danger to himself, of that fine specimen of modern sculpture, the monument<sup>b</sup> of the Cardinal de Richlieu, by Girardon. We may naturally rejoice that so many fine monuments should have escaped the Vandalism of the revolution; and we may for a moment admire the taste with which they are disposed; but it is impossible not to regret, that in a city abounding with national edifices, so inadequate a receptacle should have been chosen for this collection; and we cannot but condemn the judgment which, professing to instruct, has adopted a mode principally calculated to confuse and mislead the inquirer.

<sup>a</sup> M. Lenoir has, according to the example of Pelloutier, Mallet, and other writers of his nation, confounded the antiquities of the Celtic and Teutonic nations, p. 82, 87. For the distinction between them see the decisive argument prefixed to Mallet's *Northern Antiquities*, by Dr. Percy, the present Bishop of Dromore.

<sup>b</sup> It may perhaps not be generally known, that at an early period of the revolution, a desperate mob having broken into the chapel of the Sorbonne, with a view to the destruction of this superb monument, M. Lenoir protected and saved it at the hazard of his life, and was actually wounded, and lost a finger in warding off a blow which was aimed at one of the figures of that interesting group.

---

This survey of the Museum may be applied with ease to the publication in which M. Lenoir describes the collection, and the manner in which it was formed, and to which reference has been so often made in the preceding pages. M. Lenoir appears, from this work, to be an antiquary of considerable industry and talents, yet of a vanity and affectation which perpetually expose him to ridicule, while his presumptuous ignorance calls for a more serious reprobation. His sensibility over the tomb of Abelard, and the description of the soldier at St. Denis, are not a little amusing; nor will the reader fail to smile at a certain bragging nationality which reigns through the whole publication: it abounds too with traits of that ignorant infidelity which is at present so prevalent in France; he is a worthy disciple of Volney, and it is impossible to surpass the presumption and absurdity of his decisions respecting St. Denis, and the Mosaic calendar of that abbey.

His knowledge of architectural antiquities is apparently neither very extensive nor correct, yet he takes upon himself to account for the origin of the Gothic style,<sup>a</sup> without a single

<sup>a</sup> Len. Desc. Hist. 27, 122, 146.

argument in proof of his assertion. His merit seems principally to consist in considerable industry, some knowledge of costume, and in his ingenuity and taste: above all in his zeal, and even magnanimity, in defence of what was valuable in the arts. A great deal of information may be extracted from his publication, by the cautious antiquary, notwithstanding its numberless imperfections.

## NOTE FROM THE EDITORS.

---

It is with considerable regret that the Editors of this work here find their employment of revision at an end. Although they feel confident that no one interested in the subject of Gothic Architecture can peruse this volume without deriving much valuable information from it, they are yet anxious to impress upon its readers the very superior advantage with which it would have been offered to them under the immediate and final inspection of its accomplished Author. They are already informed of the extent of his original plan, for the unfinished part of which some few materials are to be traced among his papers, but in too imperfect a state to be laid before the Public. The incompletion of the concluding head of his design, in which he proposed to state his opinion upon *the Origin of the Gothic Style*, is most peculiarly to be regretted, as he united in no common degree the energy and judgment requisite for such an inquiry. But it is not the incompletion of *his plan only* that the reader has to regret, what is presented to him in this volume would unquestionably have been dismissed with much greater accuracy and fullness from the immediate hand of its author, than can reasonably be expected from the superintendence of the most zealous friendship.

It is one thing to suggest useful hints to a living writer, another and much more arduous task to enlarge, and at the same time to im-

prove, upon a posthumous work: in the former case, the mind that conceived will incorporate in the best manner, and at its proper place, what is judiciously suggested; in the latter, the *slightest* corrections are the safest and most satisfactory.

The Editors of this volume, in discharging the office committed to them by their friend, have therefore principally confined their attention to such verbal alterations as the text, sometimes hastily composed, at others difficult to make out, seemed to them to require.

It is hoped that the references will be found correct; from the difficulty however of procuring, in some instances, the works to which the notes refer, it has not been always possible to ascertain this point: where such difficulty did not exist, the reader, it is trusted, will meet with no disappointments.

It may excite some degree of regret, perhaps, that a writer, possessed of the qualifications which distinguished the author of the foregoing work, should have confined his talents to a discussion of so limited and partial an interest as the progress of Gothic Architecture.

His friends, indeed, must greatly lament that one endowed with so many superior attainments, should have been snatched from life without leaving some more important memorial of himself to the world than the present volume, and even that in an imperfect and unfinished state. With respect to themselves, never will the remembrance be effaced of that lively and ardent mind, that most tenacious memory, that dispassionate judgment, that inexhaustible variety of conversation, that warm and affectionate heart, and, above all, to make use of a favourite expression of his own, that 'flow of the soul,' which seemed to be inherent in him, and which never failed to excite the kindness and complacency of all whom he approached; the recol-

lection of these, and many other excellent qualities which distinguished him, will through life be cherished by his friends as the most dear to them perhaps of all memorials.

By those, to whom he was less known, it should be remembered, that his death took place before he had completed his twenty-seventh year; that he was twice engaged in a tour upon the continent, during which every moment of his time was employed in ingenious and interesting, if not in deep and learned research; and that had his life been extended, it was his deliberate purpose to have devoted it to the acquisition of knowledge and science.

He died regretted by a circle of friends and acquaintance, not less numerous and extensive than his own qualifications; more justly lamented by none than by the writer of this note.

## APPENDIX.

---

(A.) The zig-zag moulding, so common in Saxon churches, is to be found in the remains of this palace. See Adams's *Ruins of Spalatro*, Pl. XV. XVI. XXV. XLVI.; where we may also observe, perhaps, the first instances of arches springing from column to column without the intervention of entablature, particularly in the peristyle, which strongly resembles the nave of an early Christian church, Pl. XX.; see also Pl. XVIII. The front of the baths of Dioclesian at Rome, as represented in Palladio's *Drawings*, published by Lord Burlington, exhibits a similar arcade, with archivolt from column to column, p. 25. Projecting figures and heads, supporting consoles, like the corbels of Gothic buildings, the invention of which Mr. Walpole attributes to Marchion of Arezzo, (*Anecd. of Painting*, I. iii.) are also to be found in these remains, see Adams's *Views*, Pl. XII. XV. XVI. XLVI. The grotesque monsters with which the spouts and gutters of ancient buildings are decorated, which the same writer suggests, arose from these fancies, are as old as the Parthenon of Athens, see Stuart's *Antiquities*, vol. ii. c. i. Pl. III. and VI.

(B.) It has been supposed, that the Basilica Siciniana, which in the seventh century was dedicated by Pope Simplicius to St. Andrew, was originally given by Constantine to the Christians, Ciampini *Vetera Monimenta*, c. 1. p. 9. c. xxvii. Ansonius seems to allude to the consecration of pagan buildings: *Basilicæ olim negotiis plenæ, nunc votis pro tua salute susceptis.*—*Grat. Act. pro consulatu*

(C.) A representation of the Basilica Æmilia, on a coin of M. Lepidus, is given by Spanheim, and Ciampini, *Vet. Mon. tab. XXI. fig. 4.* in which the open porticoes of the sides appear. The ancient Basilicæ were in general built in this manner, without walls, and surrounded by open peristyles, 'Peristyles à jour et aérés,' (*Delagardette Ruines de Pæstum*, p. 58.) so as to admit free ingress and egress on all sides: their form is thus described by Ciampini. 'Cingebantur porticibus concameratis ex coaxatis contignationibus immissis in parastata columnis, ant pilis ad-

junctis; superque contignationem altera erat et superior porticus, cujus tectum testudinatum aliis porticibus, parastatis et arcuariis sustinebatur: medium spatium *Pluteus* vocabatur, qui in utrumque latus per intercolumnia peristylorum liberum habebat prospectum. Solebant in eisdem quatuor adesse tribunalia in quibus stabant oratores, ac in orbem iudices. Duæ aderant porticus, inferior ac superior, in inferiori iudices, advocati, et aliorum litigantium turba; in superiori ex una parte feminae, ex alia viri qui iudiciis intererant stare consueverunt, ut videre et jus dicentes audire possent.—Vet. Mon. c. i. p. 7.

(D.) This discovery was made by the industrious Ciampini, who thus describes it: Idemque latus diligenter observavi animadvertique arcus qui superioribus pro fenestris inservientibus subsunt, *tumultuario muro recentis structuræ* fuisse oppletos: ex hac igitur inspectione animo revolve vetus tum hoc admodum et nobile ædificium antiquarum Basilicarum more constructum fuisse, *ut undique partes essent perspicuæ*, utque exprimitur in numismate Basilicæ Æmilianæ. Syn. Hist. de Sac. Ædif. a Const. Mag. constructis, c. vii. p. 122; see also Vet. Mon. c. i. p. 9. and c. ix.

(E.) Mr. Gibbon, whose active and inquisitive mind led him to investigate the revolutions of the arts, as well as the rise and decline of empires, has given the following description of the churches erected by Constantine in Byzantium, Asia Minor, and Syria: ‘The form of these religious edifices was simple and oblong, though they might sometimes swell into the shape of a dome, and sometimes branch into the figure of a cross. The timbers were framed for the most part of the cedars of Libanus; the roof was covered with tiles, perhaps of gilt brass; and the walls, the columns, and pavement, were incrustated with variegated marbles.’ Hist. vol. ii. c. xx. p. 220. This is a very correct general description of the early Greek churches, but it may be doubted whether domes and transepts were adopted in the Christian buildings of the age of Constantine; they are not mentioned in any of the descriptions. The octagonal church founded by that emperor at Antioch, might probably be covered with a dome; but his principal churches at Constantinople, S<sup>ta</sup>. Sophia, S<sup>ta</sup>. Dynameos, [της ἁγίας Δυναμῆως] and others are mentioned to have been constructed in an oblong form, in forma *dromica*, videlicet quadrato in longum perducto. Ciamp. de Sac. Æd. xxvii. 165. xxix. 168. xxxi. 170. At Rome the churches assumed the same shape, in imitation of the Basilicæ. S<sup>ta</sup>. Croce, the only remain of the age of Constantine, and several churches of his foundation, which, though they have been rebuilt or repaired, may probably have retained their original form, are without transepts. St. Paul’s is the first certain instance of their

introduction; and it should be remarked, that the plan of the ancient Basilicæ was very favourable to such an innovation. In these edifices, between the semicircular tribunal of the judges, and the pluteus or great nave, (on each side of which were the porticoes and galleries containing the people) a space was left for the lawyers, which formed a kind of *transverse nave*, though it did not project beyond the walls of the building. This *navis caudica*, as it has been called, when protracted by the fanciful piety of the Christians, gave to their churches externally, as well as internally, the figure of a cross. The church of the monastery of Daphne, near Athens, built under the emperors Arcadius and Honorius, is probably the most ancient instance of transepts in the eastern empire. In the fifth century they were very generally practised. Justinian erected many churches in a cruciform shape, with domes; in Italy the latter were seldom adopted, though at Ravenna we have an instance of one, in the church erected by Galla Placidia, about eighty years after the reign of Constantine. Ciamp. Vet. Mon. c. xxiii. p. 226.

(F.) The following account, which has been selected from several which are given by Italian antiquaries, will afford a clear idea of the ground-plan and arrangement of the first Christian churches. ‘Quæ vero Basilicæ noviter a priscis Christi fidelibus construebantur, *quatuor*, ut refert eruditissimus Capassutius [not. Eccles. fol. 40.] præcipuis partibus constabant. Harum prima, quæ ingressuris obvia erat, græcè Πρῶτος, latine *vestibulum*, seu porticus dicebatur, atque pro foribus ecclesiæ structa erat. Secunda pars græcè Νᾶῶς, latine *navis*, seu *gremium* nominabatur. Huc populus ad divina officia conveniebat; verum pars hæc aliquibus in Basilicis non una sed tribus, ac pluribus navibus distinguebatur, prout videre est Romæ in pluribus veterum Christianorum sacris ædibus. Quinimò in aliquibus non unica sed duplex porticus ad Ethnicorum Basilicarum similitudinem, inverso tamen ordine cum intus sit extructa erat, ut in Basilicis S. Agnetis extra urbis mœnia, et S. Laurentii in agro Verano. Tertia pars aliquot gradibus supra navim assurgens græcè dicebatur ἀμῶν, deducta voce ab ἀναβαίνειν, quod est ascendere, latine vero *chorus* vel *sugestum* nominabatur, qui tamen locus, justâ nonnullorum sententiâ à choro sejunctus est. Quarta denique pars græce Ἱεράριον, Ἱερὸν Βήμα, latine *sanctuarium* dicebatur. Hujus in medio situm erat sub tabernaculo, altare primum ad quod sacerdos sacrum celebrans stabat facie ad populum versa; quo etiam situ Romæ visuntur altaria præcipua, nimirum Basilicarum præcellentium Lateranensis, Divi Petri in Vaticano, Divi Pauli Liberianæ, et aliarum plurimum ecclesiarum. Hujus modi locus erat in speciem quadratam columnis sublimibus undique circumseptus, quarum media erant interstitiis ex ligno instar retis circumclusa, ut loquitur Eusebius Cæsariensis. [Hist. Eccles. lib. x. cap. 4.] Aderat insuper *tribuna*, ubi per interiorem circuitum dispositæ erant exhedræ, atque his editor, cathedra

episcopalis in medio atque intimo hemicyclo assurgebat.' Theatrum Basilicæ Pisanæ, cura Josephi Martinii, Canon. cap. iii. p. 8. See also Fontana Templum Vaticanum, lib. ii. and Ciamp. Vet. Mon. c. i. and ii. and de Sac. Ed. passim.

(G.) Lebeuf, sur S. Renobert Eveque de Bayeux, Recueil, tom. i. p. 194: 'Il n'y a presque plus que les Italiens,' says this learned and sensible antiquary, 'qui persistent dans le système contraire sur la mission des premiers Eveques des Gauls. Ils continuent toujours à écrire, que nous avons été éclairés de la lumière de la foi dès la fin du premier siècle ou au commencement du second: en France on ne fait pas remonter si haute cette époque, parce qu'elle paroît mal fondée. C'est un sentiment aujourd'hui généralement abandonné en France. lb. 229. See also De Mezeray. Etat. de la Religion dans les Gaules II.

(H.) The same historian, relating the progress of these missionaries at Biturges, says, *Illis parvam ædificandi facultatem habentibus, civis cujusdam domum de qua ecclesiam faciant expetunt; qui vero crediderant ex pauperibus erant; hi non obtenta a quo petierant domo, Leocadium quendam primum Galliarum senatorem . . . . repererunt, qui . . . Christianus factus domum suam fecit ecclesiam.*' Hist. Franc. i. 29. Gratian, the first bishop of Tours under Decius, per cryptas et latibula cum paucis Christianis mysterium diei Dominici celebrabat; sed anno Constantis primo Lidorins ordinatur episcopus primaque ab eo *ex domo* cujusdam senatoris *basilica facta est*. Ille ædificavit ecclesiam primam infra urbem, cum jam multi Christiani essent. Hist. Franc. x. 31.

(I.) Christian churches were built in many parts of the Roman empire before the establishment of the religion by Constantine. The rage of Dioclesian was inflamed by the sight of the church of Nicodemia, in alto enim constituta ecclesia ex palatio videbatur. Lactantius de Mort. Persec. c. xii. Ciampini has collected a long, but in many parts suspicious, list of the churches before Constantine. Vetera Monimenta, c. xviii. p. 156.

(K.) The humanity of Constantius, who at the time of this furious persecution governed Gaul and Britain, is eloquently celebrated by Lactantius. *Parietes qui restitui poterant dirui passus est, verum autem Dei templum quod est in hominibus incolume servavit.* De M. P. c. xv. His annotator (Dufresnoy) remarks on the passage, 'Ita ecclesias in nonnullis Galliarum locis diruipassus est, nullo jussit edicto. Not. 202.

(L.) The Abbé Lebeuf, from an accurate examination of the catalogues of

bishops, believes that Christianity had hardly penetrated into the north of France in the fourth century, and that idolatry was not entirely extirpated till long afterwards. Il est certain qu'il y avoit (des infideles) encore au *septième* siècle dans plusieurs endroits du Royaume. Le pais de Caux étoit rempli des idolâtres dans ce siècle. S. Romain qui fut fait eveque de Rouen in 626 trouva encore dans son territoire de Temples et d'Idoles à détruire. Il y en avoit de consacrés a Jupiter, Mercure et Apollon, et meme un dédié a Venus dans la ville de Rouen. Et en effet le Paganisme subsistoit bien encore vers le commencement du meme siècle dans le Berri et aux environs. Lebeuf sur S. Renobert. Rec. tom. i. 217. 220.

(M.) The old church of St. Peter at Rome was covered with gilt bronze tiles. Medianæ navis et transversæ crucis laquearium magnis *aneis tegulis* sesquipedalibus pretiosissimis, ex *ære corinthio deaurato* coopertum mirificabatur. Ciamp. de Sac. Æd. iv. 35. The church of the Holy Apostles, built by Constantine at Byzantium, had a similar decoration. Euseb. Vit. Constan. iv. c. 58, 59, 60. 'The Emperor Constans, in his rapacious visit, stripped the bronze tiles from the Pantheon,' to ornament some of the new buildings at Constantinople. Gibbon, Hist. vol. vi. p. 629. This decoration is always mentioned as of singular splendour by the ancient writers; yet it seems certain that it was thus early, in some instances, introduced into France. See the accounts of St. Germain des Prez, and St. Denis, in part ii.

(N.) Besides the individual instances of skill which are so frequently to be remarked among the clergy of the middle ages, many convents seem to have been schools of the arts. St. Ouen, a writer of the sixth century, describing the monastery of Solognac, near Limoges, says, 'Est autem congregatio nunc magna, diversis gratiarum floribus ornata; habentur ibi et *artifices plurimi, diversarum artium periti.*' Vita S. Eligii i. 16. Au *neuvième* siècle *tous les arts* étoient exercez a l'abbaye de Saint Gal par des religieux. Lebeuf Etat. des Sciences, Rec. ii. 138. *Painting, sculpture, working in gold, silver, brass, and iron,* were taught in Glastonbury in the tenth century, as well as philosophy, divinity, and music. Osbern Vita S. Dunstani, lib. i. apud Ang. Sac. ii. The monastery at St. Benigne at Dijon, in the eleventh century, under the Abbat William, exhibited the same picture. Aliqui litteris bene eruditi, alii *diversorum operum magisterio docti*, alii *agriculturæ præditi*. Chron. S. Benig. Divion, apud Spicileg. i. 433. In England the arts flourished so much in convents to the last, that Gyfford, a visitor employed by Thomas Cromwell, pleads in behalf of the house of Wolstrop, 'That there was not one religious person there, but that he could and did use either embrothying, writing books in a very fair hand, making their own garments, *carving, painting, or grafting.*' Strype's Eccl. Mem. vol. i. 165. Walpole's Anec. p. 110.

(O.) The churches of St. Agatha, of Saints Nazarius and Celsus, and the baptistery of St. John, had been founded at Ravenna, during the fifth century, on a scale and at an expense equal to the finest structures of the same kind at Rome. Ciamp. Vet. Mon. c. xx. xxiii. xxv. Theodoric, chief of the Ostro-Goths, and King of Italy, had also erected there, in the next century, several extensive buildings, in which he was assisted by Aloisius, Daniel, Simmæus, and Boetius; who are said, by Cassiodorus, to have been men of great genius in the arts. Felib. Arch. III. 138. 142. From these latter works, many of which were of a civil nature, and chiefly composed of ancient materials, it is probable that Charlemagne collected the mosaics and marbles which he transported to Aix.

(P.) Hist. Dec. and Fall. vol. vi. c. 71. p. 629. Mr. Gibbon refers to the original grant of the spoils of Ravenna (*musiva atque marmora*) by Adrian I. preserved in Muratori. Scrip. Ital. tom. iii. the testimony of the Saxon poet of the ninth century, *de reb. gest. Car. Magni.* and the Chronicle of Sigebert. Scrip. Rerum. Franc. tom. v. the account of Eginhard [Ann. 829] is no less explicit. *Plurimæ pulchritudinis Basilicam Aquis-grani opere mirabili extruxit; auroque et argento et luminaribus, atque ex ære solido cancellis et januis adornavit: ad cujus structuram cum columnas et marmora aliunde habere non posset, a Roma et Ravenna devehenda curavit.*—*Porticum etiam inter Basilicam et Regiam operosa mole condidit: malo aureo tecti Basilicæ culmen ornavit.* The monk of St. Gal seems to contradict this, when he says, *S. Dei Genetricis Basilicam, quam capellam vocant, tegulis plumbeis textit;* but it is probable that roof was of lead, and adorned at the top with gilt ornaments.

(Q.) None of these buildings remain. In *annalibus Fuldensibus* et in *Mettens: et Bertin. reperitur*, Nordmannos Aquense pallatium, ubi in Capella Regis equis suis stabulum fecerunt, anno DCCCXXCI. incendisse. Valesii Not. Gall. p. 29. Gaufridus, in his Life of St. Bernard, mentions that the church existed in his time; and it appears, or at least some part of it, to have still remained in the seventeenth century. Ciamp. Vet. Mon. i. 7. It was constructed in the manner of the ancient Basilicæ, with two porticoes, or colonnades, one over the other on each side, like the churches of St. Lawrence and St. Agnes, which were built at Rome about the same time. Ib. de sac. æd. c. vi. ix.

(R.) Ciampini, in almost every church he describes, complains of the *combinatio et incompta conglutinatio unius cujusque ordinis columnarum, epistyliorum et omnis generis cælaturarum, quas e collapsis imperatorum ædificiis, et ex idolorum templis rudes artifices collegerant, et in novas fabricas nulla architectonicæ*

artis lege servata congesserant. Vet. Mon. ii. 13. In the church of St. Lawrence particularly. In hoc omnis fere bases, capitula et columnæ inter se discrepant. De Sac. æd. vi. 115.

(S.) The churches in Italy were roofed in this manner from the fourth to the eleventh century. In old St. Peter's the beams were kept unornamented and exposed, and above them the church was covered with shingles of deal. Totum templi tectum ligneum, magnis quadratis trabibus contignatum, abiegnis que tabulis levigatis irretitum atque imbricatum erat. Ib. de Sac. æd. iv. 35. Roofs constructed nearly in the same style still remain at St. Paul's and St. Clement's, at Rome, the cathedral of Orvieto, and other places.

(T.) Igitur infra supra dictum millesimum, tertio jam fere imminente anno, contigit in universo pene terrarum orbe, præcipue tamen in Italia et in Galliis innovari Ecclesiarum Basilicas; licet pleræque decenter locatæ minime indignissent; æmulabatur tamen quæque gens Christicolarum adversus alteram decentiore frui: erat enim ac si mundus ipsè excutiendo semet, rejecta vetustate passim *candidam Ecclesiarum vestem* induceret. Glaber Rodulphi Hist. lib. iii. c. 4. Sed unde ista? non aliunde puto, quam ex eo, quod cum viderent Fideles jam lapso tempore evanuisse quæ de mundi interitu fuerant constante assertionem prædicta et passim credita, quasi tanto discrimine liberati (perculsi enim timore homines ad ædificanda etiam pia loca remissi fuissent), alacres ad ecclesias jam permansuras erigendas, vel innovandas, restituendas ac dilatandas insurrexere. Baronius Annales Eccl. tom. xi. p. 23. an. 1003.

(U.) Domnus Præsul expensas tribuendo ac columnas marmoreas ac lapideas undecumque adducendo et Rev. Abbas magistros conducendo et ipsum opus *dic-tando*, insudantes dignum divino cultui templum construxerunt. Inter monachos fuit quidam juvenculus vocatus Hunaldus, solertis ingenii—injunxit illi [Vuillelmus sc.] curam hujus sacri periboli, quem tanta prosecutus est cura ut pene totum quicquid fuit ornamentorum in hac basilica, ejus studio sit aggregatum. Vetus Chronicon Abb. S. Benig. Divionensis apud Dacherii Spicilegium, tom. i. 434, 440. This chronicle, which is written by a monk of the convent in the same century, contains a copious description of the work of the abbot William, of which the round church at present remaining was only a part. The great church having been damaged by the falling of the middle tower in the time of the abbot Hugh de Arc, he began to rebuild it entirely, and the sanctuary was finished, and the shrine replaced with great ceremony, in 1288. Spicileg. i. 478.

(X.) Two belltries were raised in 1145, one of stone, and the other of wood covered with lead: the latter being burnt by lightning in 1506. Jean Texier, a celebrated architect and sculptor of the town, was employed to construct in its place a stone steeple, which he finished in 1514, and its beauty has since passed into a proverb. It is a work of extreme delicacy, and rises to the height of 378 feet. The same artist was afterwards engaged in repairing and ornamenting other parts of this cathedral, and died in 1529. *Ib.* 130. 132.

(Y.) The cathedral of Lyons was begun in the twelfth century. Among the archives there are writings of the latter part of this age conveying benefactions for the continuation of the fabric (*ad opus majoris ecclesiæ*), and for the same purpose the metropolitan chapter in the act of foundation of Nostre Dame de Fourviere, in 1192, reserve the right of all quarries of marble or freestone that might be found in the mountain on which it was to be erected. *Hist. Litt. de Lyon par le P. de Colonia ii. c. v. p. 65, 66.* The choir is of a peculiar construction, it is septagonal, and though principally Gothic, contains some mixed work. The use which is said to have been made of the remains of the Temple of Augustus, *ib. p. 89. 95. Du Chesne Antiq. p. 645. Dumont. Voyages, i. 83.* may perhaps account for the peculiarities and classical appearance of some of its ornamental parts. It was probably begun about the year 1180.

(Z.) The abbey church of St. Victor near Paris, and the cathedral of Beauvais, may be classed among the works of the thirteenth century, though I have not been able to ascertain their dates. The former contains a rose window of extraordinary magnificence; and the choir of the latter has been generally considered the most beautiful in France; unfortunately, however, it no longer exists: in consequence of the neglected state in which it had remained since the revolution, the vaulting of the roof, so much admired for its boldness, gave way, and fell suddenly in the night, at the beginning of December 1802.

(AA.) A beautiful rose window, or *œil des aisles* in this taste, is seen in the church of St. Oüen. We are informed, by an epitaph in a chapel there, that it was executed by a common mason; who, jealous of the fame which the chief architect had acquired by one he had constructed, obtained leave to undertake a second, in which he so surpassed the work of his master, that he was put to death by him in a passion. The citizens testified their admiration of his skill, by giving him a tomb in the church. (*Du Chesne Antiq. p. 967.*) The same story is told at Lincoln, with this difference, that the English master-mason, instead of killing his journeyman, hangs himself. A similar tradition is also preserved at Roslin.

(BB.) See *Million Antiq. Nat.* tom. iii. No. 28. The tombs of Philip the Hardy, and John sans Peur, Dukes of Burgundy, are fine specimens of the state of sculpture in the fifteenth century. These dukes, who reigned in Holland and the Low Countries as well as Burgundy, were among the greatest princes of Europe, and were probably served by the best artists of the time. The monument of Philip the Bold, who died in 1404, was executed by his sculptor, Claux Sluter, assisted by Claux de Voûzonne, nephew to the former, and Jaques de la Barse. The tomb of John, who was assassinated in 1419, at the bridge of Montereau-faut-Yonne, was made by Jean de Versà, called also Jean d'Acora, assisted by Jean de Droguès and Antoine le Monturier. This is the account given in the History of the Convent. Acora is in Arragon; but it is here perhaps mistaken for Acerra, a city of Naples. Versa may likewise be Aversa in the same country.

(CC.) Jean Texier of Chartres, François Marchand of Orleans, François Gentil of Troyes, and Jean Juste, who was sent to Rome to study the new style by the Cardinal d'Amboise, and afterwards employed by that minister in ornamenting his palace, were ingenious sculptors of this school. Paulo Trebuti, also an Italian artist, executed several fine works in France in the sixteenth century. The Chateau de Gaillon exhibits the most perfect example of the taste which prevailed at that time. See *Musée des Mon. Fran.* tom. ii. & iii.

(DD.) Bouillart [*Hist.* i. 5.] says, that the meadow was called Locotitia from these remains; and some histories of Paris relate, that the statue of Isis was preserved in the north wall of the church of St. Germain, as a monument of antiquity, till the beginning of the sixteenth century, when an ignorant woman having been discovered by the sacristan on her knees before it, offering it lighted tapers, and mistaking it for the Virgin Mary, it was broken in pieces by order of the abbot. [*Du Breul Antiq. de Paris*, p. 193. *Topograph. Galliæ*, tom. i. p. 33.] Bouillart, however, denies that this could have been a statue of Isis, particularly as it was made of plaister; but the description of Corroset, (c. i. p. 7.) who had seen it, and who describes it as 'maigre, haute droit, noire pour son antiquité et nue sinon avec quelques figures de linge enlasse en tous ses membres,' seems in favour of its Pagan origin. The idea, however, that the names Loucotetia, Lutetia, or Paris, were derived from the worship of this goddess, is totally false and unfounded. These words, which have been the subject of so many vain etymologies, are originally Gaulish or Celtic, and we are unable to discover their meaning. See *Dissert. sur Isis et sur Cybele au sujet du nom de la ville de Paris*, by the academician Moreau de Mautour.

(EE.) Two stone capitals, discovered in the course of the excavations which were made in the church after the revolution, are supposed to have belonged to this ancient building; one of them bears a slight resemblance to the Corinthian order; the ornaments of the other are men's heads. See *Musee des Mon. Fran. rom.* ii. pl. 59. A specimen of the art of Mosaic, nearly of the age of this church, is seen in the tomb of Fredegonde, constructed by order of her son, Clothaire II. about the year 600. See Bouillart *Hist.* p. 12. et *Mus. des Mon. Fr.* pl.

(FF.) Dom. Felibien *Hist. de Paris.* liv. ii. 20. The high altar was never dedicated to Saint Germain until 1678, when it was consecrated in his name and that of St. Vincent, previous to which the dedication of the church was in honour of the Holy Cross and St. Vincent. Felibien thinks its designation by the title of St. Germain, which we find occasionally used before the translation, particularly by St. Ouën, who lived in the seventh century, gradually became general after that event. The early preference of his name is ascribed by Bouillart, with great probability, to the miraculous properties attributed to his body. *Response aux Remarques, &c.* *Hist.* p. 299, 300.

(GG.) Morardus bonæ memoriæ Abbas, qui istam ecclesiam a Paganis ter incensam evertens, a fundamentis novam re-ædificavit: turrin quoque cum signo multaque alia ibi \* \*. A sarcophagus, containing the body of an abbot, supposed to be that of Morard, was dug up near the high altar soon after the revolution. See an interesting account of this transaction *Mus. des Mon. Fran.* et pl. 20. This coffin was believed, by Monfaucon, to enclose the remains of Cherebert; but as the body is undoubtedly an abbot's, the former opinion is very probable.

(HH.) Some curious occurrences took place at the abbey of St. Germain during these commotions, which are related by Bouillart. In 1562, the Princess Renée de Bourbon, Abbess of Chelles, fled with her convent to this monastery for safety; the nuns passed a month in the abbatical palace, 'gardant une retraite tres exacte;' they chanted mass and vespers every day, 'd'une maniere edificante.' in the grand chapel of the Virgin; and at the other canonical hours they used the private chapel of the abbot's house, singing in a low voice, lest they should disturb the monks at their devotions in the great church. *Hist.* v. 15. In 1589, the danger approached Paris, the governor of which sent 150 arquebusiers to garrison the abbey. On All Saints day, at nine in the morning, as the monks were walking in procession round the cloister before high mass, the king's trumpet was heard at the gates. This created great alarm and confusion; the ceremony was abridged,

and was said instead of sung. Most of the brotherhood were much terrified, though some mounted the walls and exhorted the soldiers to defend them; nearly all, however, retired to their cells, or to the church, to dispose themselves by prayer and penitence for the event. At midnight, as they were chanting matins, a second trumpet was heard, accompanied by threats of fire and extermination; upon which the captain of the garrison capitulated, and at nine in the morning marched out, and twelve of the royal army took possession of the abbey. About an hour afterwards the king himself arrived, the monks presented themselves at the gate to receive him, but passing forwards without regarding them, he desired to be shewn the stairs of the great tower, which he hastily ascended, and for some time reconnoitred Paris with great attention. It is added, that he left the monks in profound astonishment by departing without asking to see their church. Hist. v. 24.

(II.) T. F. Felibien, in his *Lives of Architects*, suggests that the idea might arise from the rich hangings, which were not uncommon in those times, iii. 158. A poet of the ninth century celebrating the arrival of the body of St. Cornelius at Compiègne, speaks of the splendour of this sort of ornament.

Emicabat namque Templum

Serieis in Palliis

Aureis Argenteisque.

Hist. Transl. Corp. S. Corn. apud Compendium  
Lebœuf. Rec. i. 36.

That the exterior porticoes of churches were often ornamented with splendid hangings, see Ciampini de Sac. *Ædific.* c. xxiv. 154. The exterior vestibule of the church of St. Sophia at Constantinople, built by Justinian, was hung with aurea vela, vela auro contexta et variegata. *Ib.* xxvii. p. 166. Gregory of Tours, describing the baptism of Clovis at Rheims, Velis depictis adumbrantur plateæ ecclesiæ. Curtinis albetibus adornantur. Hist. Franc. ii. 31.

(KK.) At Riddrefield, now Rotherfield, in Sussex. Lands being given by Berthwald Duke of the South Saxons, about the year 800, to the abbey of St. Denis in France, a convent of monks from that house was fixed here. Domesday, p. 549. The church is dedicated to St. Denis. Alien Priories, vol. ii. p. 119. In the year 960, Vitel, who had the care of the temporalities of the abbey of St. Denis, travelled to York to complain to Edgar of the extortions practised by Togred, his steward, on the villains of these estates, when his complaint was immediately attended to and redressed. Hist. St. Den. ii. 43. et Preuves, No. 105.

(LL.) Hist. St. Den. iii. 6. The same King 'gave the monastery of Deerhurst in Gloucestershire, with all the lands belonging thereunto, to the abbey of St. Denis in France, to which it became a cell of Benedictine Monks. It had eight lordships, and was accounted worth 300 marks a year, when it was sold by the abbot and monks of St. Denis to Richard Duke of Cornwall in 1250.' Alien Priorities, vol. ii. p. 118. This abbey had possessions at Wilt in Worcestershire, and at Trigton in Oxfordshire; probably Trigton and Tintou, or Teinton, are the same place.

(MM.) The passage in which this is mentioned gives a curious trait of the taste and enterprise of Suger. 'In agendis siquidem hujusmodi apprimè de convenientiâ et cohærentiâ antiqui et novi operis sollicitus unde marmoreas aut marmoreis æquipollentes haberemus columnas, animo supererat ut ab urbe (Romæ enim in Palatio Dioclesiani et aliis Thermis sæpe mirabiles conspexeramus), per mare Mediterraneum tutâ classe exinde per Anglicum, et per tortuosam fluvii sequanæ reflexionem, eas magno sumptu amicorum, inimicorum, etiam Sarracenorum proximorum conductu haberemus. Liv. de la Dedicace de l'Eglise de St. Denis.

(NN.) It is impossible at this moment, from a survey of the church of St. Cross, to determine, with any certainty, whether the intersecting arches of the chancel were originally pierced, so as to form the lancet windows which we now see; indeed the building, instead of appearing, as Mr. Milner suggests, 'a collection of architectural essays, or an effort of that great encourager of the arts (Henri de Blois), to produce a style of architecture more excellent and better adapted to ecclesiastical purposes;' seems made up of successive repairs and alterations executed at various times, and some of them in a very clumsy manner. It is absurd, and contrary to fact, to suppose that the discovery of the pointed arch took place here, and since the same author allows that 'the windows of the upper part, together with the groining of the nave, and the west window and door, bear demonstrative proofs of being subsequent alterations;' it is not only possible, but probable, that the lancet windows of the chancel were 'subsequent alterations' also. At any rate, nothing certain can be built upon so doubtful a monument.

(OO.) The great west window, and some others in Westminster Abbey, were put up by the abbot Islip, in the time of Henry VII. (Stowe, 848). The windows which remain of the thirteenth century, exactly accord with Mr. Bentham's description of the richest kind that were in use during the reign of Edward III. 'They were usually divided,' he says, 'by a pillar, or mullion, and ornamented

on the top with a trefoil, single rose, or some such simple decoration, which probably gave the hint for branching out the whole head into a variety of tracery and foliage, when the windows came afterwards to be enlarged. Hist. Ely, p. 39.

(PP.) Henry III. began to rebuild Westminster Abbey in 1245. Matt. Paris Hist. p. 581. 861. Among other contemporary buildings in England may be mentioned the nine altars at Durham, . . . The east end of Ely Cathedral (1234—1238) MS. Bibl. Cotton Tiberius, B. 2. fol. 246. The Temple church ( . . . ), Chapter-house, Oxford; all with lancet windows. Tintern and Netley Abbeys (begun 1239, Turner), with the addition of only a single mullion and rose.

(QQ.) Salisbury cathedral, and those parts of Westminster Abbey which have not been rebuilt since the fire in 1299, afford no example of broad and enriched windows. The first which I can discover in England are in the chapter-house of York, and at the east end of Lincoln cathedral. It is remarkable that Dugdale decides that the chapter-house of York was built at the end of Henry the Third's reign from the style of the windows (Dugdale's History of the Cathedral at York, p. 18), and that these are nearly in the proportion of those of Amiens, viz. 48 feet by 17. (See Halfpenny's Ornaments of York Cathedral, Plates 70 and 102.) The windows at the east end of Lincoln Cathedral were probably put up at the end of Henry the Third's reign, or at the beginning of the next, under Bishops Richard de Gravesend and Oliver King. (See Observations on Lincoln Cathedral, by Mr. Essex. Archæologia, vol. iv.)

(RR.) It may be remarked, that the only persons who have been discovered as connected with the building of Salisbury and Westminster were Englishmen. Helias de Berham (Canon of Salisbury), à primâ fundatione (Temp. Henry III.) Rector fuit novæ fabricæ per 25 annos, et Robertus cæmentarius rexit per 25 annos. Leland's Itin. vol. iii. p. 60.

Helias de Berham was probably, as Mr. Walpole supposes, the Elyas who repaired King John's palace at Westminster in 1209, and who was certainly an architect. Anecdotes of Painting, vol. i. p. 4, and 191.

It appears, from Dart's History, that Edward Fitzodo, a favourite artist of Henry III. was master of the works at Westminster Abbey, vol. i. p. 96. 'The Fitzotho's were Germans, who had settled in England from the time of Henry I. Anecdotes of Painting, p. 15. This, however, is a mistake of Mr. Walpole. The Othos had settled in England at the time of the Conqueror, as we find by the Domesday Book. We read there, under the head of Suffolk, 'Terra Morehari

Comitis quem Will. Camerarius et Otho Aurifex servant in Mansu Regis.' In Essex, among the tenants in capite, is the name of Otto Aurifaber. (See Domesday Book illustrated, by R. Kelham, p. 132, 139.)

Otto, the Goldsmith, was ancestor of Thomas Fitzotho, mint-master, or engraver to the king's mint, and the last of the male line died 1282 (Morant, vol. ii. p. 305). This last was no doubt the architect of Westminster Abbey.

In the same work (Anecdotes of Painting) Mr. Walpole has preserved an order from Henry III. 'Magistro Johanni de Glouc: cæmentario suo et custodibus operationum Westm.' p. 25.

Quare accitis undique etiam è longinquo qui usquam poterant reperiri opificibus ecclesiæ jecit fundamenta. Godwin, 343.

We are here told, that the best artists were collected from every quarter, and even from a distance; and we may readily suppose, that the best English artists were brought together on the occasion; but we may well conceive that the French architects, certainly those of any celebrity, were fully employed in the vast works then carrying on in their own country; the cathedrals of Rheims, Lyons, Amiens, Notre Dame at Paris, the abbey churches of St. Denis, St. Nicaise, &c.

THE END.

A LIST OF BOOKS  
ON THE VARIOUS BRANCHES OF  
*ARCHITECTURE AND BUILDING,*

PUBLISHED BY

J. TAYLOR, at the ARCHITECTURAL LIBRARY,  
No. 59, HIGH HOLBORN, LONDON.

DOMESTIC AND ORNAMENTAL ARCHITECTURE.

1. **D**ESIGNS FOR VILLAS and other Rural Buildings. By EDMUND AIKIN, Architect, with Plans and Explanations. Together with an introductory Essay, containing Remarks on the prevailing Defects of Modern Architecture, and an Investigation of the Style best adapted to the Dwellings of the present Time. On 31 Plates, large Quarto, 1l. 11s. 6d. Boards.
2. *A Series of Designs for Villas and Country Houses*; adapted with Economy to the Comforts and to the Elegancies of Modern Life; with Plans and Explanations to each; to which is prefixed, an Essay on Modern architectural Taste. By C. A. BUSBY, Architect. Elegantly engraved on 24 Plates, large Quarto, 1l. 5s. Boards.
3. *Architectural Designs for Rustic Cottages, Picturesque Dwellings, Villas, &c.* with appropriate Scenery, Plans and Descriptions; to which are prefixed some critical Observations on their Style and Character; and also of Castles, Abbies, and ancient English Houses; concluding with Practical Remarks on Building, and the Causes of the Dry Rot. By W. F. POCOCK, Architect. Elegantly engraved on 33 Plates, large Quarto, Price 1l. 11s. 6d. in Boards.
4. *Sketches in Architecture*, consisting of original Designs for Cottages and Rural Dwellings, suitable to Persons of moderate Fortune, and for convenient Retirement; with Plans and appropriate Scenery to each; also some general Observations. By T. D. W. DEARN, Architect to His Royal Highness the Duke of Clarence. Elegantly engraved on 20 Plates, large Quarto, Price 1l. 7s. in Boards.
5. *Plans, Elevations and Sections of Hot-Houses, Green-Houses, an Aquarium, Conservatories, &c.* recently built in different Parts of England, for various Noblemen and Gentlemen. By G. TOD, Surveyor and Hot-House Builder. Including a Hot-House and a Green-House in Her Majesty's Gardens at Frogmore. On 27 Plates, elegantly coloured, with proper Descriptions, (Folio.) 2l. 12s. 6d. in Boards.
6. *Lugar's Country Gentleman's Architect*, containing a Variety of Designs for Farm Houses and Farm Yards of different Magnitudes, arranged on the most approved Principles for Arable,

Comitis quem Will. Came  
Essex, among the tenants  
day Book illustrated, by J

Grazing, Feeding and Dairy Farms, with Plans and Sections, shewing at large the Construction of Cottages, Barns, Stables, Feeding Houses, Dairies, Brewhouse, &c. with Plans for Stables and Dog-kennels, and some Designs for Labourers' Cottages and small Villas. The whole adapted to the Use of Country Gentlemen about to build or to alter. On 21 Plates, with full Explanations to each. Quarto. 1l. 5s. in Boards.

7. *Lugar's Architectural Sketches*, for Cottages, Rural Dwellings, and Villas; with Plans; suitable to Persons of genteel Life and moderate Fortune; preceded by some Observations on Scenery and Character. On 38 Plates, Quarto. Boards 1l. 11s. 6d.
8. *Randall's Designs* for Villas, Casinos, Mansions, Lodges, and Cottages, in the Grecian, Gothic, and Castle Styles; engraved in Aquatinta, on 34 Plates, folio, 2l. 12s. 6d.—The same on Imperial Folio Paper, 3l. 13s. 6d.
9. *Gyfford's Designs* for Small Picturesque Cottages, Hunting Boxes, Park Entrances, &c. Part I. On 20 Plates, Quarto. 1l. 1s. Boards; or elegantly coloured, 2l. 2s.
10. *Gyfford's Designs* for Elegant Cottages, and small Villas, in Perspective, with General Estimates. Part II. on 26 Plates, Quarto. 1l. 11s. 6d. Boards.—The same elegantly coloured. 2l. 12s. 6d.
11. *Plaw's Sketches for Country Houses, Villas, and Rural Dwellings*; calculated for Persons of moderate Income, and for comfortable Retirement. Also some Designs for Cottages, which may be constructed of the simplest Materials; with Plans and general Estimates. On 42 Plates, Quarto, 1l. 11s. 6d. in Boards.
12. *Plaw's Ferme Ornée, or Rural Improvements*, a Series of Designs, suited to Parks, Plantations, Rides, Walks, Rivers, Farms, &c. consisting of Fences, Paddock House, a Bath, Dog-kennels, Pavilions, Farm-yards, Fishing-houses, Sporting Boxes, Shooting-lodges, Single and Double Cottages, &c. calculated for Landscape and Picturesque Effects. On 38 Plates, with appropriate Scenery, Plans, and Explanations. Quarto. In Boards, 1l. 11s. 6d.
13. *Plaw's Rural Architecture*, or Designs from the simple Cottage to the decorated Villa, including some which have been executed. On 62 Plates, with Scenery, half bound, 2l. 2s.
14. *Laing's Hints for Dwellings*, consisting of Original Designs for Cottages, Farm-houses, Villas, &c. plain and ornamental; including some Designs for Town-houses. On 34 Plates, Quarto, 1l. 5s. in Boards.
15. *Soane's Sketches for Cottages, Villas, &c.* with their Plans and appropriate Scenery; to which are added six Designs for *improving and embellishing Grounds*, with Explanations. On 54 Plates. Folio. 2l. 12s. 6d. half bound.
16. *Soane's Plans, Elevations, and Sections of Buildings*, executed in the Counties of Norfolk, Suffolk, York, Wilts, Warwick, Stafford, Somerset, &c. On 47 Folio Plates. 2l. 12s. 6d.

Books published by J. TAYLOR, High Holborn.

17. *Plans, Elevations, and Sections of Noblemen's and Gentlemen's Houses, Stabling, Bridges, &c.* By James Paine, Architect. 2 Vols. 176 large Folio Plates. 6l 16s. 6d. half bound.
18. *An Essay on British Cottage Architecture*, exemplified by fourteen Designs, with their Plans, &c. on 23 Plates. By James Malton. Quarto, Boards, 1l. 11s. 6d.
19. *Miller's Designs* for Cottages, Farm-houses, Country-houses, Lodges for Park Entrances, and wooden Gates, with Plans the Offices. On 32 Quarto Plates. Sewed, 10s. 6d.
20. *A Series of Plans, for Cottages or Habitations for the Labourer.* To which is added, an Introduction, containing many useful Observations on this Class of Building, tending to the Comfort of the Poor, and Advantage of the Builder; with Calculations of Expences. By the late Mr. J. Wood, of Bath. 30 Plates, large Quarto, 1l. 1s.
21. *Crunden's Convenient and Ornamental Architecture.* Original Designs; calculated both for Town and Country. On 70 Copper-plates. 16s. Boards.
22. *Middleton's Architect and Builder's Miscellany.* Designs for Country and Town Houses, Temples, Bridges, Lodges and Gates, &c. On 60 Plates, coloured. Octavo. 1l. 1s. bound.
23. *Middleton's Designs* for Gates and Rails, suitable to Parks, Pleasure Grounds, Balconies, &c. On 27 Plates. Octavo, 6s.
24. *Decorations for Parks and Gardens*, Designs for Temples, Prospect Towers, Cattle Sheds, Ruins, Bridges, Green-houses, &c. Also a Hot-house, and Hot-wall. On 55 Plates, Octavo. 10s. 6d. sewed.
25. *Soane's Designs* for Temples, and other Buildings, for decorating Pleasure-grounds. On 38 Plates, Octavo; sewed, 6s.
26. *Grotesque Architecture.* Plans, and Elevations for Huts, Hermitages, Chinese, Gothic, and Natural Grottos; many of which may be executed with Flints, irregular Stones, rude Branches and Roots of Trees; 28 Designs. By W. Wright. Octavo; sewed, 4s. 6d.
27. *The New Vitruvius Britannicus*; consisting of Plans and Elevations of modern Buildings, public and private, erected by the most celebrated Architects. On 142 Plates. By G. Richardson, Architect. 2 Vols. Imperial Folio, half bound, 11l. 11s.
28. *Chambers's (Sir William) Treatise on Civil Architecture*, third Edition. Folio; half bound, 4l. 4s.
29. *Chambers's Buildings and Views of Kew Gardens.* Folio; half bound, 2l. 10s.
30. *Chambers's Designs* for Chinese Buildings, &c. hf. bd. 1l. 11s. 6d.
31. *The Rudiments of Ancient Architecture*; containing an Historical Account of the Five Orders, with their Proportions, and Examples of each from Antiques; calculated for the Use of those who wish to attain a summary Knowledge of the Science of Architecture; with a Dictionary of Terms; illustrated with 11 Plates. Octavo; Boards, 8s.

*Books published by J. TAYLOR, High Holborn.*

32. *Designs for the Decoration of Rooms*, in the various Styles of modern Embellishment; with Pilasters and Friezes at large. On 26 Folio Plates, drawn and etched by G. Cooper, Draftsman and Decorator. 1l. 1s.  
Some Copies coloured according to the original Drawings, shew the full Effect of the Rooms when finished. 4l. 4s.
33. *A Collection of Designs for Modern Embellishments*, suitable to Parlours, Dining and Drawing Rooms, Folding Doors, Chimney Pieces, Varandas, Friezes, &c. By C. A. Busby, Architect. Neatly engraved on 25 Plates, 15 of which are elegantly coloured, Price 1l. 11s. 6d.

**PRACTICAL ARCHITECTURE.**

1. *Nicholson's Carpenter's New Guide*; a complete Book of Lines for Carpentry and Joinery, treating fully on Practical Geometry, Soffits, Lines for Roofs and Domes, with a great Variety of Designs for Roofs, Trussed Girders, Floors, Domes, Bridges, &c. Stair-cases and Hand-rails of various Constructions. The whole founded on true Geometrical Principles; the Theory and Practice well explained and fully exemplified on 78 Copper-plates; including some Practical Observations and Calculations on the Strength of Timber. Quarto. 15s.
2. *Nicholson's Carpenter and Joiner's Assistant*; containing Practical Rules for making all Kinds of Joints, and various Methods of Hingeing them together; for fitting up Windows and Shutters to answer various Purposes, with Rules for hanging them; for constructing Roofs in the best Manner from a given Quantity of Timber; for placing of Bond Timbers; with a new Scheme for constructing Stairs and Hand-rails, &c. &c. To which are added, Examples of various Roofs executed, with the Scantlings from actual Measurements; with Rules for Mortices and Tenons, and for fixing Iron Straps, &c. Also Extracts from M. Belidor, M. du Hamel, M. de Buffon, &c. on the Strength of Timber, with practical Observations. Illustrated with 79 Plates, and copious Explanations. Quarto. 18s. bound.
3. *Nicholson's Student's Instructor*, in drawing and working the Five Orders of Architecture. On 33 Plates, Octavo. 6s. bound.
4. *Pain's British Palladio*, 42 Plates, Folio. 16s.
5. *Pain's Carpenter and Joiner's Repository*, 69 Plates, Folio. 16s.
6. *Pain's Practical Builder*, 83 Plates, Quarto. 12s.
7. *Pain's Practical House Carpenter*; containing a great Variety of useful Designs in Carpentry and Architecture; as Centering for Groins, Niches, &c. Examples for Roofs, Sky-lights, &c. The Five Orders. Mouldings, &c. at large, with their Enrichments. Houses for Town and Country, Lodges, Stables, &c. Variety of Stair Cases, with many other important Articles and useful Embellishments. To which is added, a List of Prices for Materials and Labour, Labour only, and Day Prices. The

Books published by J. TAYLOR, High Holborn.

whole illustrated and made perfectly easy by 148 quarto Copper-plates, with Explanations. The sixth Edition, with large Additions. 18s. bound.—*N. B.* This is PAIN's last Work.

8. *The Carpenter's Pocket Directory*; containing the best Methods of framing Timbers of all Figures and Dimensions, with their several Parts; as Floors, Roofs, Spires and Domes, Trussing Girders, Partitions, and Bridges, with Abutments; Centering for Arches, Vaults, &c. cutting Stone Ceilings, Groins, &c. with their Moulds; Centres for drawing Gothic Arches, Ellipses, &c. On 24 Plates, with Explanations. By *W. Pain*. Bound, 5s.
9. *Langley's Builder's Complete Assistant, or a Library of Arts and Sciences*. Exemplified on 77 large Quarto Plates. 2 Vols. Royal Octavo. Bound, 15s.
10. *Langley's Gothic Architecture improved*, 64 Plates, Quarto. 15s.
11. *Langley's Builder's Bench Mate*, 184 Plates. 4s. 6d.
12. *Designs for Shop Fronts and Door Cases*, Quarto. 10s. 6d.
13. *Richardson's Fancy Capitals and Friezes from the Antique*. 15s.
14. *Designs for Monuments*, including Grave-Stones, Wall-Pieces, and Tombs. Quarto. 16s.
15. *Elevation and Plan of Blackfryars' Bridge*. 5s.
16. *Plans, Elevations, and Sections of the Machines and Centering used in erecting Blackfryars' Bridge*, 10s. 6d. or with the Elevation, 15s.
17. *Observations on Brick Bond*; containing an Investigation of the best Disposition of Bricks in a Wall, for procuring the greatest possible Strength, with Figures. Octavo. 12s.

#### PERSPECTIVE.

18. *Dr. Brook Taylor's Method of Perspective made easy*, both in Theory and Practice, by *J. Kirby*, with 35 Plates, large Folio. 1l. 16s. half bound.
19. *The Perspective of Architecture*, deduced from the Principles of Dr. Brook Taylor; by *J. Kirby*; with 73 Plates, large Folio. 2l. 2s. half bound.
20. *The Description and Use of a new Instrument called the Architectonic Sector*, by *J. Kirby*. 25 Plates, large Folio. 1l. 10s. half bound.

#### MECHANICS.

*In Octavo, illustrated by Fifteen large Plates, Price 10s. 6d. Boards,*

1. *A Treatise on the Teeth of Wheels, Pinions, &c.* demonstrating the best Forms which can be given them for the various Purposes of Machinery; such as Mill-work, Clock-work, &c. and the finding of their Numbers. Translated from the French of M. CAMUS, with Additions.
2. *Smeaton's Experiments on Mills, Collision of Bodies, &c.* Octavo. Five Plates. 5s.
3. *Venturi's Experimental Enquiries concerning the Motion of Fluids*. Octavo. Two Plates. 3s.
